1. Workshop: Vacation Request

A company has initiated a BPM (Business Process Management) strategy and has chosen Bizagi to support it. You have been selected to implement the Vacation Request Process.

The information about the Process and data to be controlled and visualized can be found in the following pages. Follow step by step the instructions of this manual and you will have automated the Vacation Request Process.

Description of the Vacation Request Process

The Vacation Request Process starts when an employee of the organization submits a vacation request.

Once the request is registered, it is received by the immediate supervisor; the supervisor must approve or reject the request.

If the request is rejected the application is returned to the applicant/employee who can review the rejection reasons.

If the request is approved a notification is generated to the Human Resources representative, who must complete the respective administrative procedures.

Scope

This Process focuses on controlling vacation requests of the organization, from the initial request up to its approval or rejection.

2. Defining and modelling the Process

Studio

Process modelling is the foundational step in automating a process. In Bizagi Studio, the 'Model Process' step allows you to visually diagram, model, and document business processes using BPMN (Business Process Model and Notation), an industry-standard format for process modelling that is widely accepted worldwide.

Open Bizagi Studio and click *New process*:

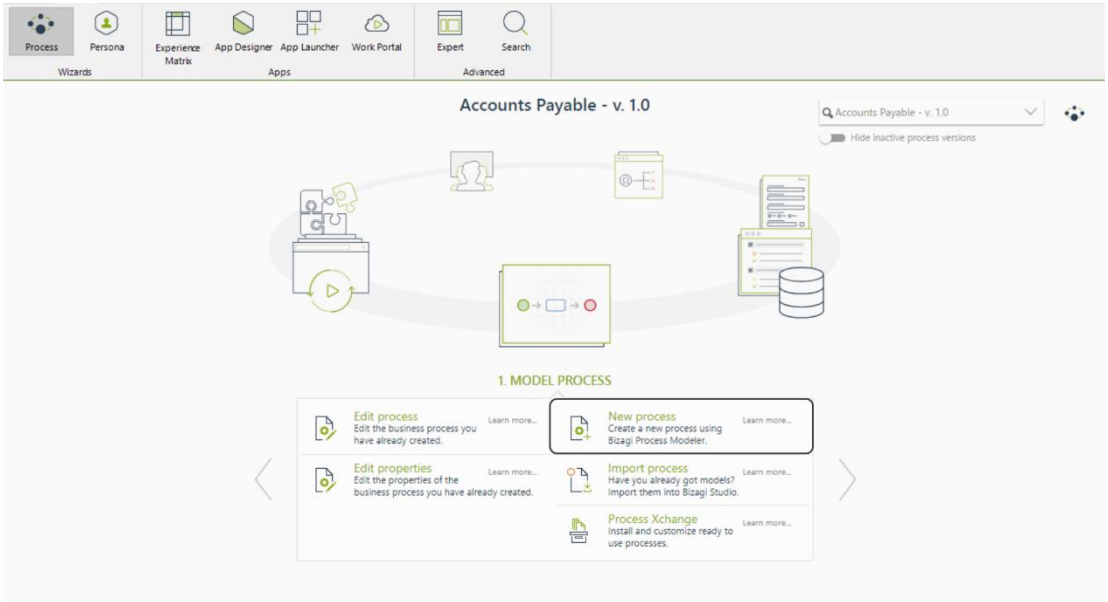

*Fig 2. Creation of a **New process** in Bizagi Studio*

The new process window will open, in the *Process Name* field type *Vacation Leave Request*.

Copyright © 2024 Bizagi

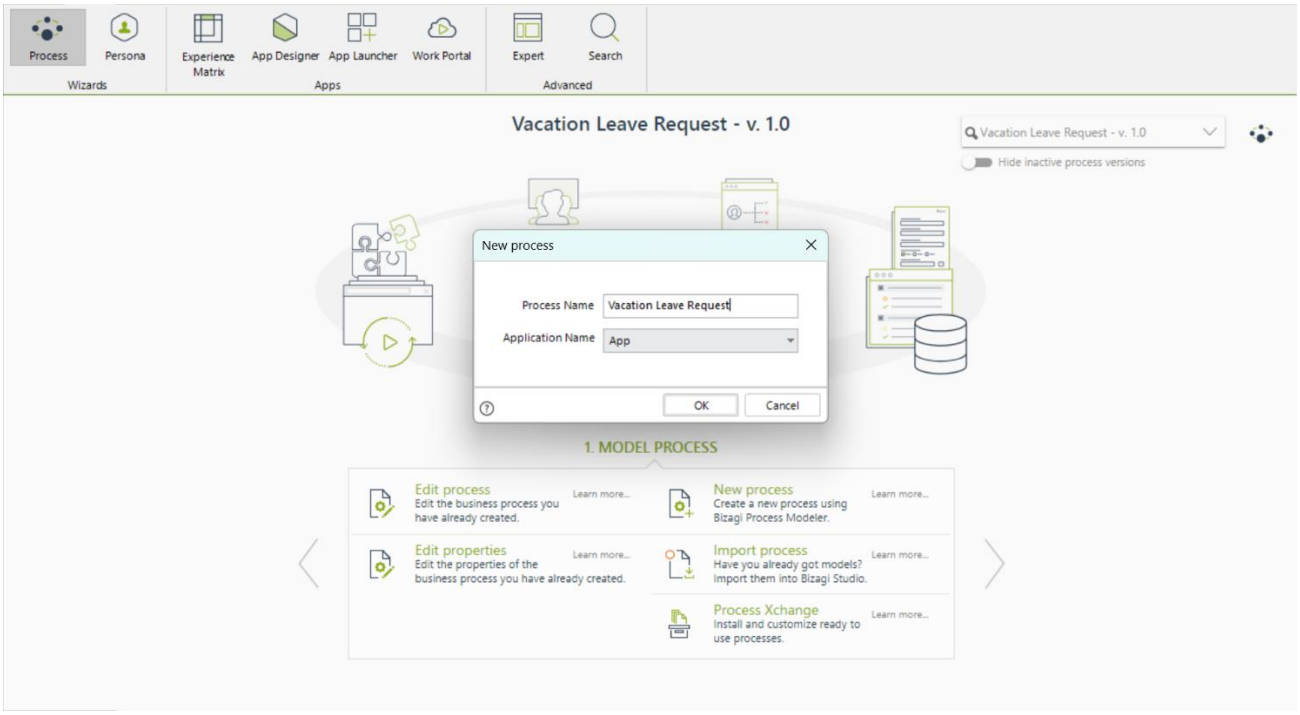

*Fig 3. Name process **Vacation Leave Request***

A Pool consisting of one Lane will load upon startup. drag and drop 3 Lanes to the Process from the Palette on the left side of the screen.

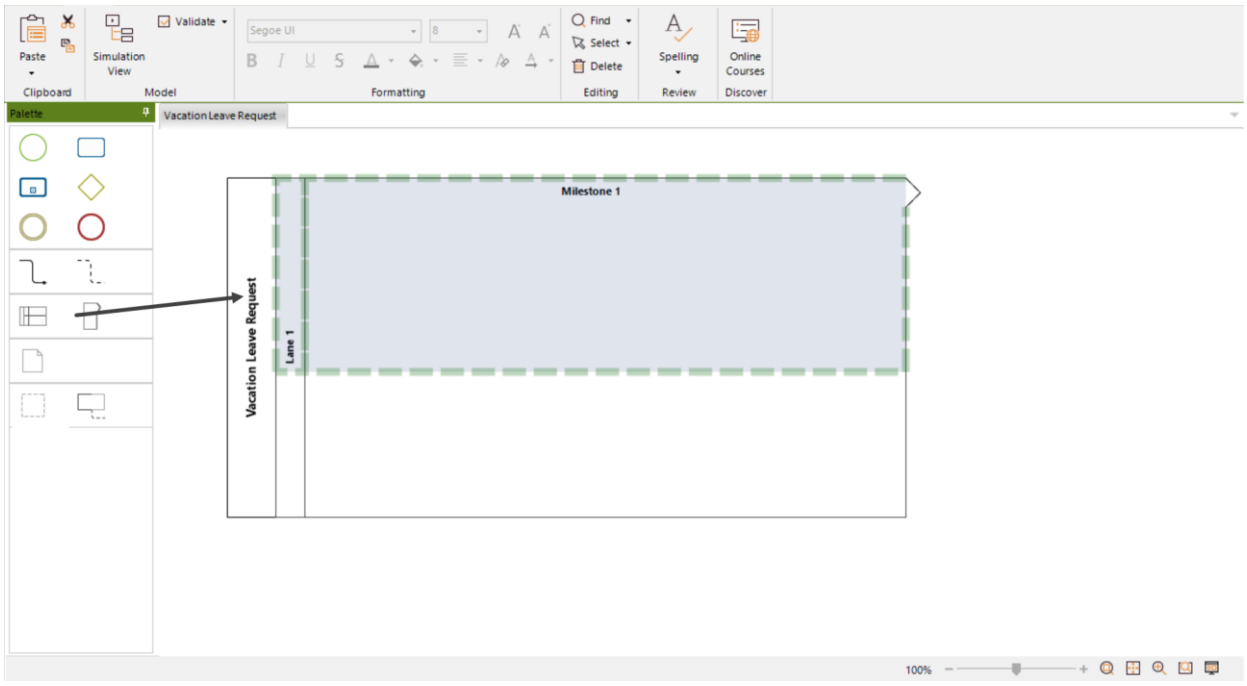

Fig. 4. Addition of Lanes to Pool.

Readjust the size of the Lanes so that you can see all the Lanes in your screen. To do this click on the lines in between Lanes and move them up or down.

Copyright © 2024 Bizagi

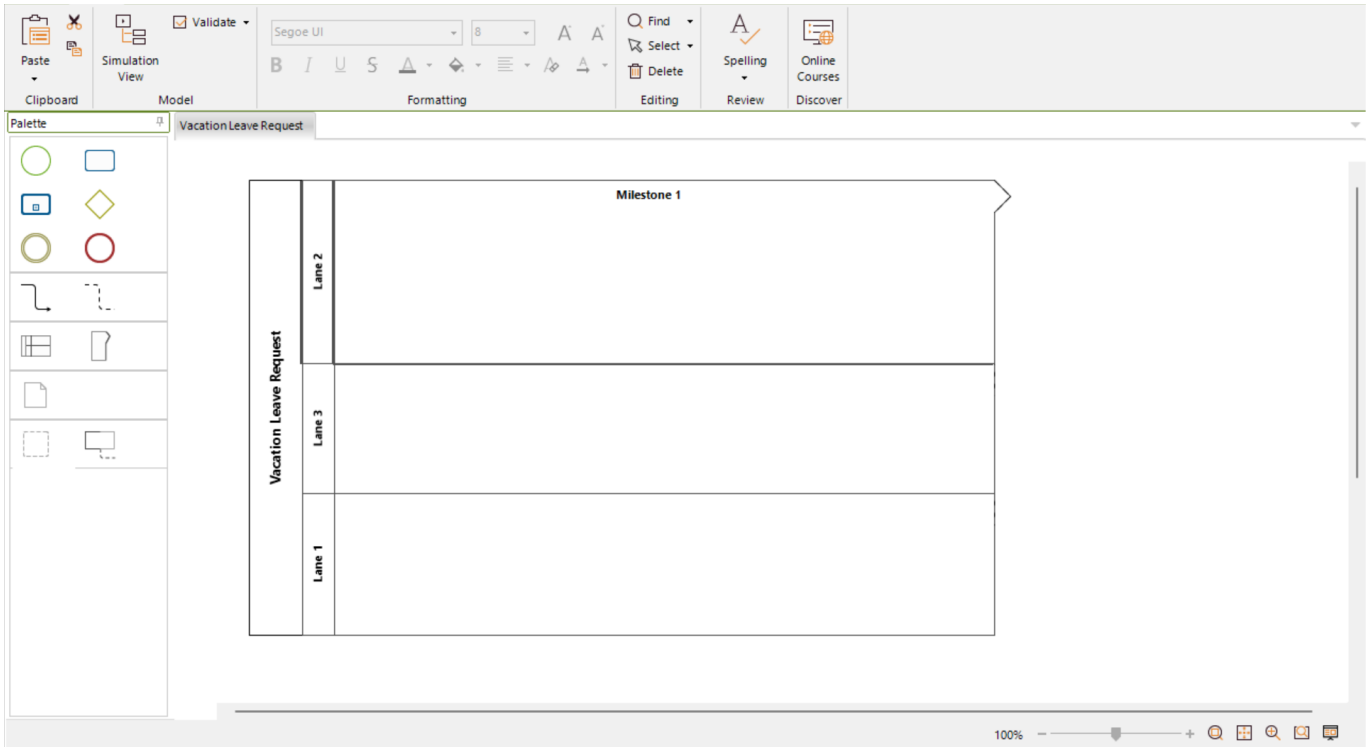

Fig. 5. Adjusting Lanes of Pool.

Rename the lanes with the following names: *Employee, Supervisor* and *Human Resources Administrator*. To rename a Lane you need to right-click the Lane and select *Edit Text*. You can also double click on the text of the Lane or click on the Lane and press F2.

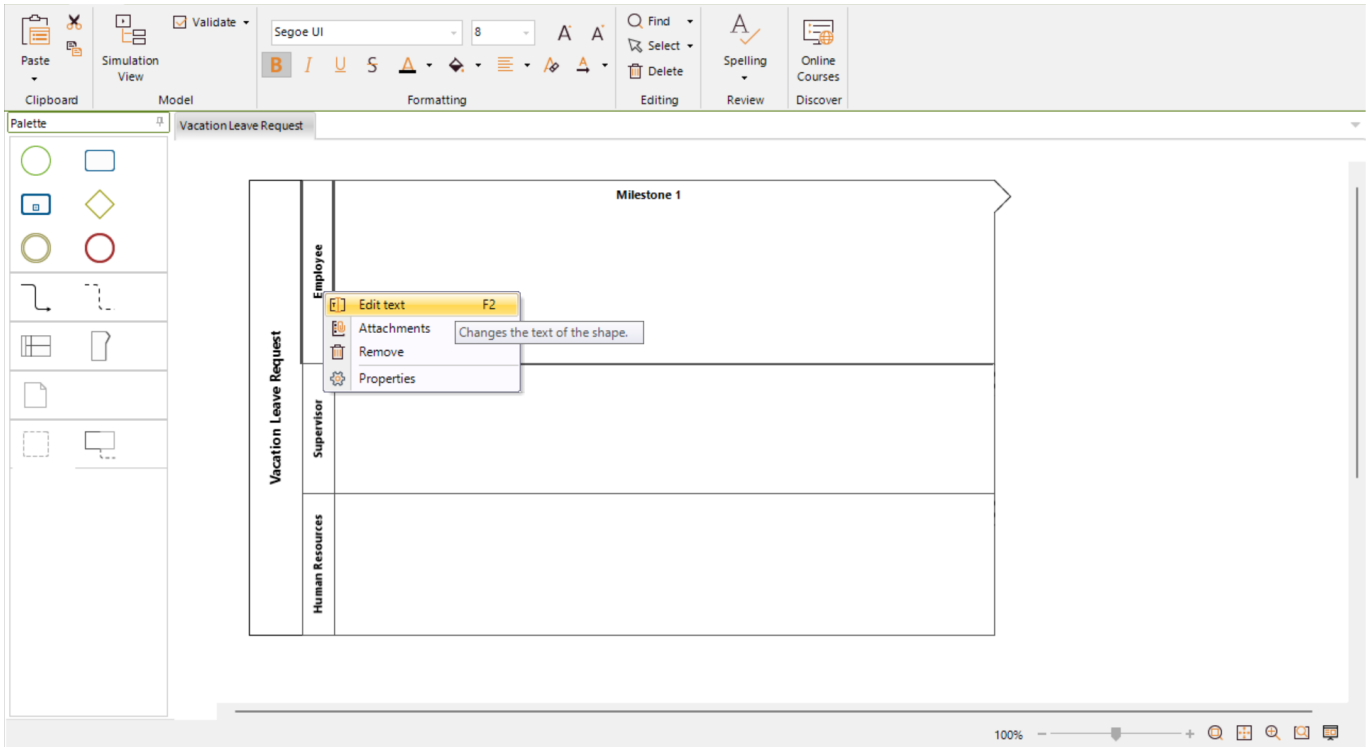

Fig. 6. Renaming Lanes of Pool.

Drag and drop a two Milestones from the Palette to add Phases.

Copyright © 2024 Bizagi

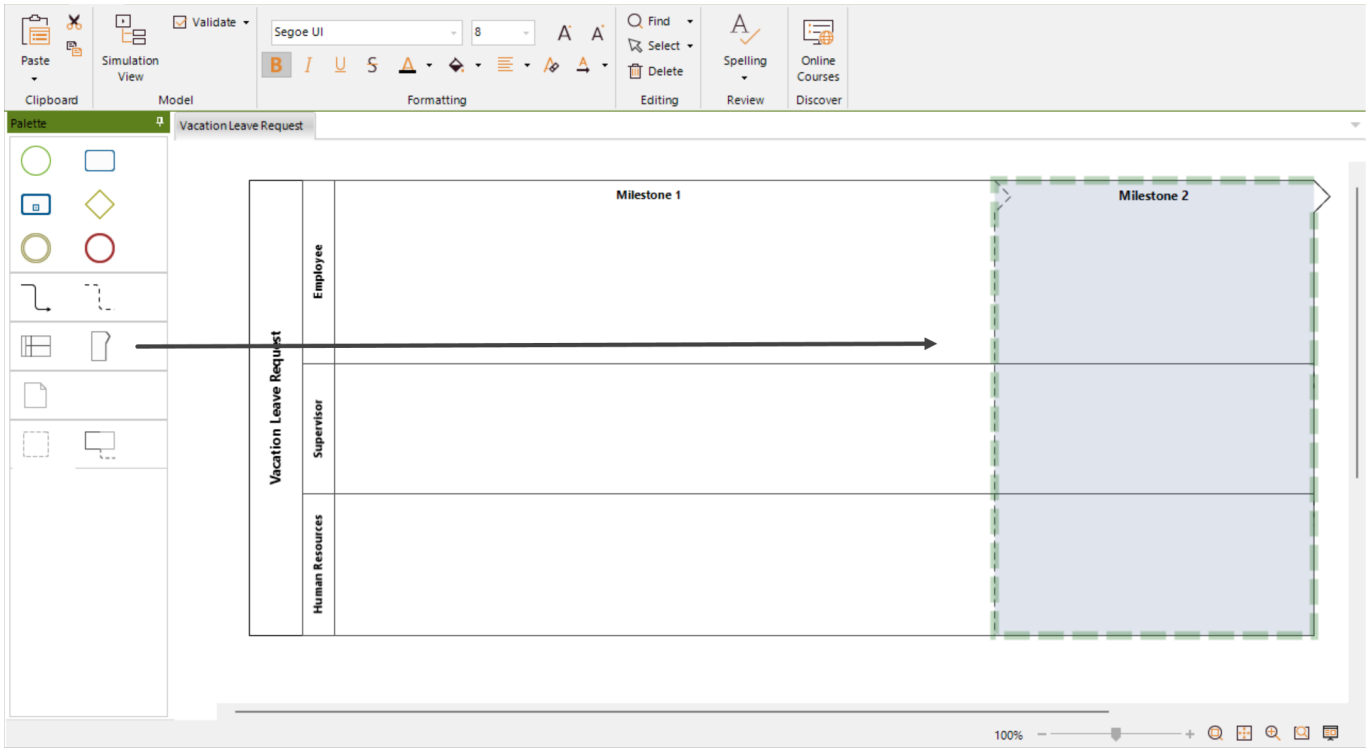

Fig. 7. Addition of Milestones to Process.

Rename the Phases; double-click the Milestone or click on the Milestone and press F2, change the name of the first Phase to *Register* and the second to *Approval*.

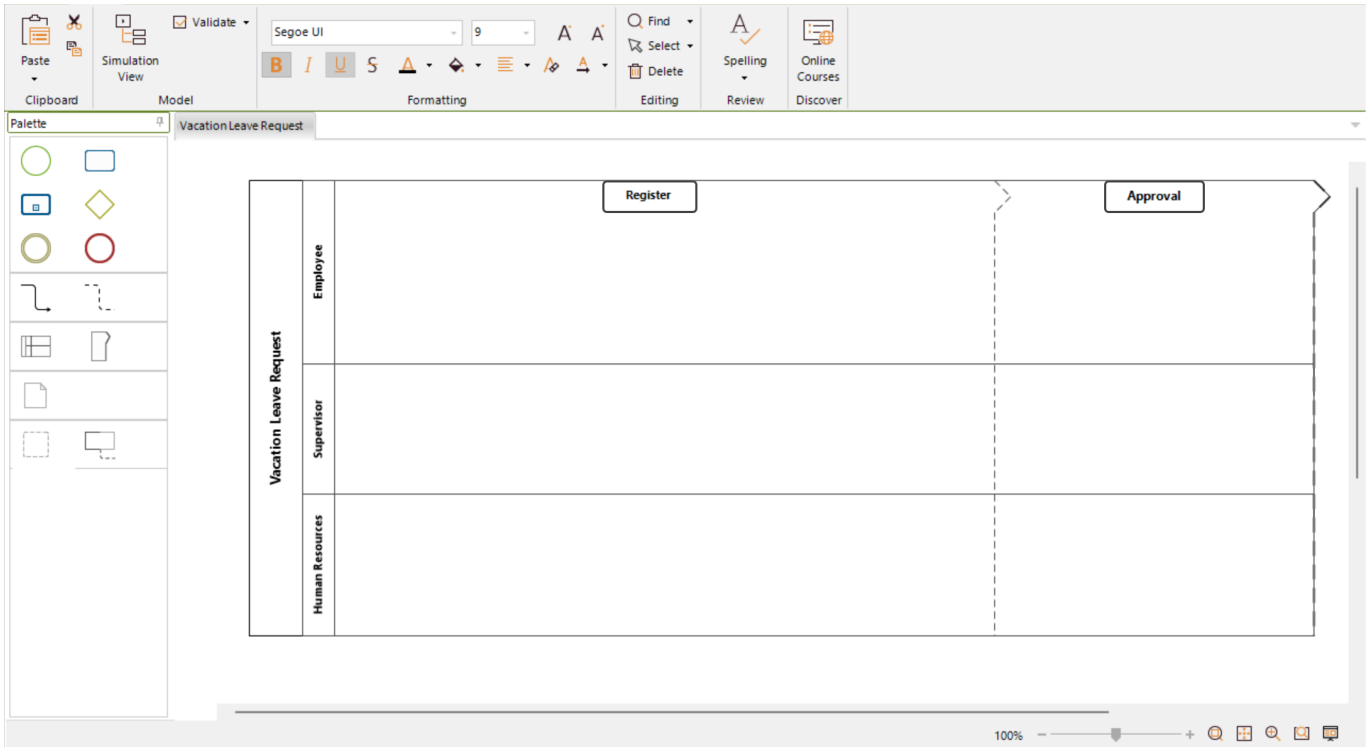

Fig. 8. Edition of the name of the Milestones.

Now we will start to add shapes to our Process. Select the Start Event from the Palette and drop it at the start of the *Employee* Lane.

Copyright © 2024 Bizagi

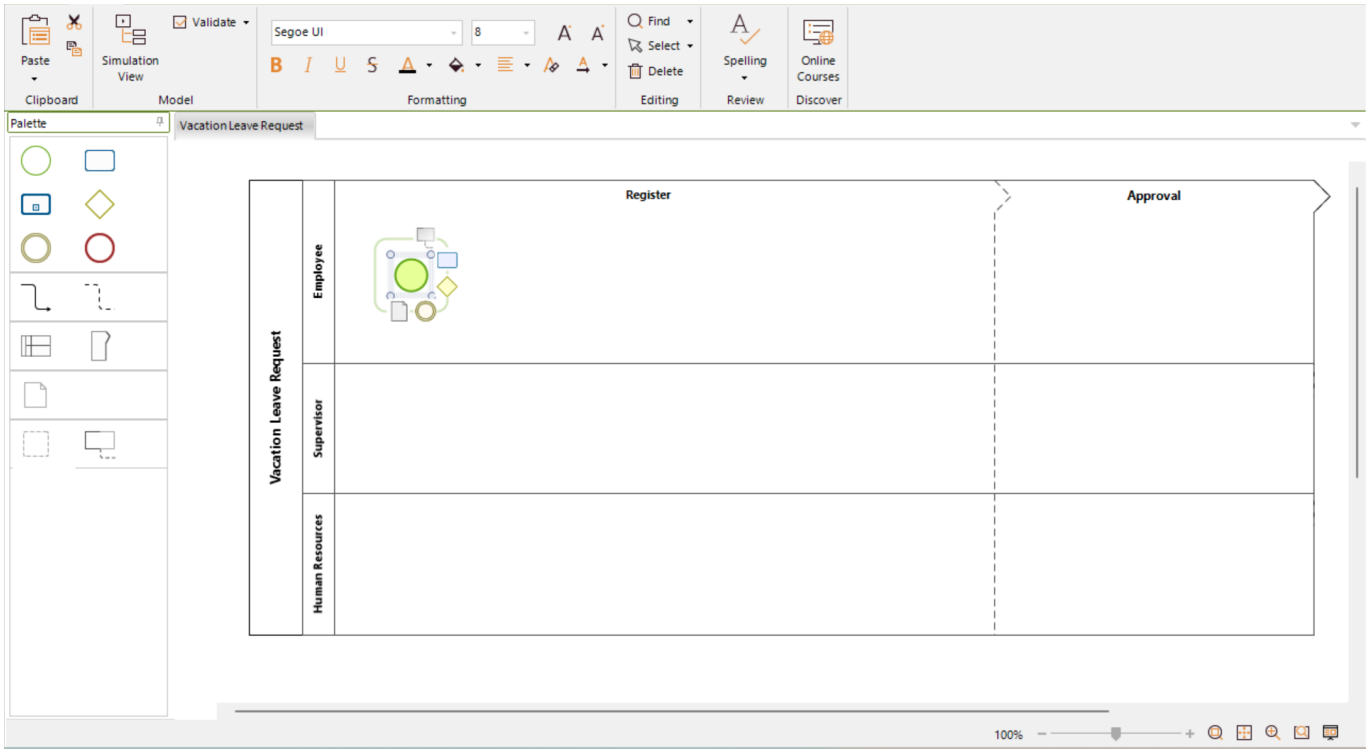

Fig. 9. Addition of the Start Event.

The figures have a Pie Menu that allows Shapes to be easily included in the diagram. It is displayed when you first put the Shape on the process or when you click on a Shape.

Fig. 10. Pie menu.

Select the Task Shape from the Pie Menu and place it next to the Start Shape.

Rename the new task to *Register Leave Request*. You can rename the Shapes when you first create them or by double-clicking them.

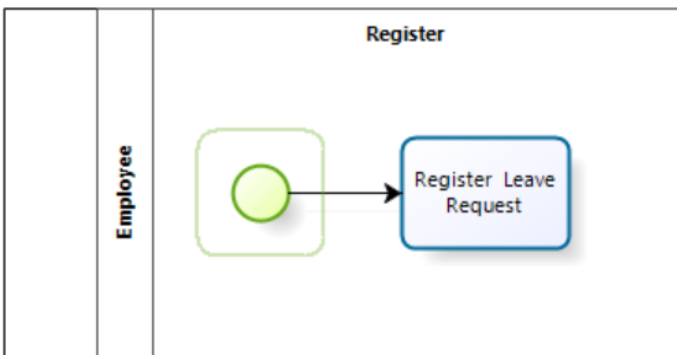

Fig. 11. Task creation.

Copyright © 2024 Bizagi

Important:

*All transitions must be properly connected, and all the Shapes must be inside Phases and Functional Areas.

Add the remaining Shapes until the diagram looks like the following.

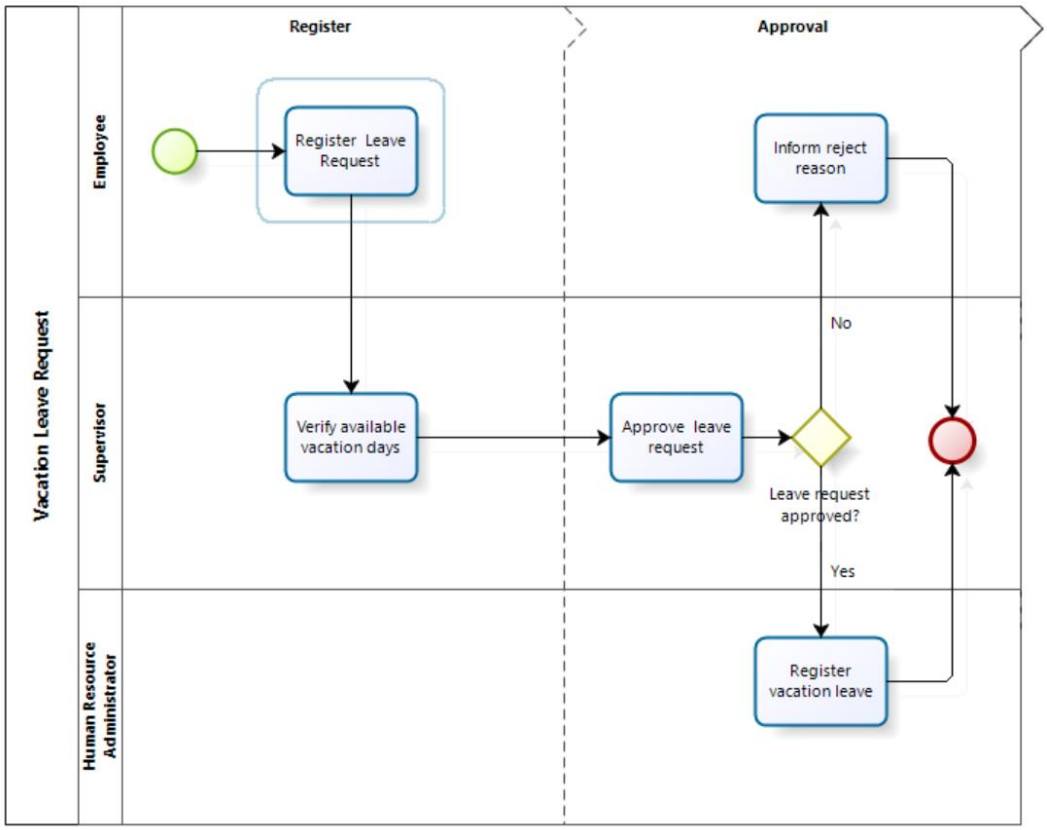

Fig. 12. Vacation Request Process.

Right-click the *Verify available vacation days* Activity and transform it to a Service Task.

Copyright © 2024 Bizagi

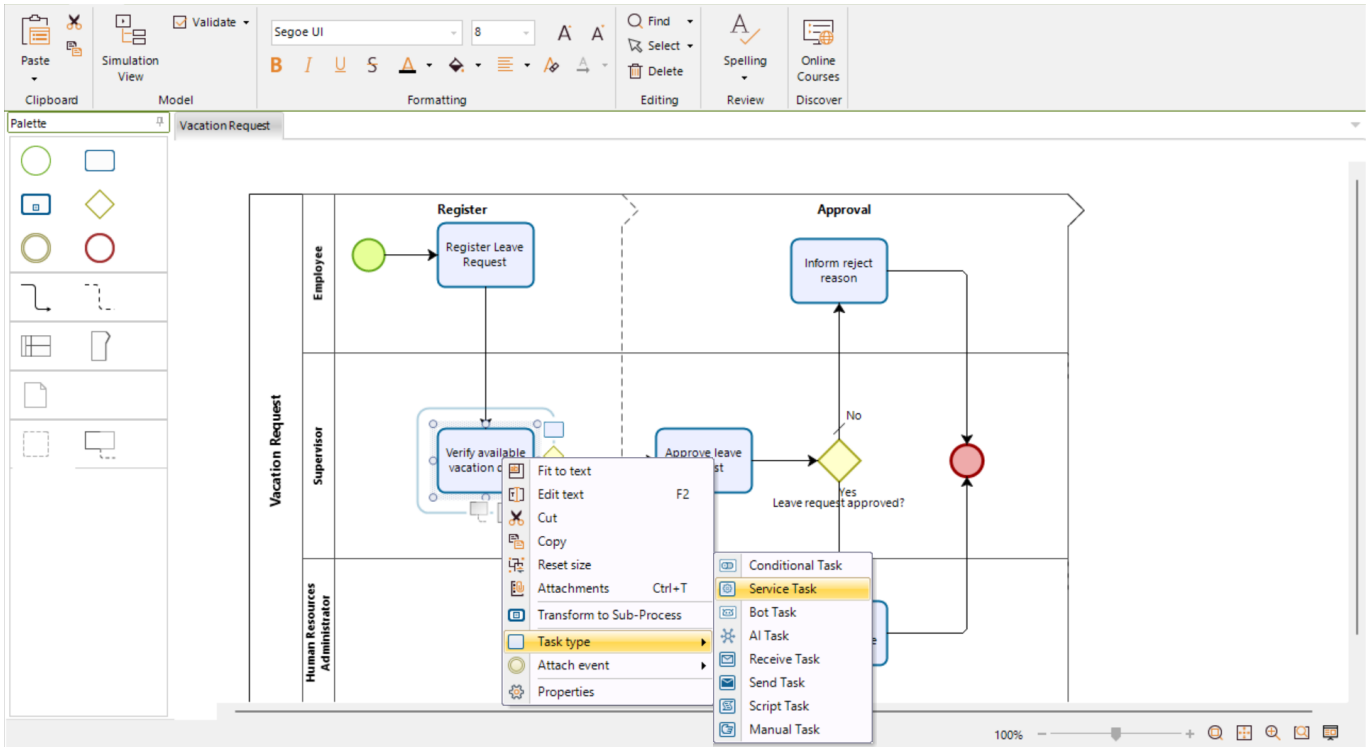

Fig. 13. Task transformation to Service Task.

Now you need to configure three things:

- Durations
- Descriptions
- Help texts

To do this right-click the Process name inside the diagram and select *Properties.*

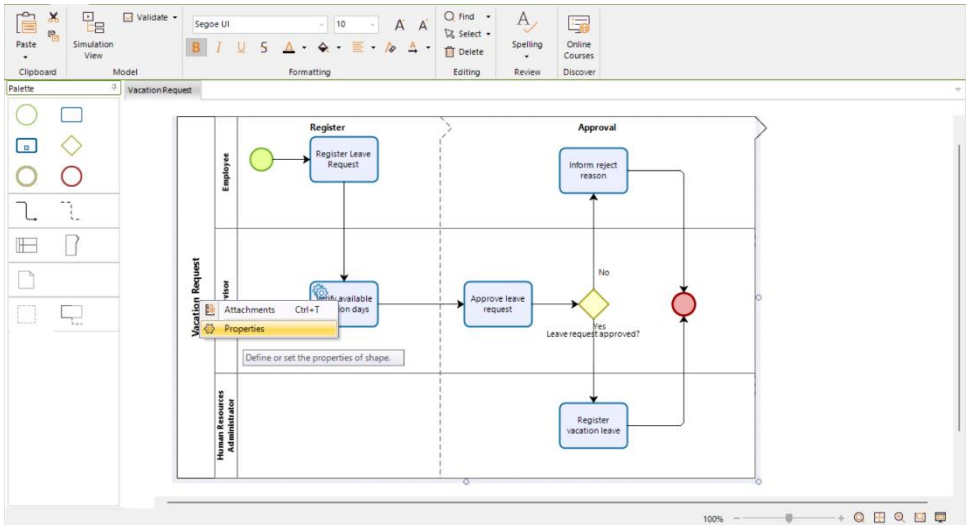

Fig. 14. Selection of diagram Properties.

A column will appear on the right-hand side. Enter the following as the *Description* of the Process: "This process controls the vacation requests of the employees of the company."

Copyright © 2024 Bizagi

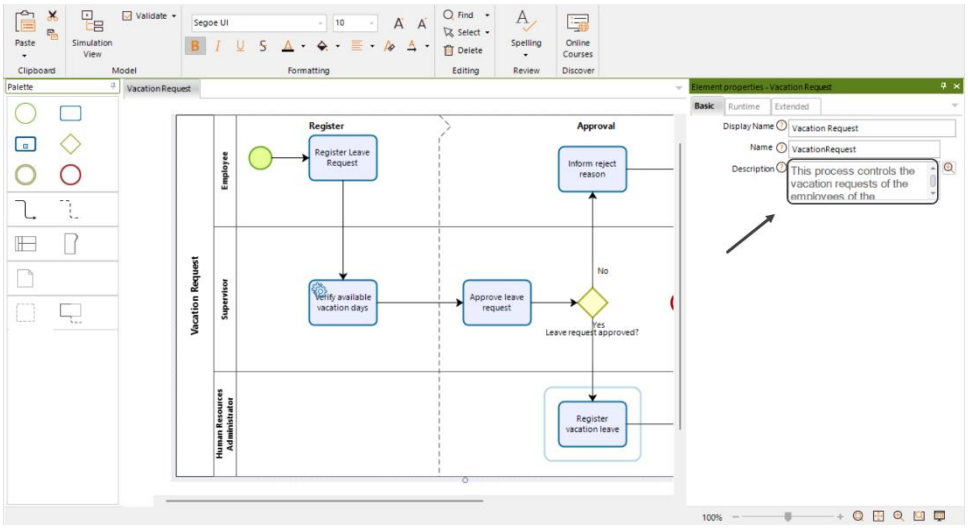

Fig. 15. Edition of the Description of the diagram.

Located beside the *Basic* tab is the *Runtime* tab. Within this tab, you will specify the duration parameters for the process. Provide values for the estimated duration, lower limit, and upper limit. These durations are meant to comply with the Service Level Agreement (SLA) of your process. Note that the first dropdown menu for the time parameters corresponds to hours, while the second dropdown menu corresponds to minutes.

For this exercise, set the durations to 72 hours for the estimated time, 24 hours for the lower limit, and 96 hours for the upper limit. Once done, close the Properties window by clicking the "X" icon in the top right corner.

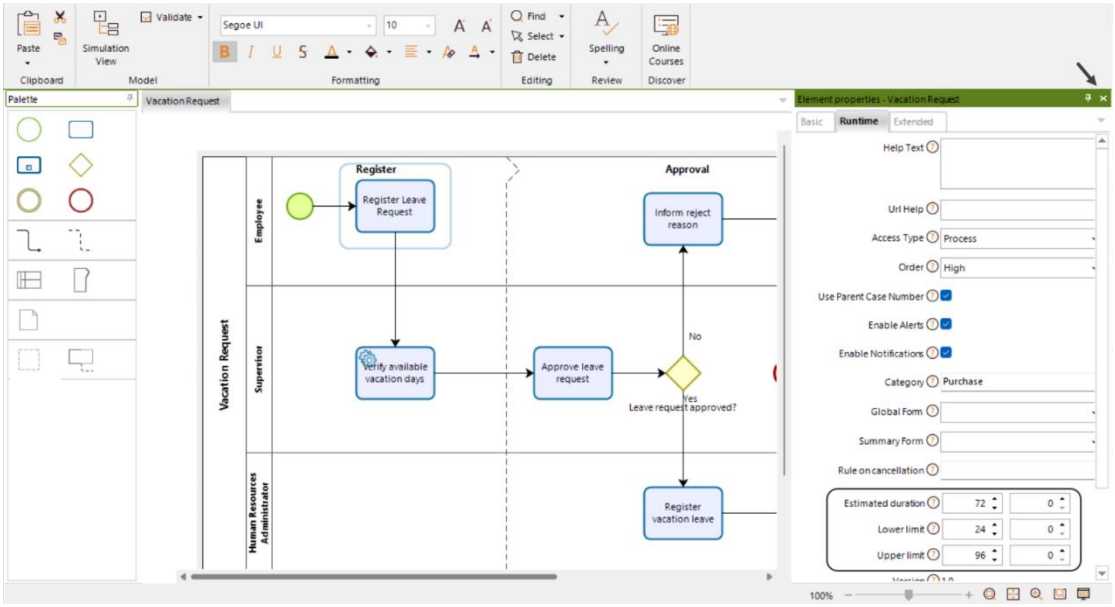

Fig. 16. Edition of the times of the Process.

Right-click *Register Leave Request* Activity and select *Properties*.

Copyright © 2024 Bizagi

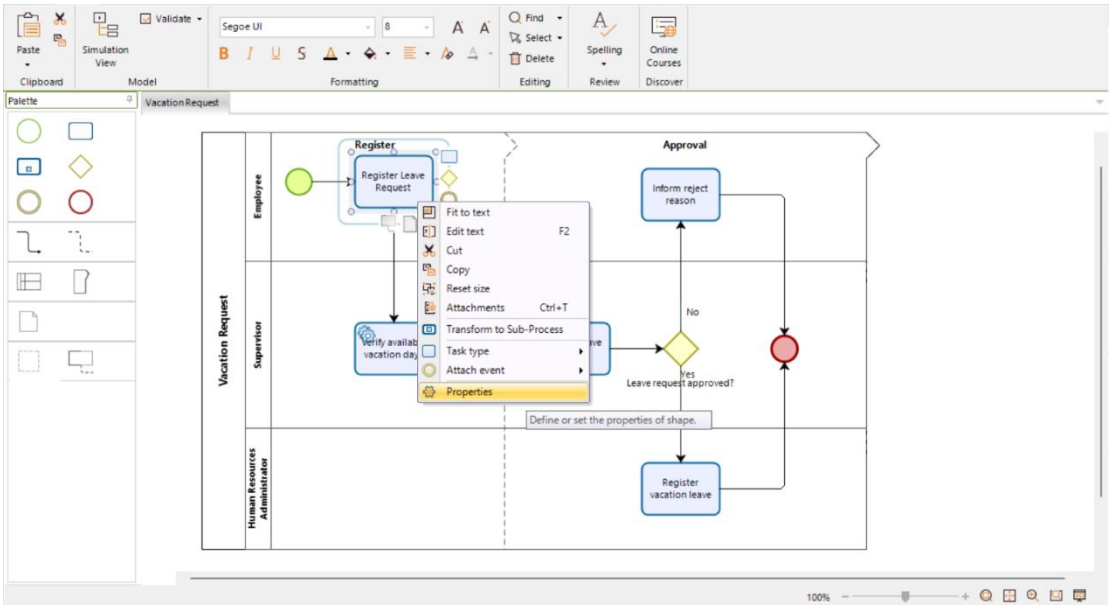

*Fig. 17. Edition of the **Register Leave Request** Activity.*

The Element properties column will appear, switch to the *Basic* tab, and enter the following *Description*: "This Activity allows the employee to enter the vacation request details."

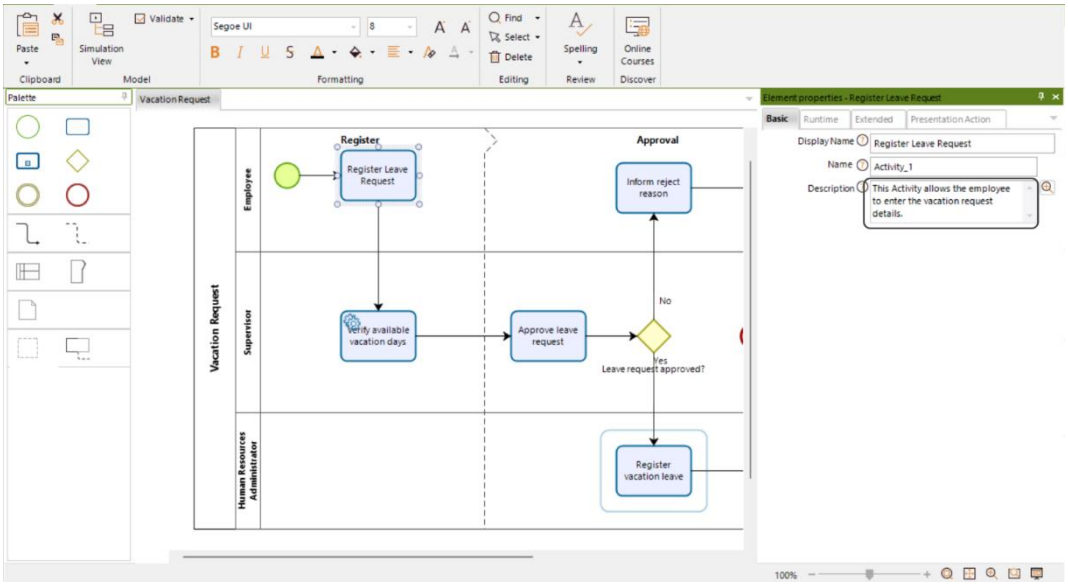

*Fig. 18. Edition of the **Register Leave Request** description.*

Switch to the *Runtime* tab and enter the following in the Help Text: "Include all the information in your vacation request.". The Help Text will be displayed to the end user when the Activity is executed in the Work Portal.

In the same tab enter the time as shown below. Then, close the properties window of the Activity.

Copyright © 2024 Bizagi

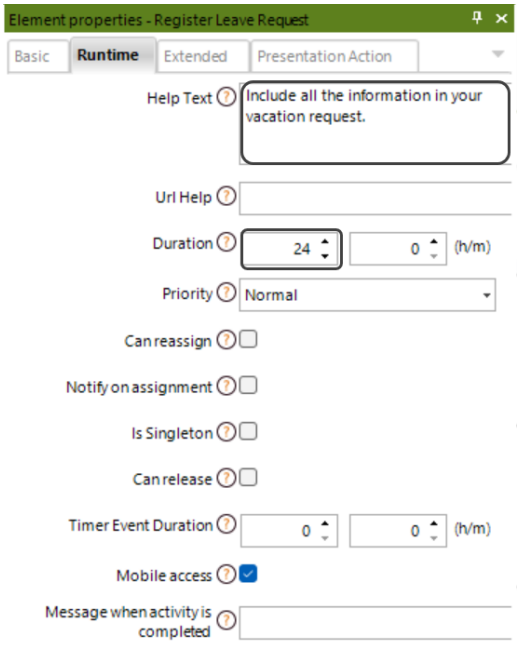

*Fig. 19. Edition of the Help Text and Duration of the **Register Leave Request** Activity.*

Configure the following properties for each User Activity:

Table 1. Properties of each User Activity.

Activity	Help Text	Duration
Approve leave request		48 hours
Inform reject reason	Review the reasons for request rejection.	72 hours
Register vacation leave	Post the event into the payroll system.	72 hours

Express the days in hours, for example: 2 days = 48 hours

Once you are finished, **Save** your changes and close the Process Modeler Suite.

When you close the Process Modeler, you will return to Bizagi Studio and be taken to the Process Wizard. The Wizard guides you through all the necessary steps to automate your Process.

Process data

Next, we'll proceed with creating the data model. In Bizagi, the data model encompasses all the information required by the automated process for display in the Work Portal and for collecting inputs from end users.

The Vacation Leave Request Process includes the following information:

- Request date
- Employee
- Vacation start date
- Vacation end date
- Number of business days requested
- Number of available days
- Supervisor
- Flag (yes/no) for approved vacations
- Rejection reason
- Payroll code
- Administrative task date

All the information about the request such as dates, number of business days requested, and available days will be grouped in the entity Vacation Request.

A standardized list about the possible rejection reasons will be designed in the entity Rejected Reason.

1. Go to the second step of the Process Wizard and select Model Data:

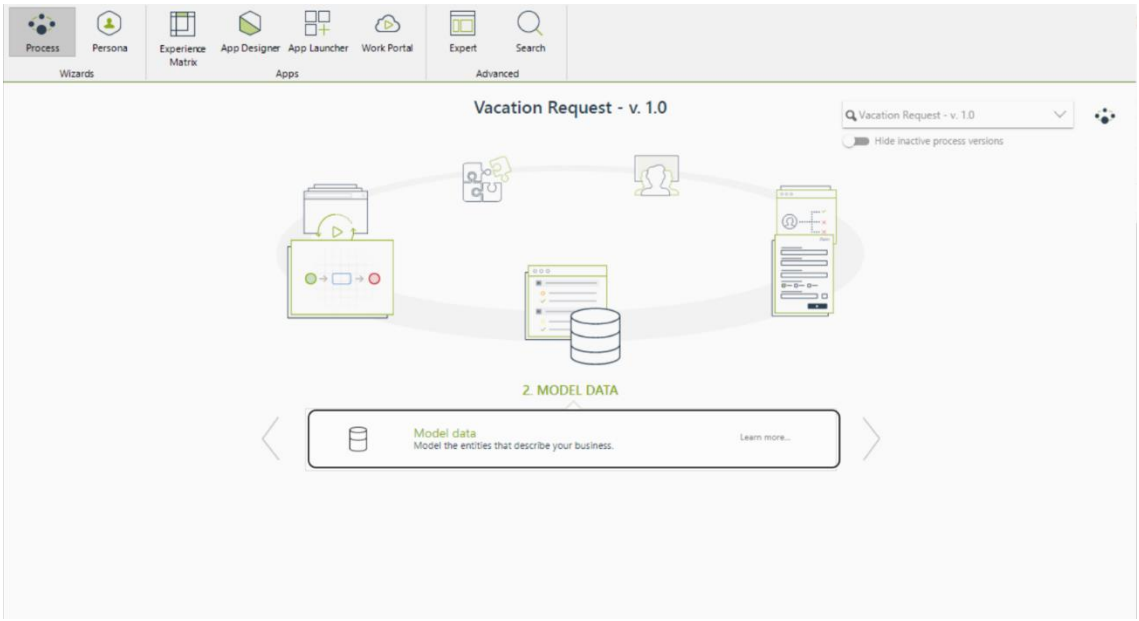

Fig. 21. Process Wizard – Model data.

2. A new window will appear. Enter the Process Entity, acts as the starting point and provides access to the entire data model. Name it 'VacationLeaveRequest' and click OK.

Copyright © 2024 Bizagi

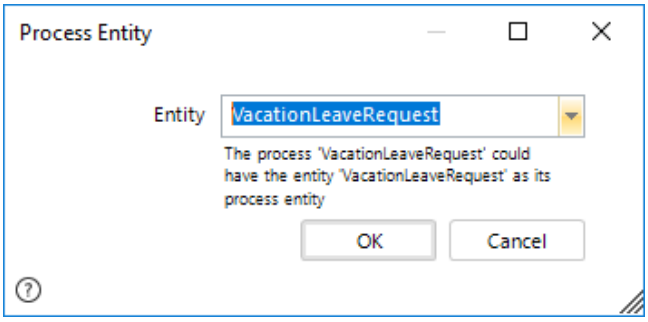

Fig. 22. Process Entity declaration.

3. A new window to design the data model, containing the Process Entity will appear. The creation of entities, attributes, and relationships can be completed in this editor.

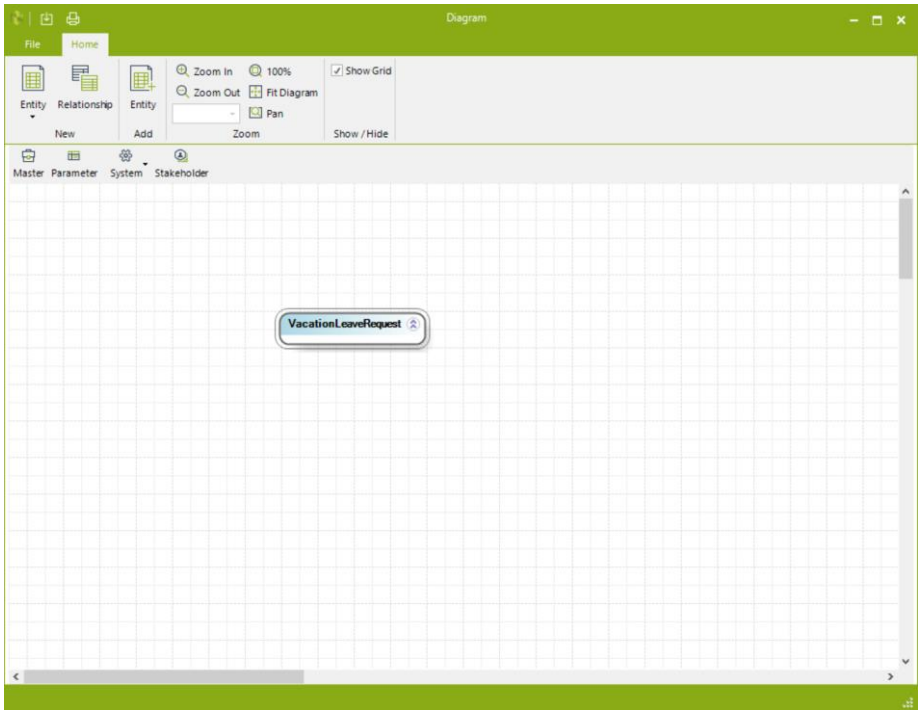

Fig. 23. Data model window.

4. Right-click the Vacation Request entity and select Edit Attribute List.

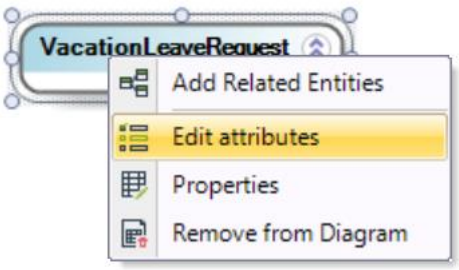

Fig. 24. Edition attributes VacationLeaveRequest Entity.

Copyright © 2024 Bizagi

5. The Attribute List Window for the Vacation Request entity is displayed. Click the **Add** button to create attributes. For each new attribute, complete the following information:
    - Display Name: This is name presented to the end user. It does not allow special characters.
    - Name: This field will be automatically filled in by the system and will be used for Business Rules.
    - Type: This is the data type of the attribute.
    - Length: Applies for Strings; it determines the maximum length of characters the end user can input in the field.

    Create the following attributes:

Table 2. Attributes of VacationLeaveRequest Entity.

Display Name	Type	Length
Request date	Date - Time	None
Start date	Date - Time	None
End date	Date - Time	None
Business days requested	Integer	None
Available days	Integer	None
Approved?	Boolean	None
Rejection comments	String	100
Payroll code	String	20
Administrative task date	Date - Time	None

6. The attribute list for the Vacation Request entity should resemble the illustration in the following image. Note that you will need to click on 'Show advanced options' to adjust the length of a String.

Copyright © 2024 Bizagi

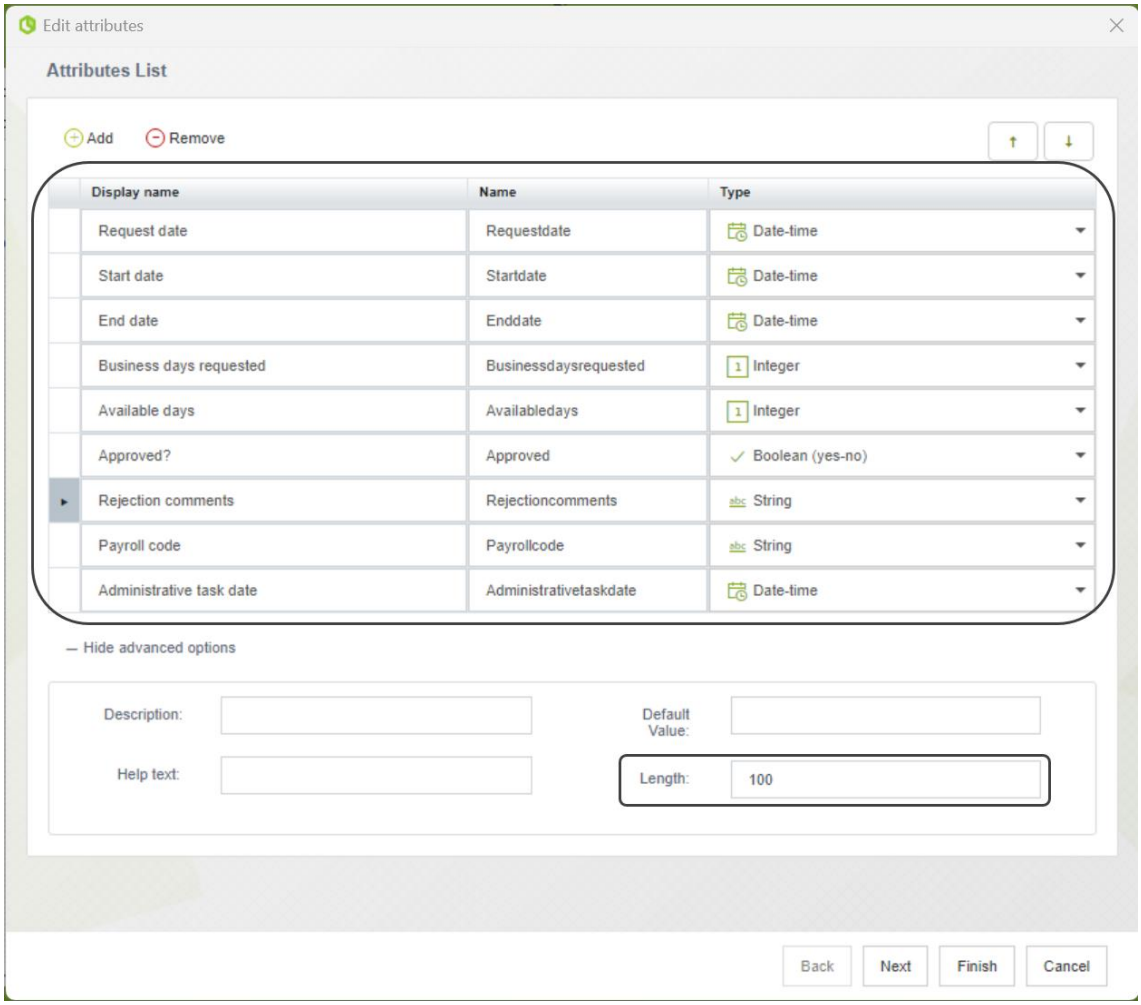

Fig. 25. Addition of attributes in VacationLeaveRequest Entity.

7. After you have created the basic attributes, proceed to create the attributes related to other entities.

Copyright © 2024 Bizagi

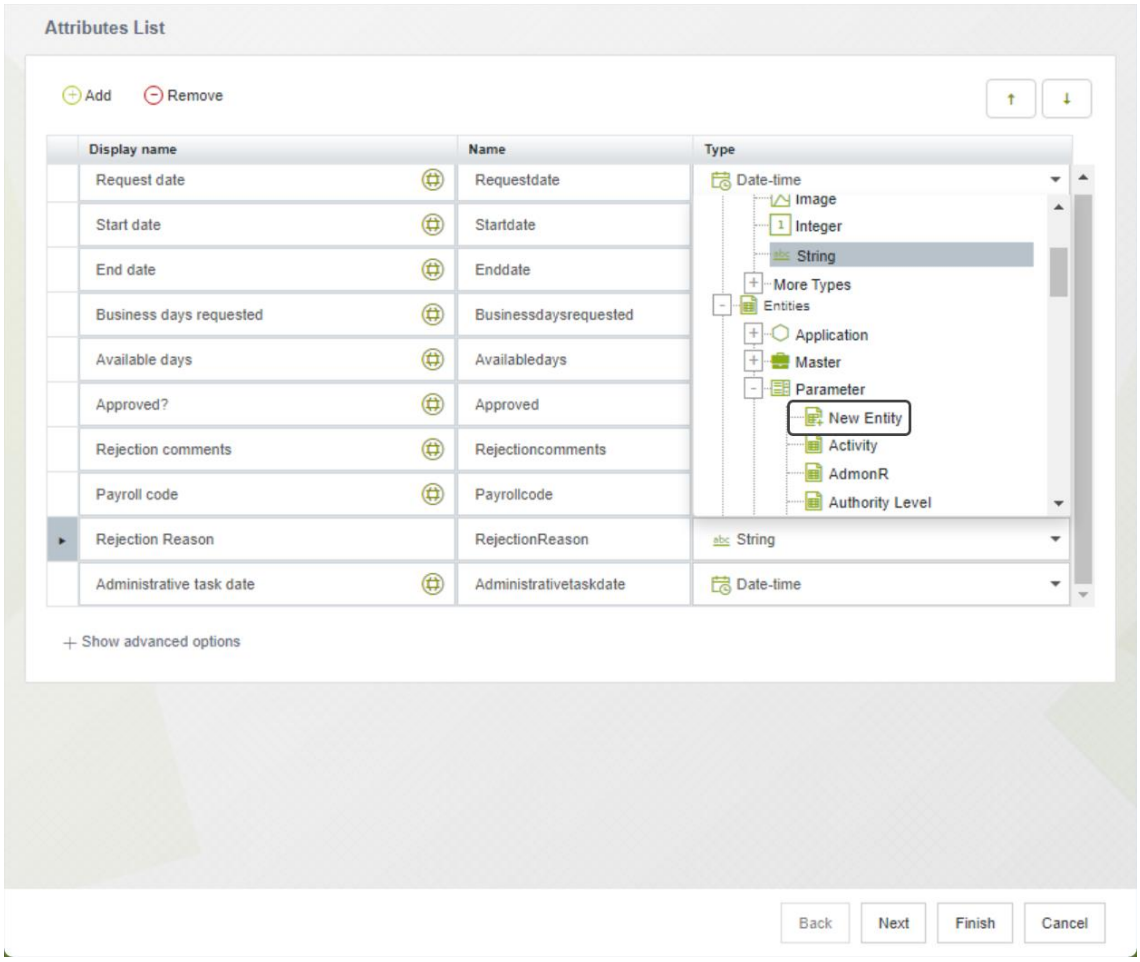

Fig. 26. Addition of Entity attribute in VacationLeaveRequest Entity.

Create the Rejection Reason Entity as a Parameter Entity, which requires its own attributes. To begin, select the *New Entity* option. A new window will appear, allowing you to create the Entity and its attributes.

Our new entity will have the following information automatically:

- Display Name: Name that will be displayed in the form to the end user; this field does not allow special characters. It is going to be set to *Rejection Reason*.
- Type: *Parameter*

Copyright © 2024 Bizagi

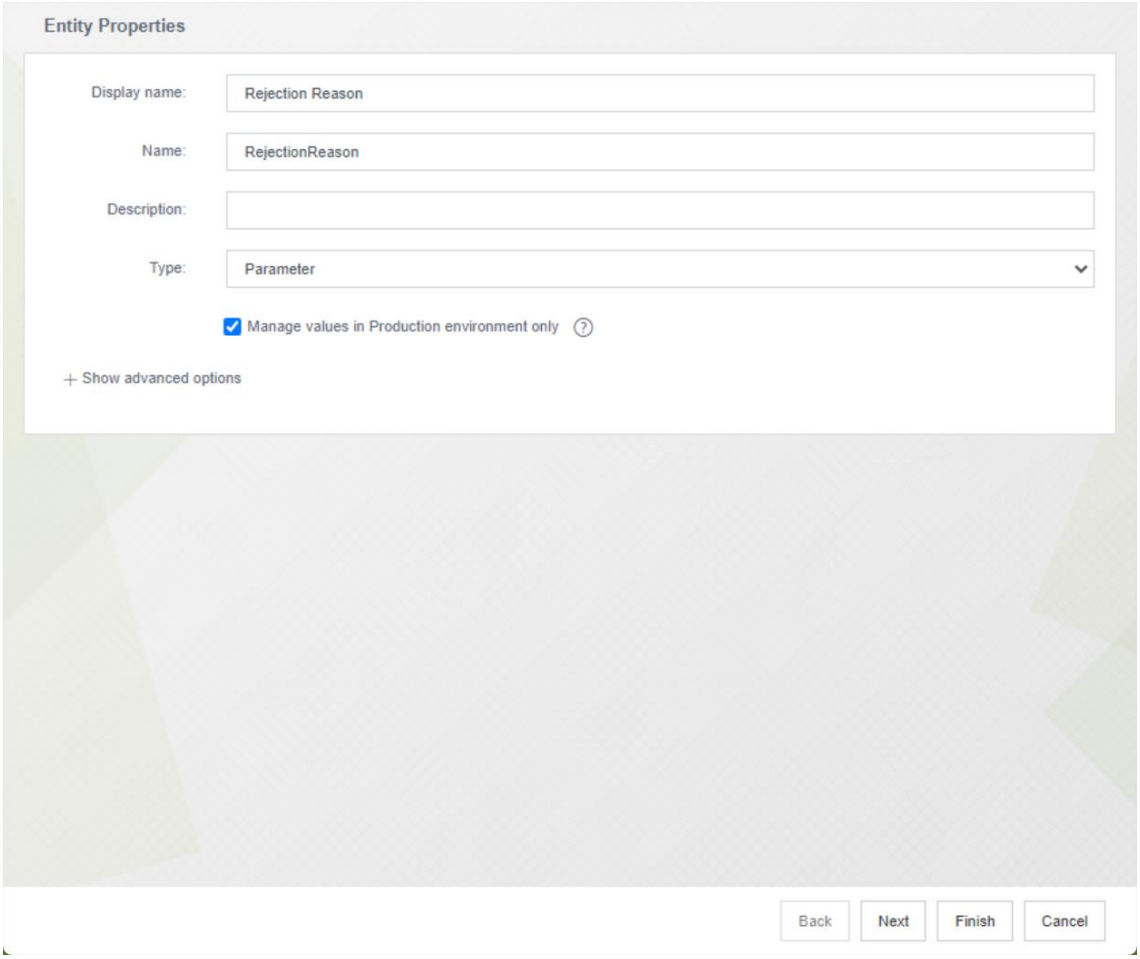

Fig. 27. Entity Properties window.

The user must define if the entity's values will be managed in the Production Environment by end users, via the Work Portal. If not, the entity's information will remain hidden for end users. In this case Rejection Reason will be manageable in the Production Environment because its values do not determine the Process flow. They are just shown for informative reasons.

Click **Next**.

8. The following window allows for the creation of attributes. This Entity will have one attribute, 'Rejection Reason X', where the list of reasons to reject a request will be stored. (The reason for using 'Rejection Reason X' instead of just 'Rejection Reason' is because an attribute cannot have the same name as its parent Entity)

Table 3. Attributes of RejectionReason Entity.

Display Name	Type	Length
Rejection reason X	String	100

Copyright © 2024 Bizagi

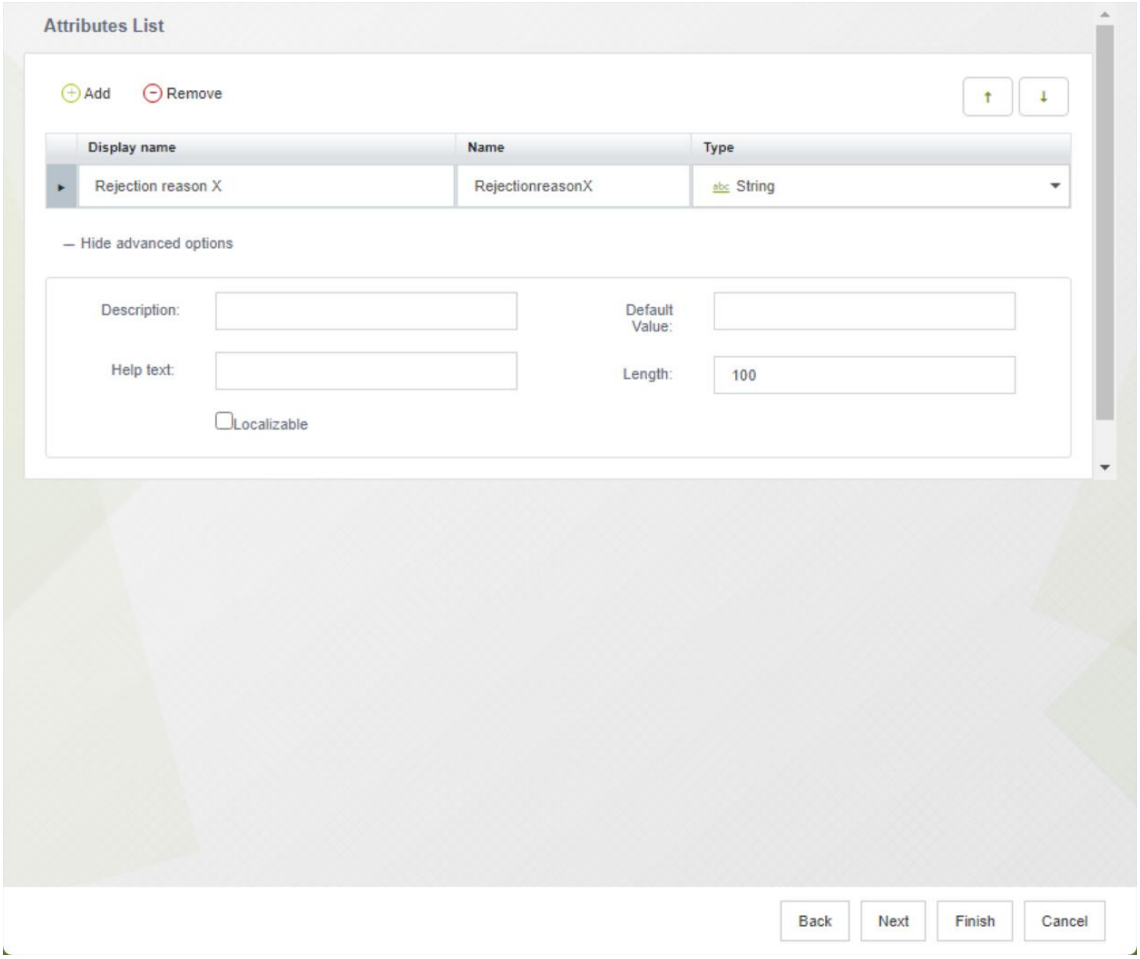

Fig. 28. RejectionReason Entity attribute creation.

Click **Next**.

9. Enter a Display Attribute for the Entity. The Display Attribute is the visible attribute created for the Entity that will be shown in the Work Portal when the Entity is referred to. Select the one you just created.

Copyright © 2024 Bizagi

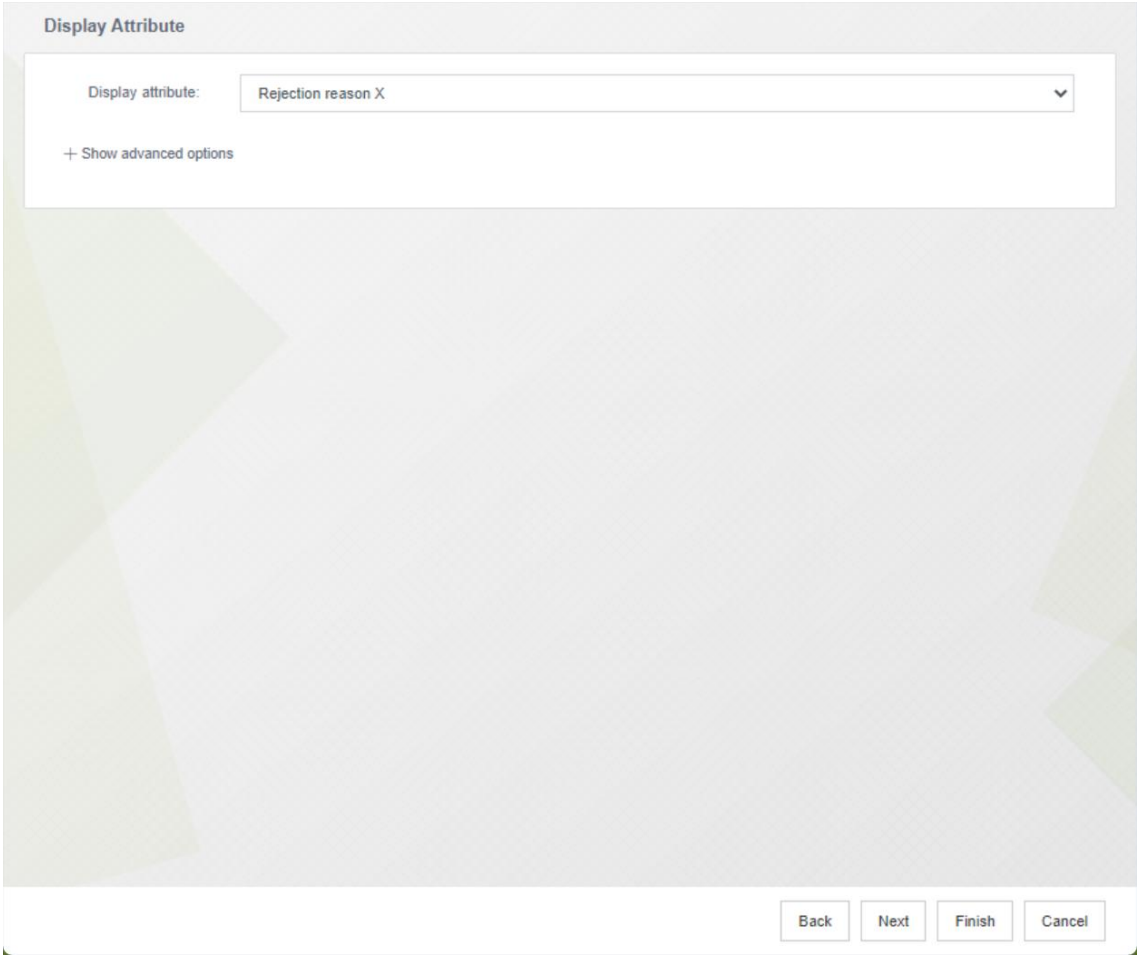

Fig. 29. Declaration of the Display Attribute for the RejectionReason Entity.

Click **Next**.

10. A Summary window appears. Click **Finish** to return to the attribute list of the entity *VacationLeaveRequest*.

Copyright © 2024 Bizagi

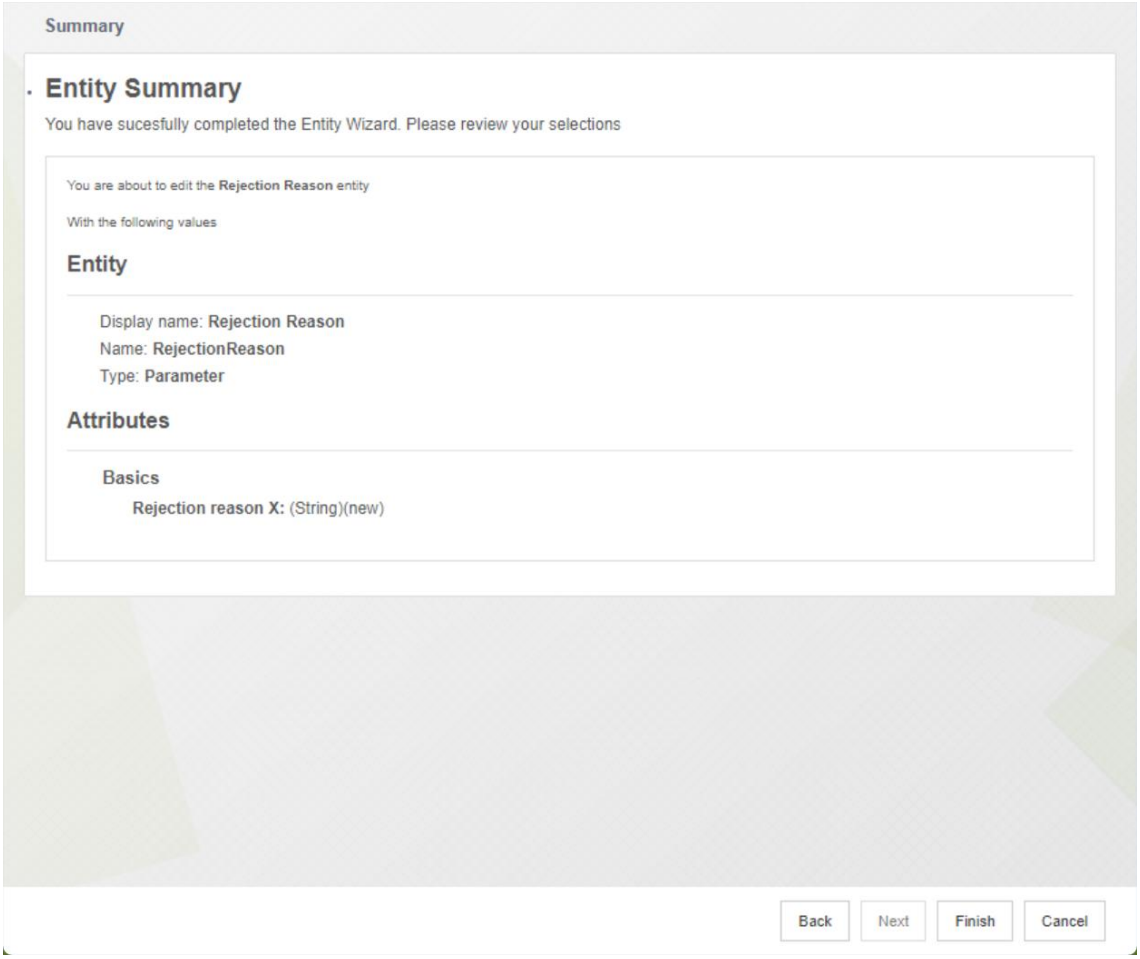

Fig. 30. RejectionReason Entity summary.

The Entity *VacationLeaveRequest* is also related to a user Entity known in Bizagi as *WFUser (Workflow User)*. *WFUser* is created by default for all projects and is used to store all the information related to end users. Since *WFUser* is already created by default, we just need to establish a relationship. Press the 'Add' button and establish a relationship between 'Employee' and the SYSTEM entity. You can find the WFUSER table under the 'Entity' option and then the 'System' sub-option." Click **Next**.

Copyright © 2024 Bizagi

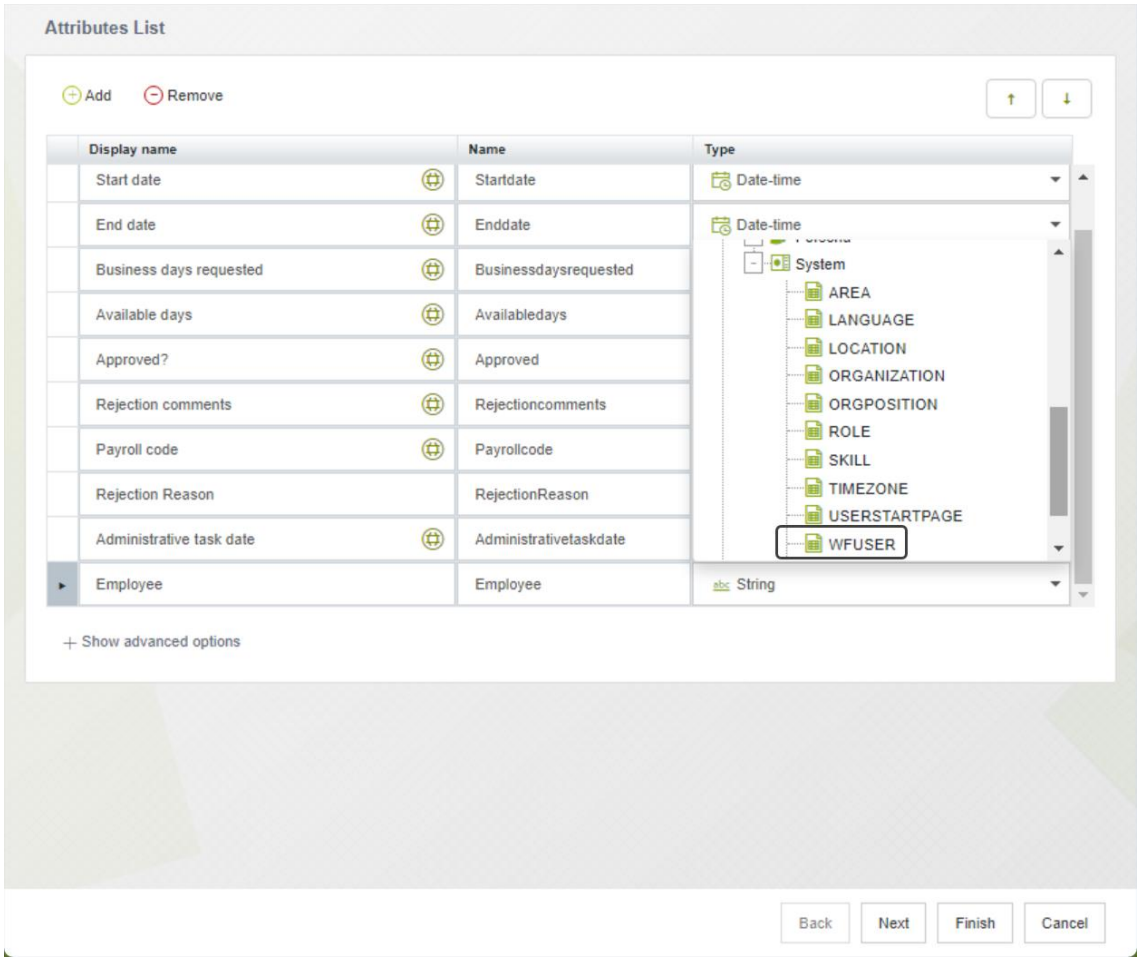

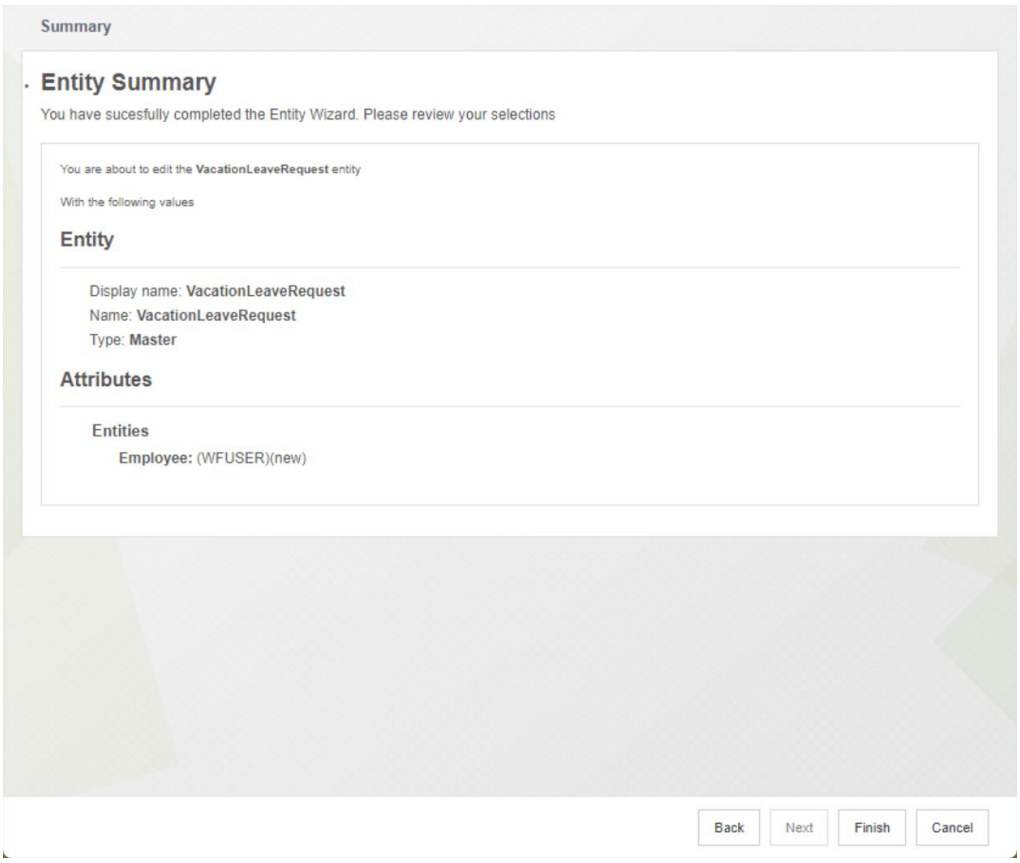

Fig. 31. Addition of Employee as a WFUser System Entity Type.

11. Click **Next**. A Summary window pops-up for the *VacationLeaveRequest* entity.

Copyright © 2024 Bizagi

Fig. 32. VacationLeaveRequest Entity summary.

12. Click **Finish**. The data model is now complete and presented graphically. You may need to reposition the entities on the screen by dragging them to the desired position.

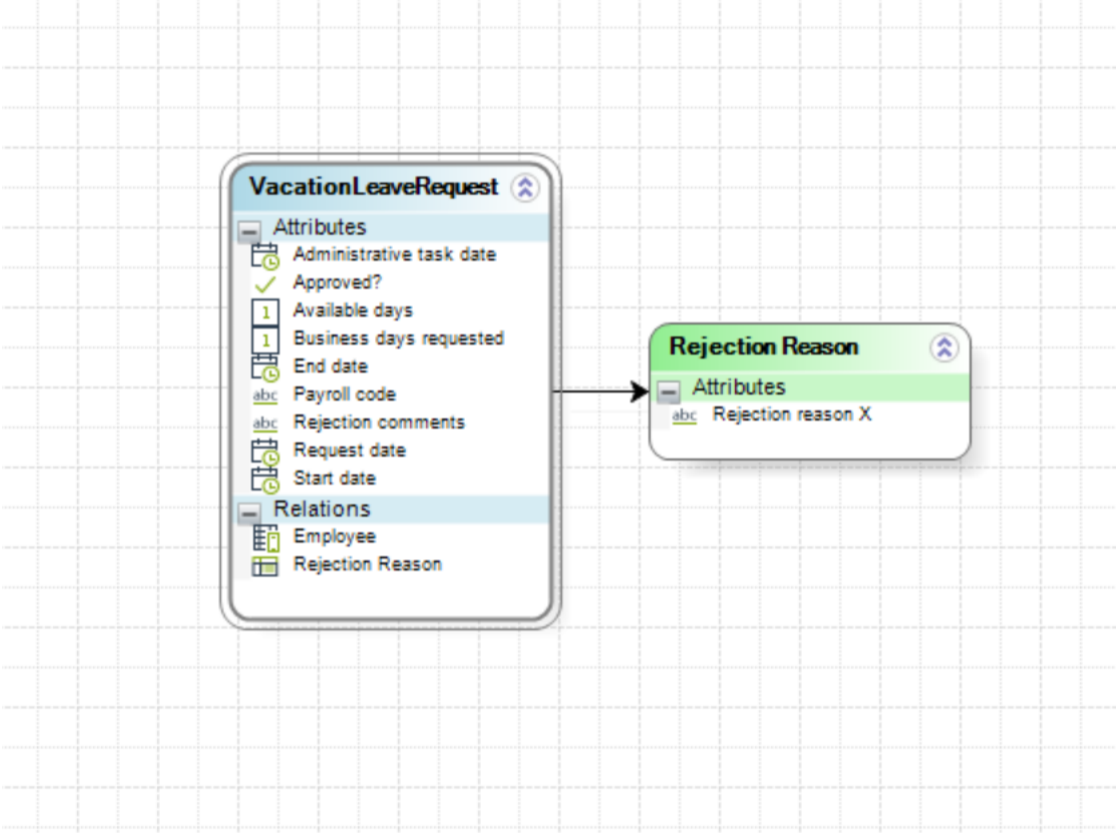

Fig. 33. Vacation Leave Request Process Data Model.

13. Select the option *Add Related Entities* by right clicking the *VacationLeaveRequest* Entity.

Copyright © 2024 Bizagi

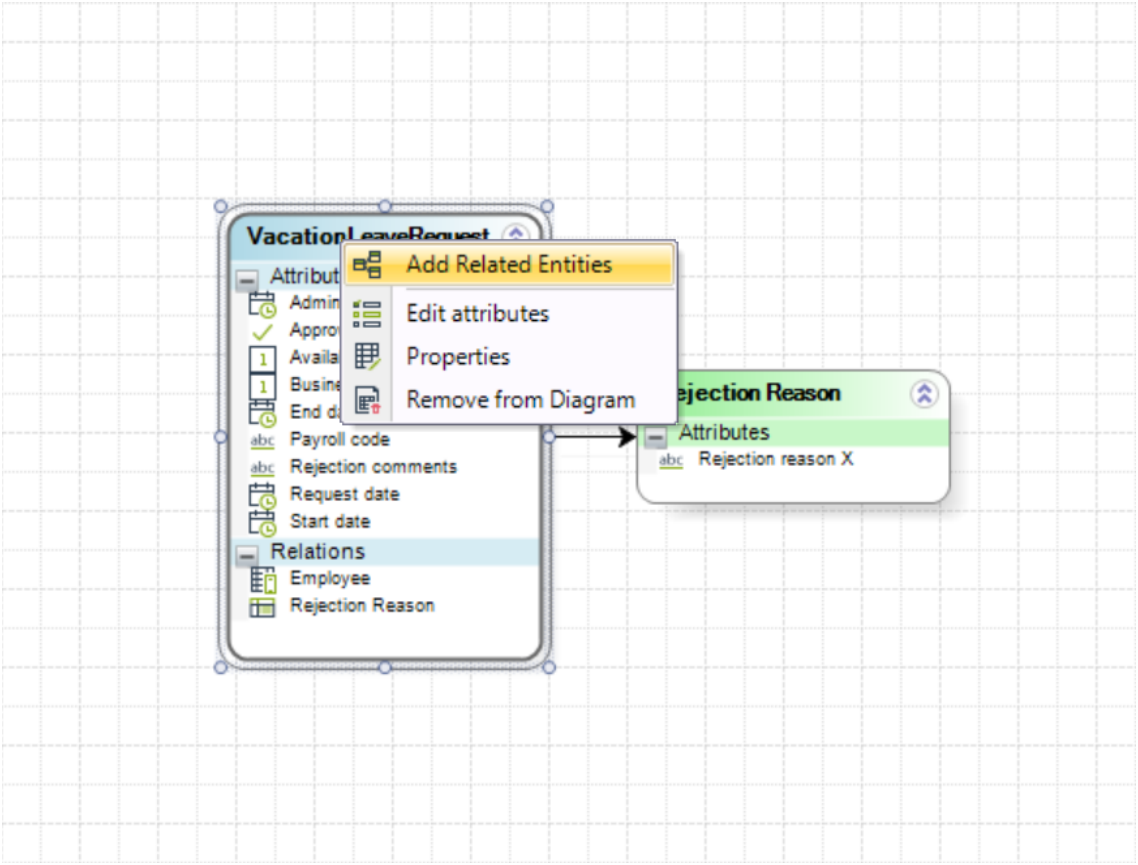

Fig. 34. Add Related Entities Button.

14. The complete diagram is displayed. Save and close the window.

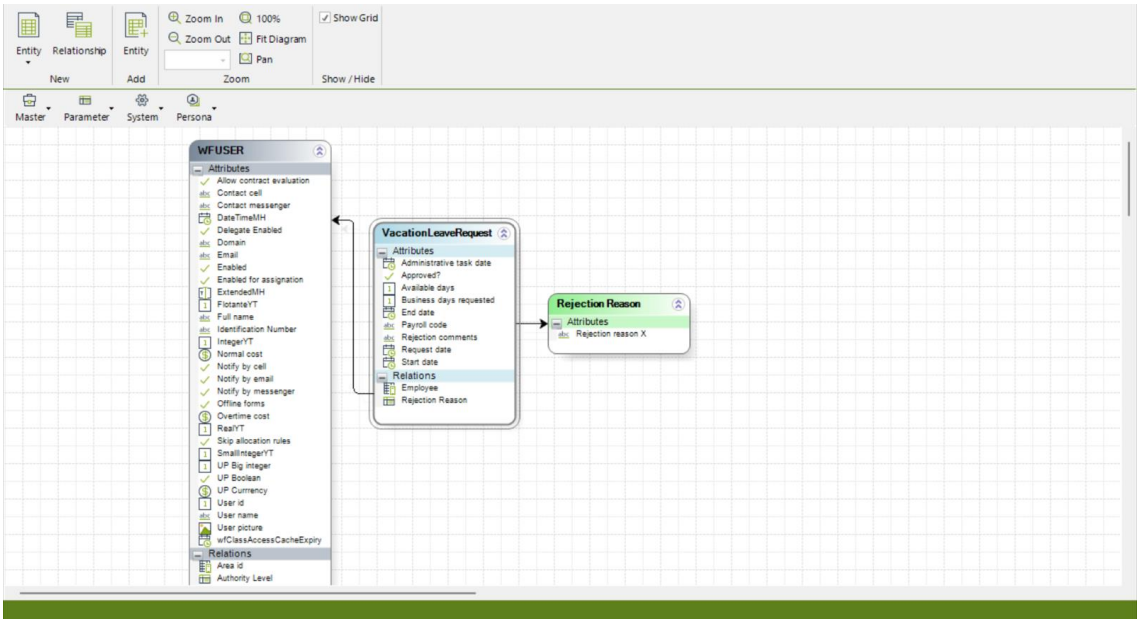

Fig. 35. Complete Vacation Leave Request Process Data Model.

Forms creation

Once the Process Diagram and the Data Model are ready, we will proceed to create the forms associated with each one of the human activities of the Process. Forms are used to enter, and display required information, so that end users can interact with the Process.

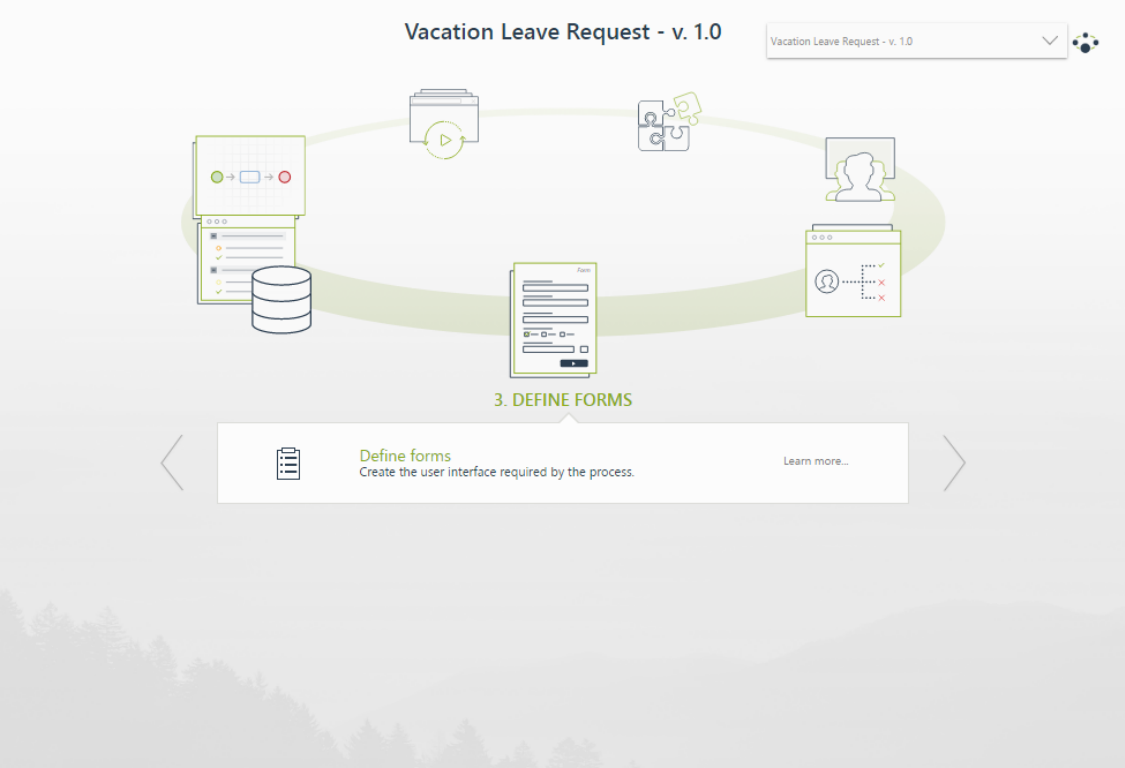

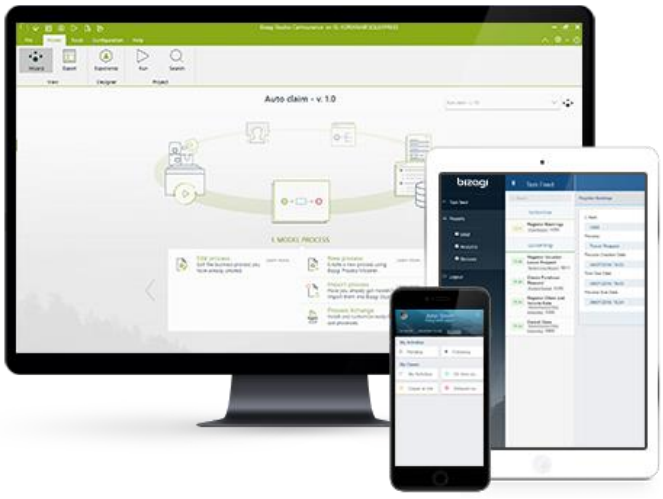

Fig. 36. Process Wizard define Forms step.

Bizagi empowers modern businesses to embrace the mobile work revolution and elevate business process automation to new heights. With our powerful Forms designer, you can create a unique user interface tailored to your needs. Bizagi automatically optimizes the display of information for each specific device, ensuring an optimal user experience across all platforms.

Move to the next step of the process and click on *Define Forms*.

Copyright © 2024 Bizagi

Fig. 37. Bizagi in different platforms.

Activity: Register leave request

The first Activity of the Process, *Register Leave Request* will have a warning label on the top right corner. Click on this Task.

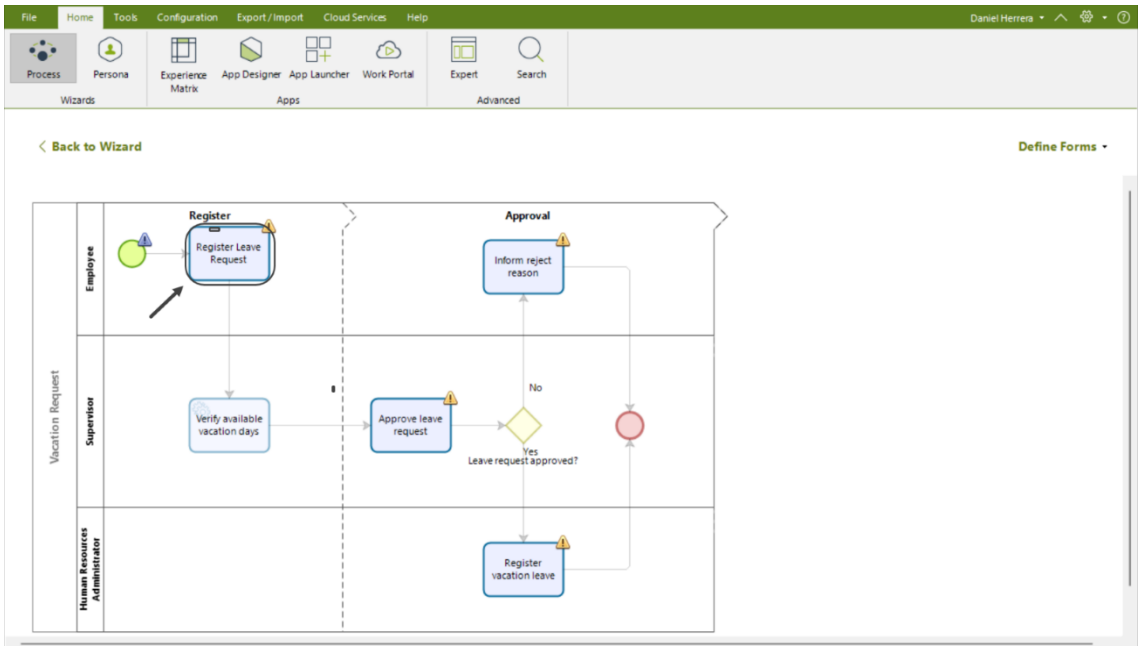

Fig. 38. Selection of the Register Leave Request in the Forms view.

This is the information that this Task must contain:

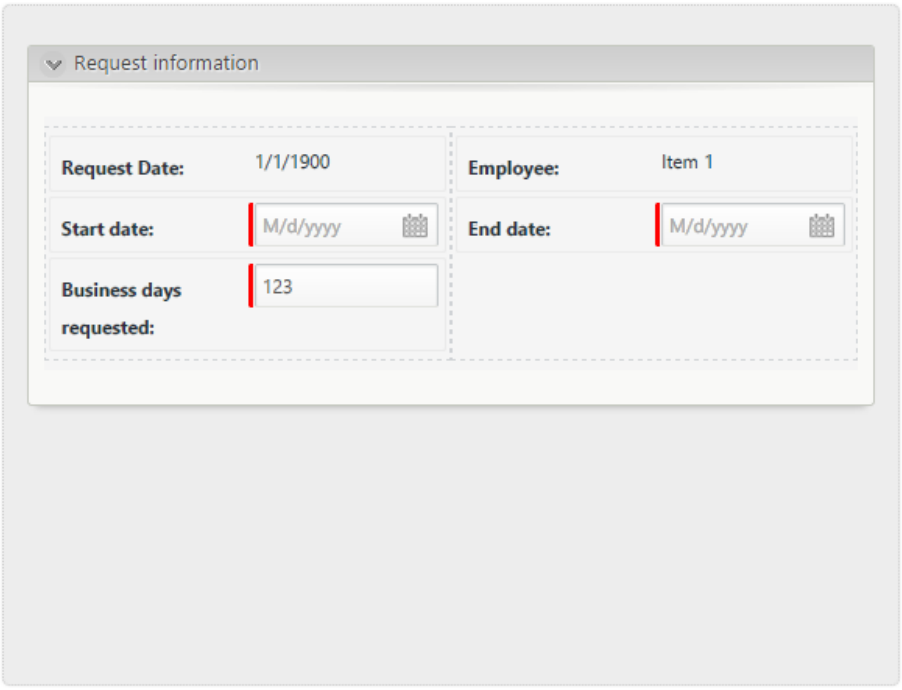

Fig. 39. Register Leave Request goal form.

We will guide you on how to create this form.

1. Upon clicking on the *Register Leave Request* activity, the following screen will appear:

Copyright © 2024 Bizagi

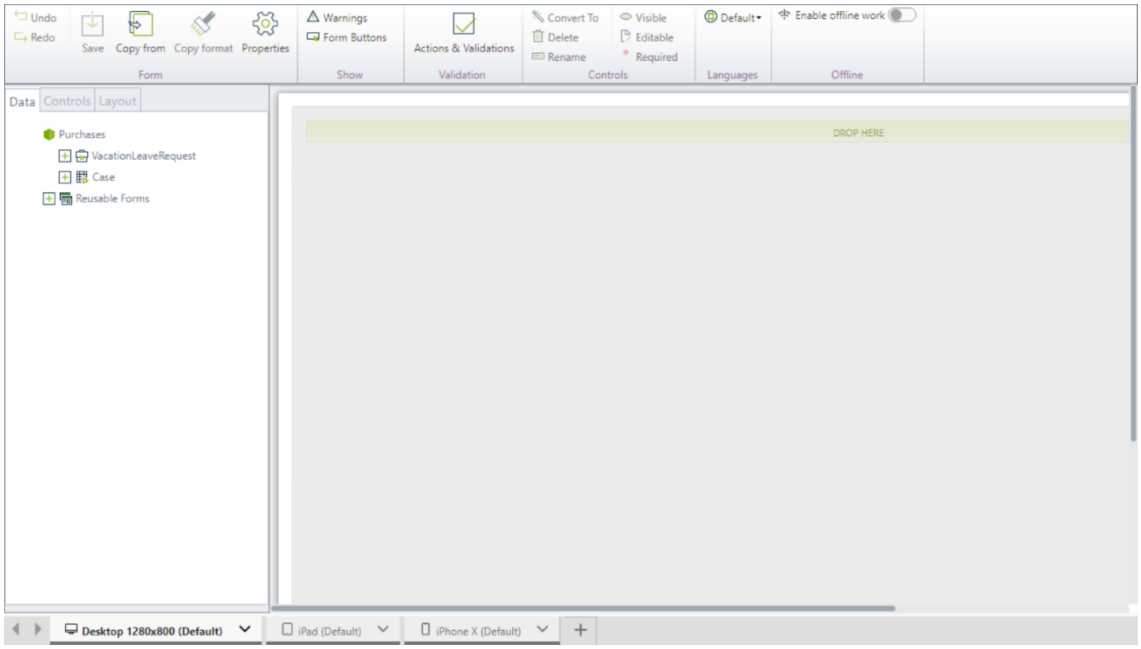

Fig. 40. Form creation window.

2. Click the Controls tab and subsequently click on the Container label. Drag and drop a Group to the DROP HERE section.

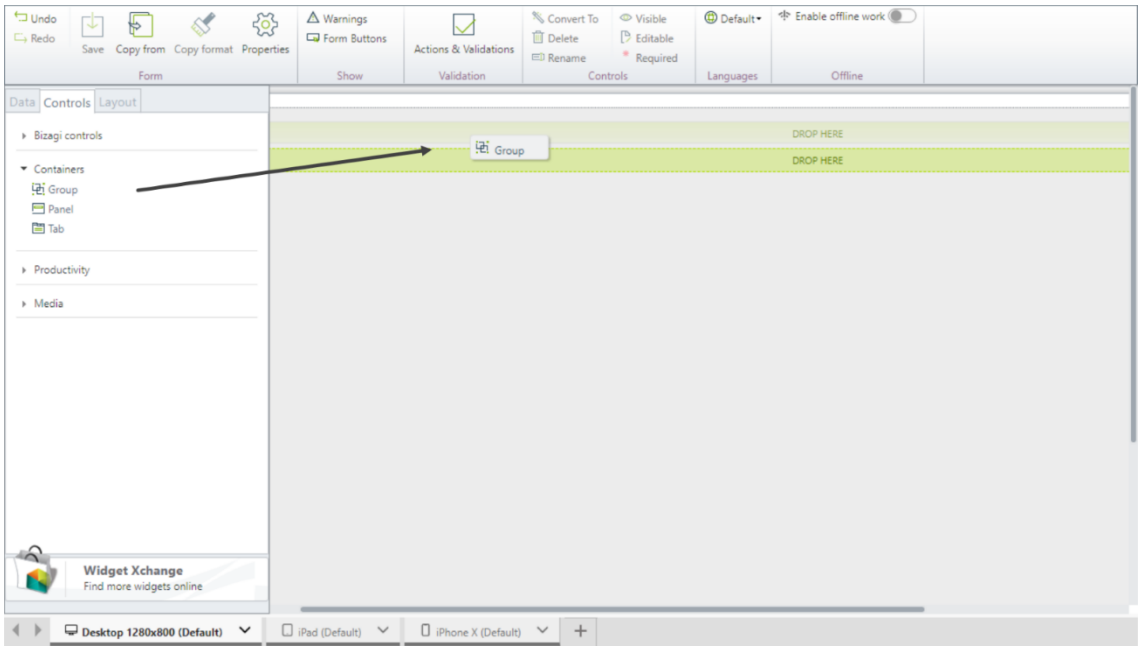

Fig. 41. Dragging of a Group to a Form.

3. Double-click it and type *Request information*.

Copyright © 2024 Bizagi

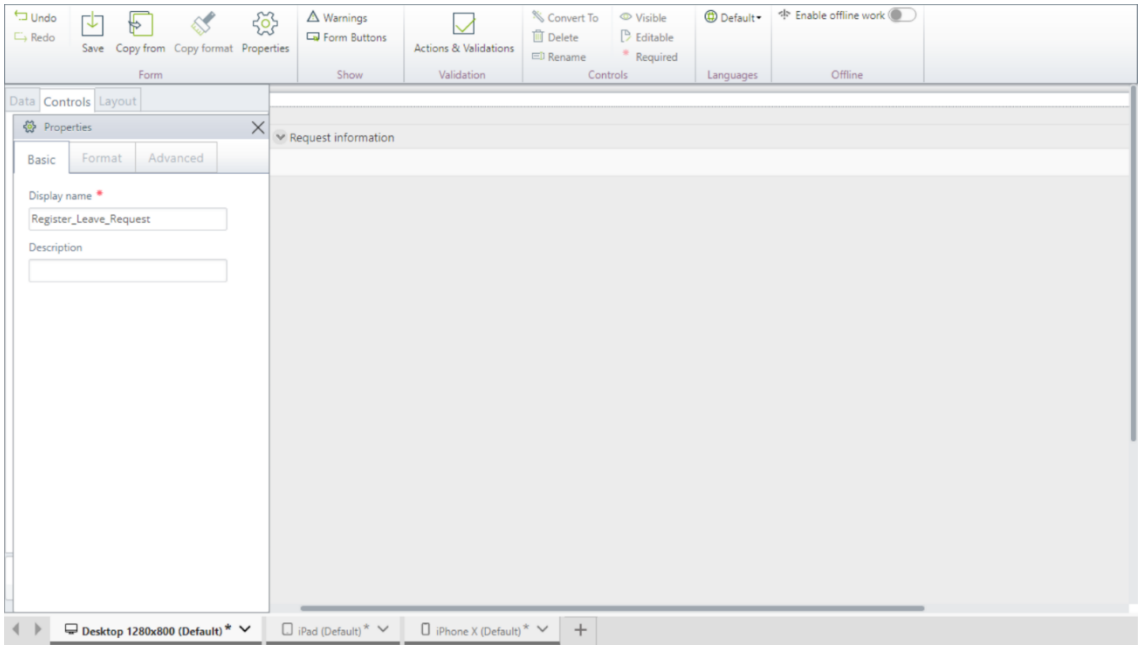

Fig. 42. Renaming Group in Form to 'Request information'.

4. Go to the Layout tab to include a layout. Layouts help distribute the information and make it more appealing.

   Drag and drop a 50%-50% layout into the DROP HERE section within the Group.

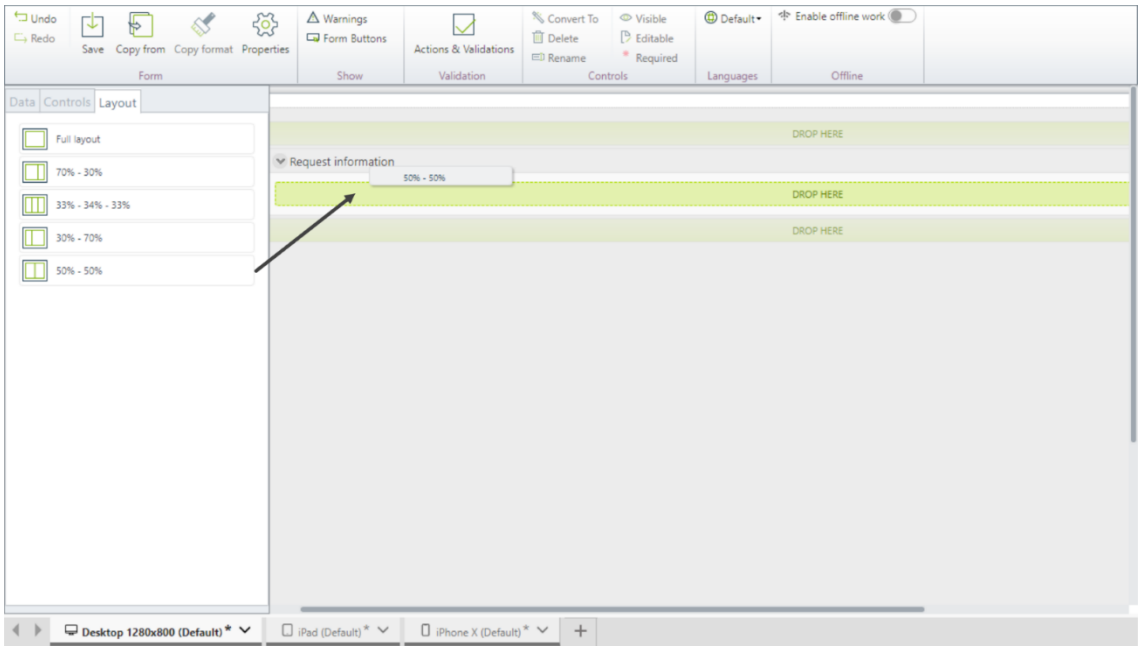

Fig. 43. Aggregation of a Layout into a Group.

5. Click the Data tab to include the attributes in the layouts. Drag and drop the elements we want as per Fig. 42 from the Data Model.

Copyright © 2024 Bizagi

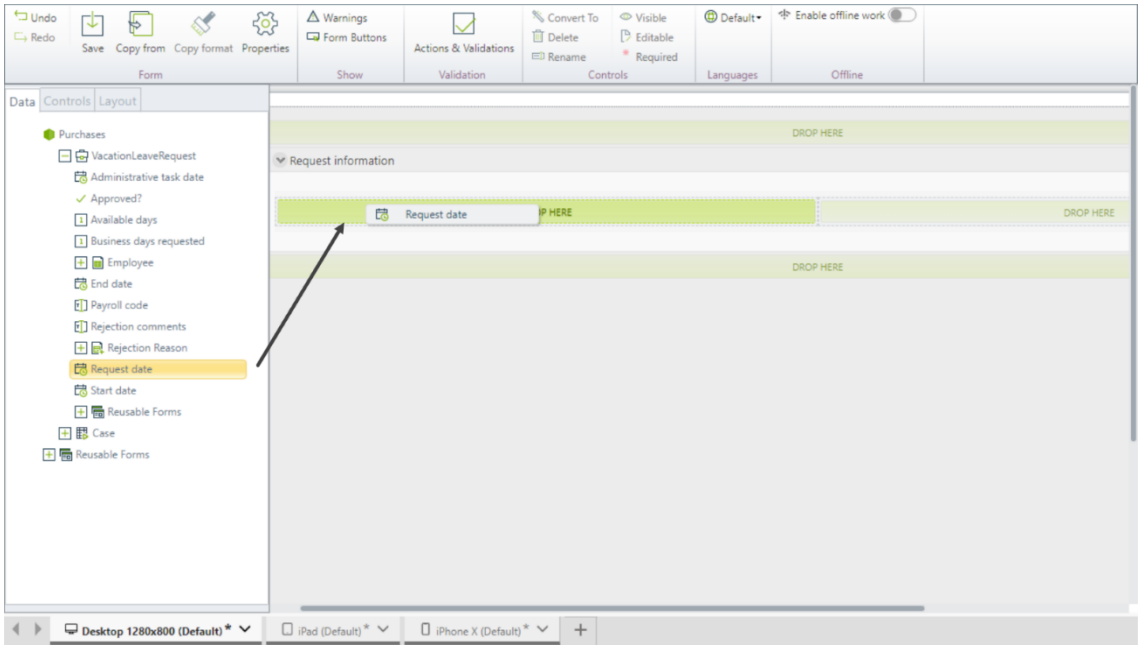

Fig. 44. Aggregation of Request date into the Layout.

6. **Request date:** Drag and drop the attribute in the first quadrant of the layout.

   This field must be read only. Click the field, on the left-hand side you will see the Basic Properties of Request date Properties. Locate the Editable property and select the *No* option (Cross icon). This makes the control read only.

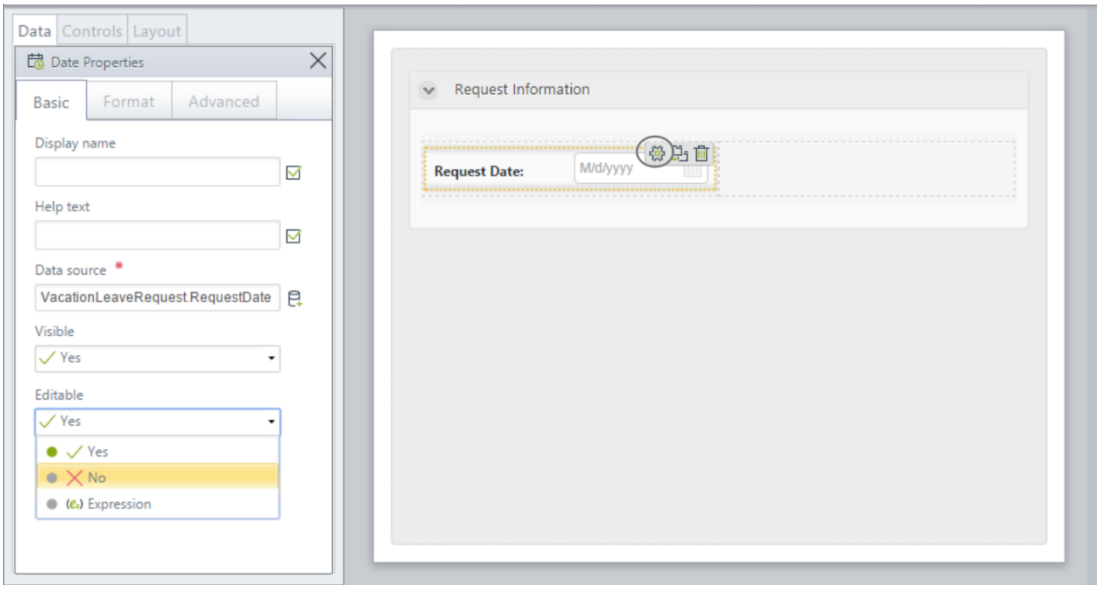

Fig. 45. Changing editability of a field.

7. **Employee:** Drag and drop the attribute in the second quadrant of the layout. This field must be read only. Set this control as non-editable by opening the *Editable* property and select the cross mark. This makes the control read only.

Copyright © 2024 Bizagi

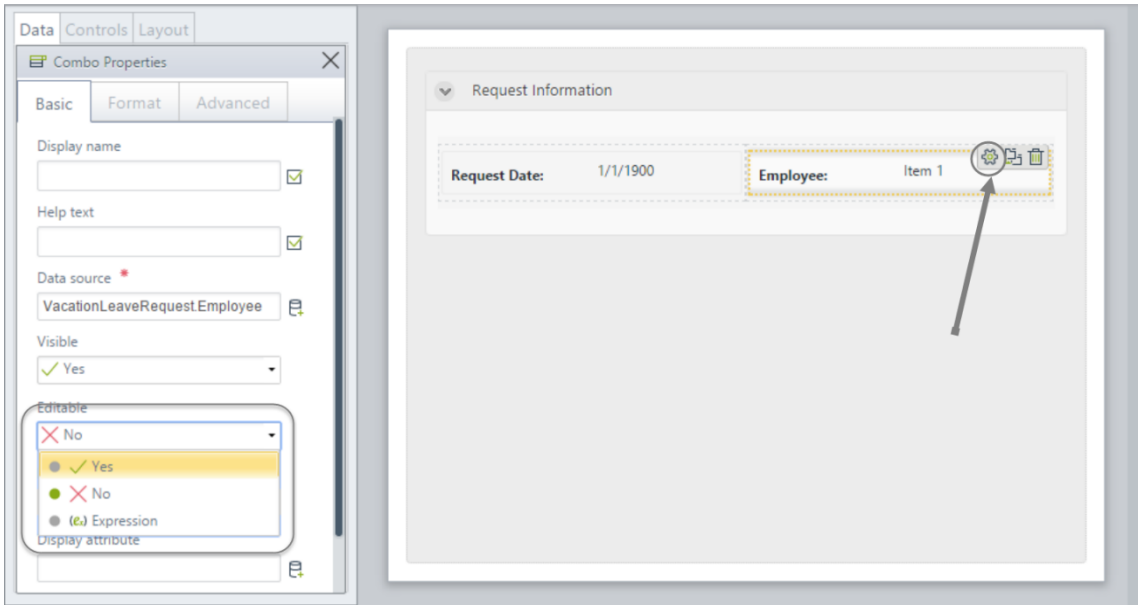

Fig. 46. Aggregation of Employee into the Layout and change of editability.

8. The Employee attribute is related to the *WFUSER* system entity. Therefore, it is necessary to relate a Display Attribute. Locate the *Display attribute* property and select *Full Name*.

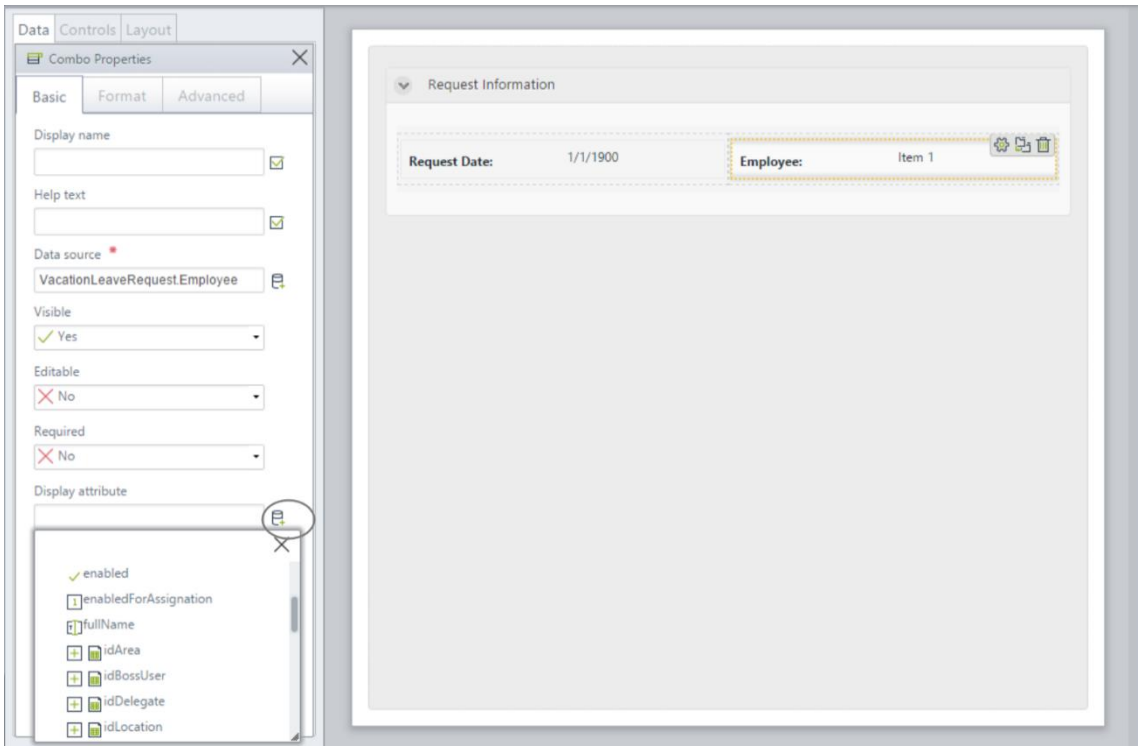

Fig. 47. Aggregation of the 'Employee' attribute into the Layout and edition of display attribute.

9. Go back to the Data tab. Drag and drop the following attributes from the Data Model as shown below. *Start date – End Date – Business days requested.*

Copyright © 2024 Bizagi

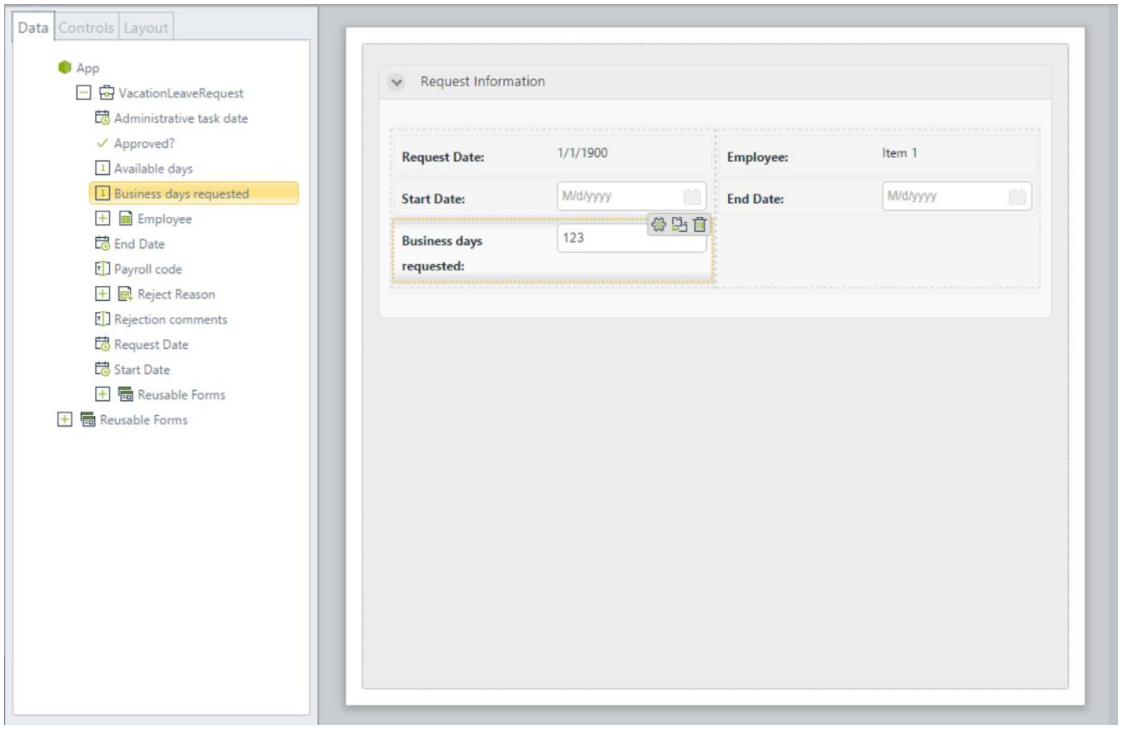

Fig. 48. Aggregation of other attributes to the form.

10. These fields will be mandatory. Select them all holding down the CTRL key. Their Properties are displayed. Select the Check mark on the *Required* property.

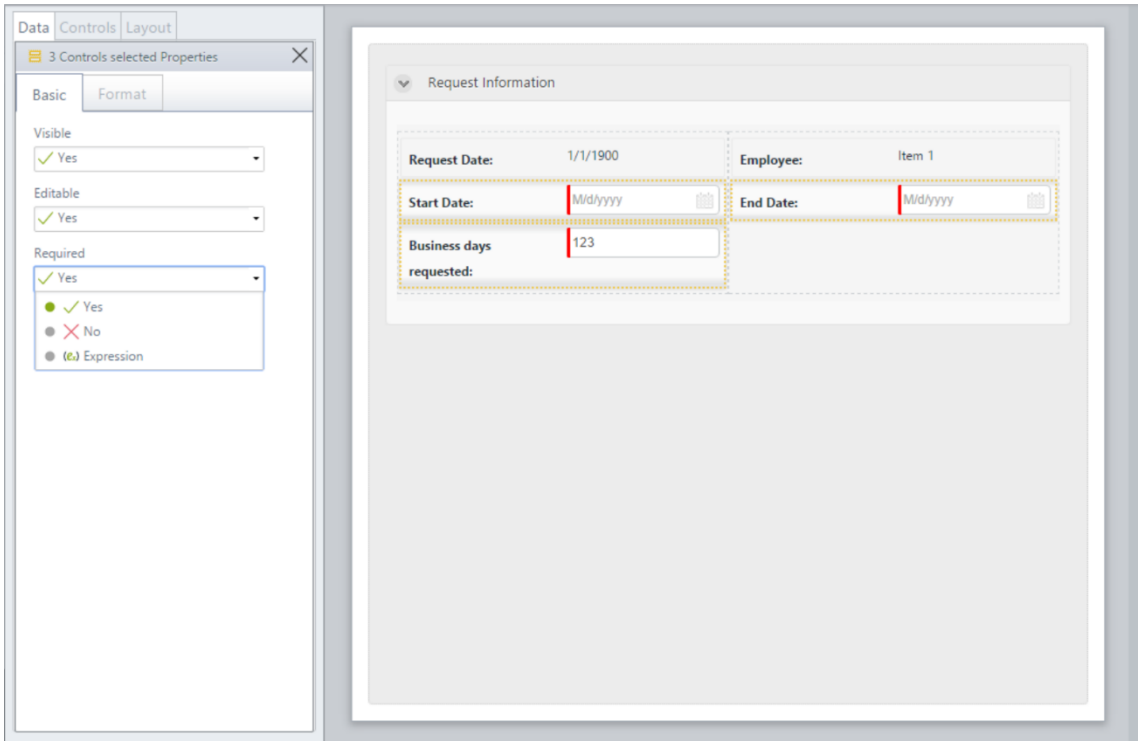

Fig. 49. Edition of fields to mandatory.

11. Save the form and close it to return to the Process Wizard.

Copyright © 2024 Bizagi

Activity: Verify available vacation days

Since this is an automatic Task, no Form must be related. In step 6 of the Process Wizard (Define Integration Interfaces) we will see how the configuration is done for this Task.

Activity: Approve leave request

1. Select the Activity *Approve leave request*.

   The Forms Designer will open.

   The first part of the Form will be the same as the one designed before, so we will use the *Copy From* option to help us design faster.

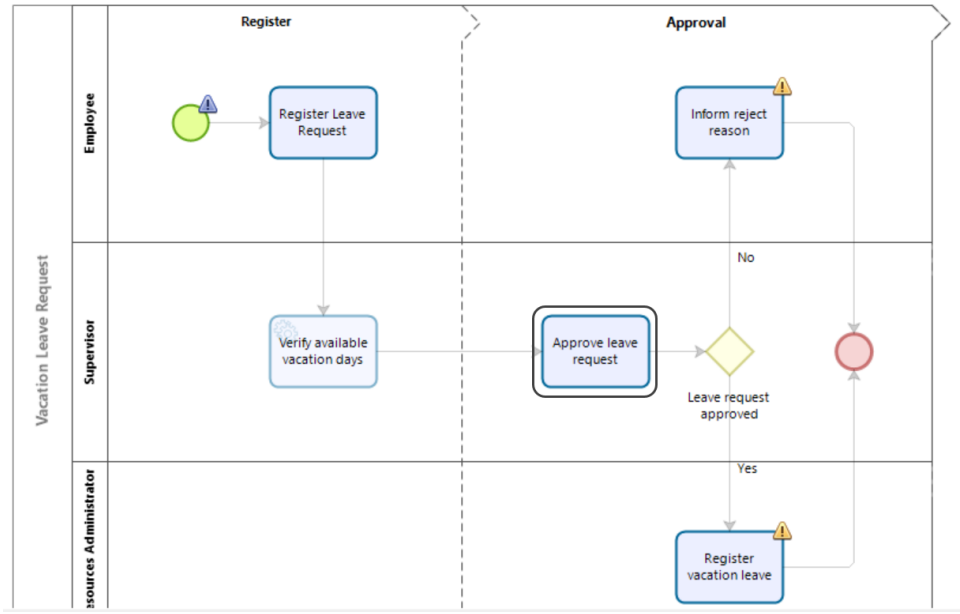

Fig. 50. Creation of a Form in Approve leave request.

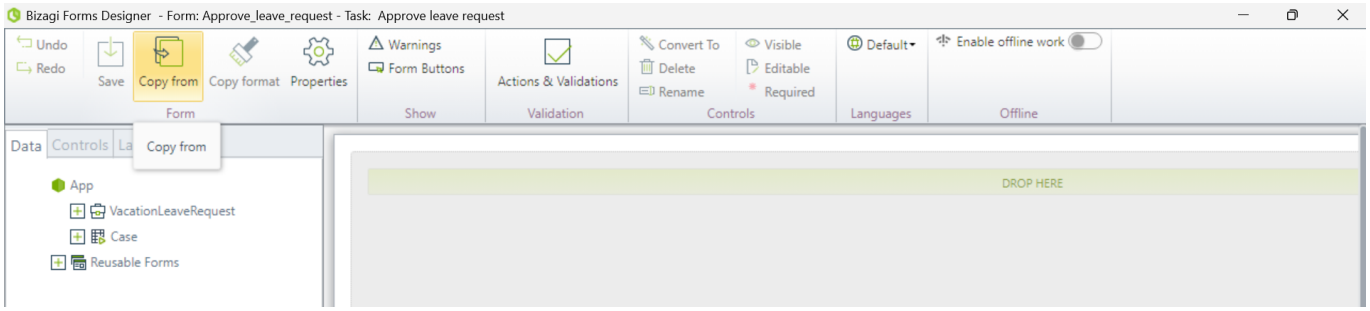

Fig. 51. Copy from button in the form editor

A new window displaying the Process flow opens. Select the *Register leave request* Activity by clicking it. Click **OK**.

Copyright © 2024 Bizagi

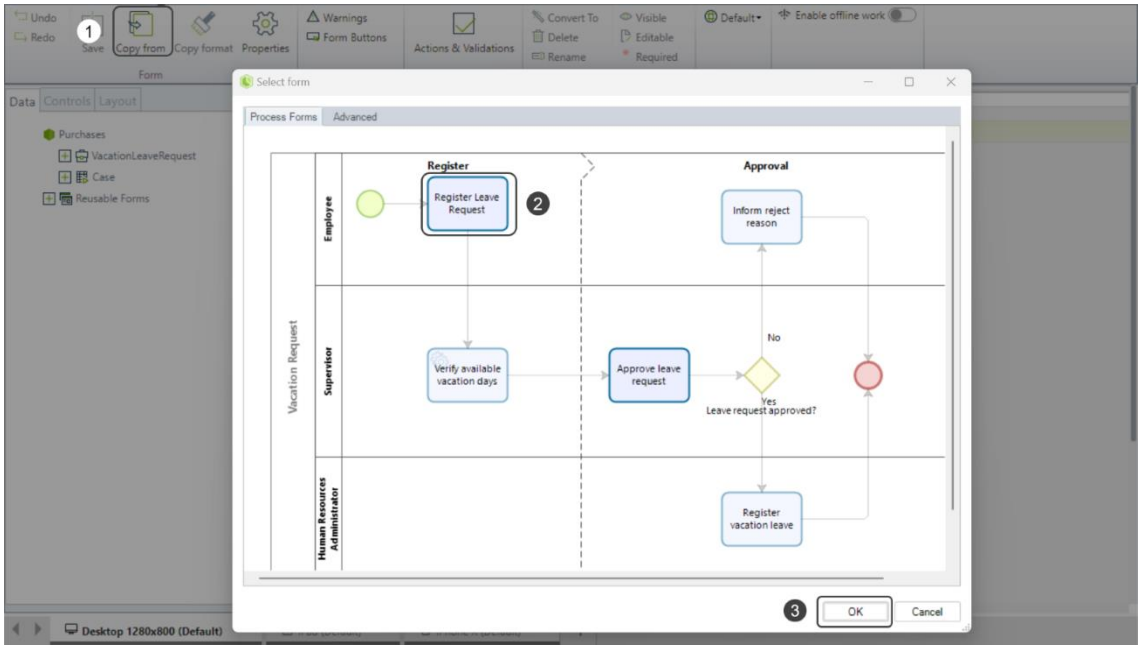

Fig. 52. Copying of a Form from another Task.

2. The information is copied exactly as in the original form. To make the Controls *Start date*, *End date* and *Business days requested* read only we should set the Editable properties to False. Select them all at the same time clicking them while holding down the CRTL key and select *not editable* in the properties.

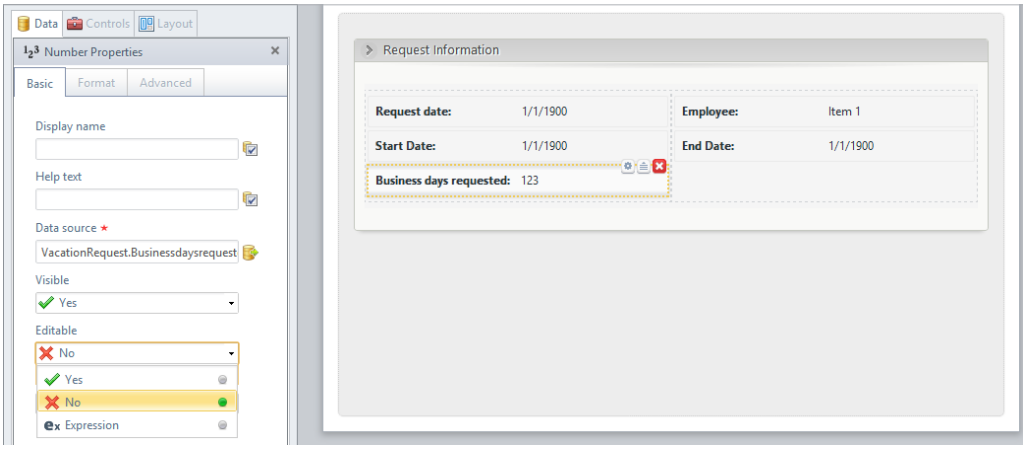

Fig. 53. Changing editability of Start date, End date and Business days requested.

3. Add a new Group under the existing one. Go to the Controls tab, then drag and drop a Group underneath the existing one. Change its name to *Approval information*.

Copyright © 2024 Bizagi

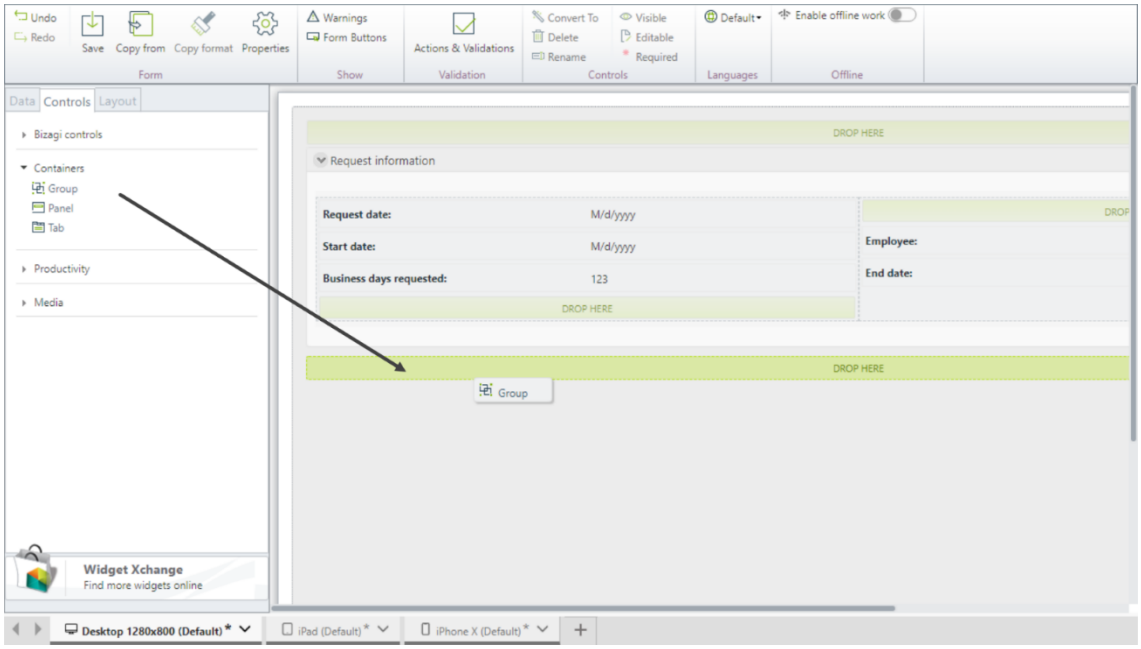

Fig. 54. Addition of another Group to the From.

4. The following controls will be entered, without a Layout.
    - **Available days:** Must have the *Editable* property set to 'No'.
    - **Approved:** The *Required* property should be set to 'Yes' since this field is mandatory.
    - **Reject reason**
    - **Rejection comments**
    - **Employee´s Supervisor:** Locate the Employee attribute in the data model. Expand it and drag and drop *Employee – Boss user id – Full Name* attribute to the form. This control must be read only. Change the display name by double-clicking the field and type: *Employee's Supervisor*.

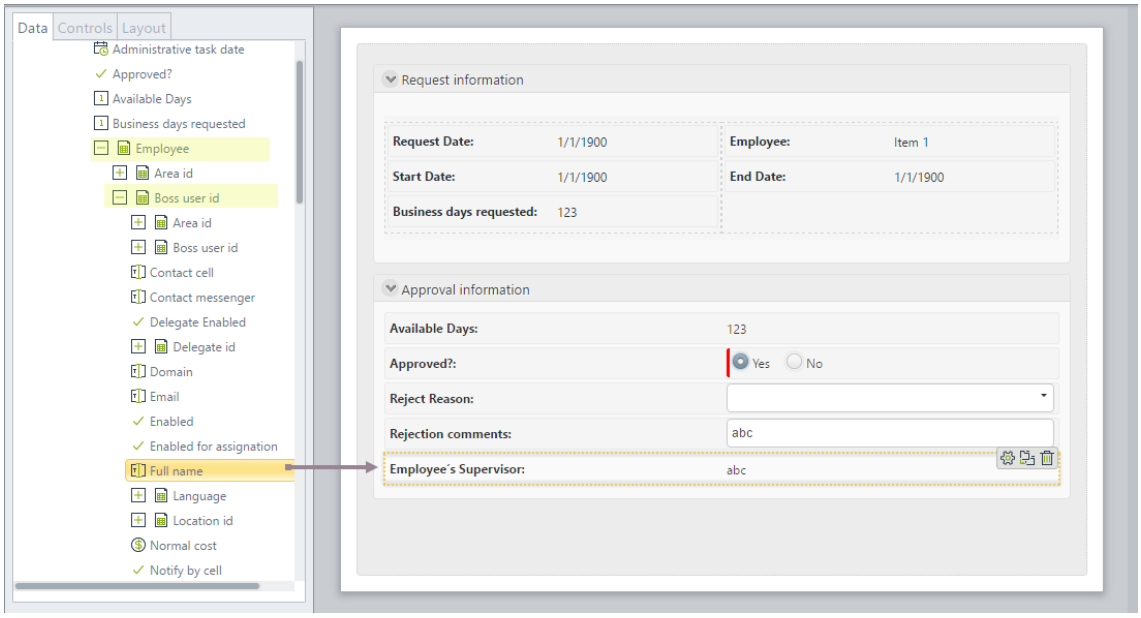

Fig. 55. Addition of the Employee's Supervisor attribute to the Form.

5. Click the **Save** button once the Form has been completed and close it.

Copyright © 2024 Bizagi

Activity: Register vacation leave

The creation of the form *Register vacation leave* will contain the information of the Supervisor's Form as read-only and include the Controls that the Human Resources Assistant must complete.

1. Select the Activity *Register vacation leave* on the third step of the Process Wizard.

   We will add all the information we included on the ***Register leave request*** and ***Approve leave request*** Activities, as read only as we did in the previous step. Go to the ***Copy from*** option and select *Approve leave request* Task. Click **OK**.

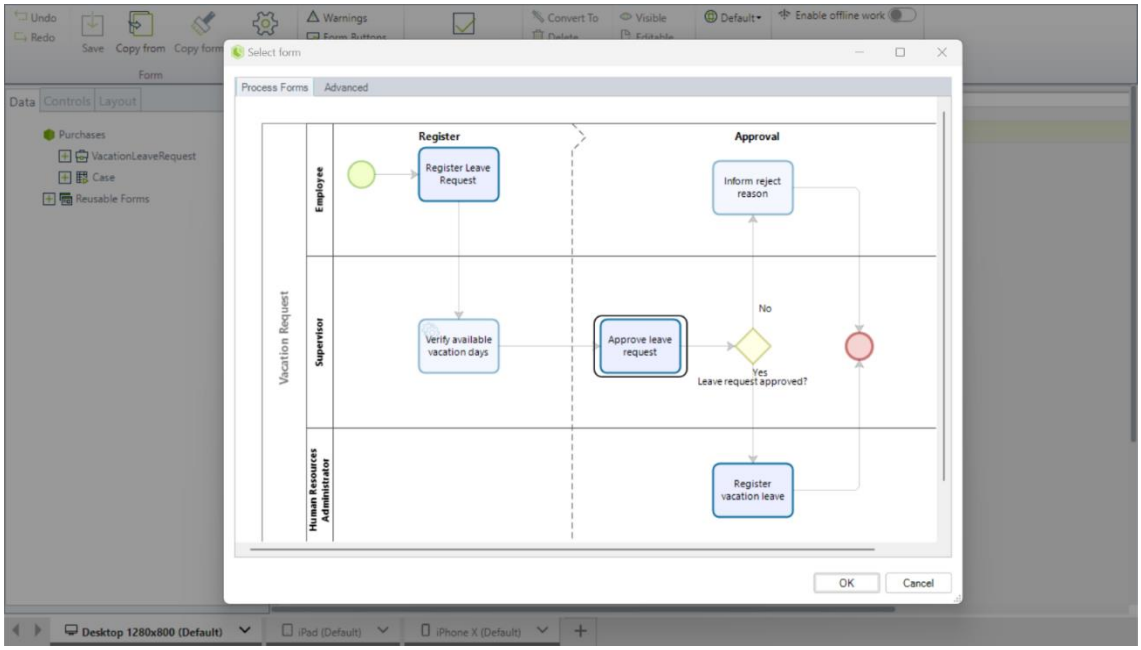

Fig. 56. Copying the Form Approve leave request for Register vacation leave.

2. Change the *Editable* property to not editable for all Controls, in their respective Properties.

Copyright © 2024 Bizagi

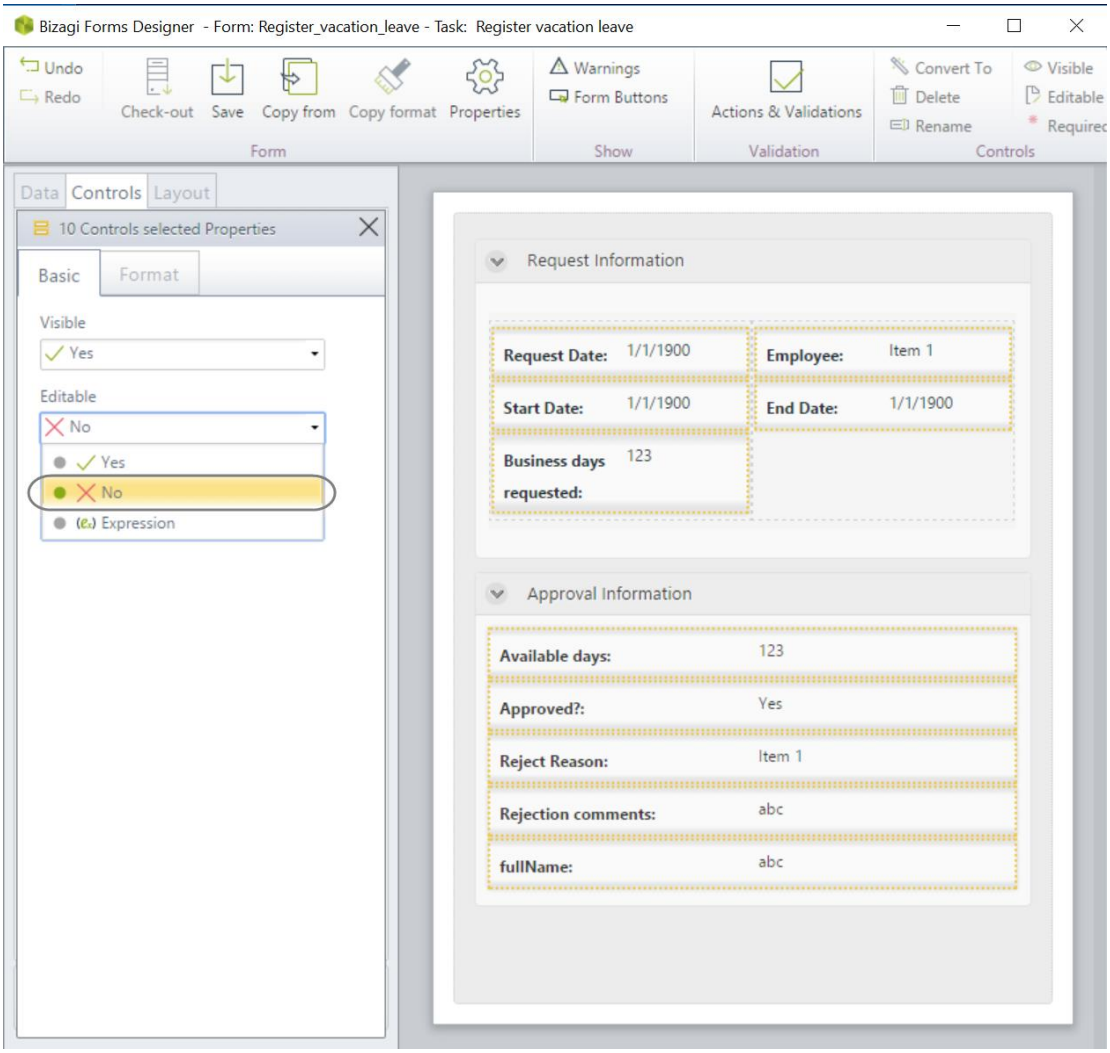

Fig. 57. Changing the editability Property of the Controls.

3. Include a Group on the bottom of the Form, by dragging and dropping a Group (found in the Controls tab). Change its name to *Register leave request*.

   Then, include a 50%-50% Layout in the group, by going to the Layout tab and dragging and dropping the layout in the new group.

Copyright © 2024 Bizagi

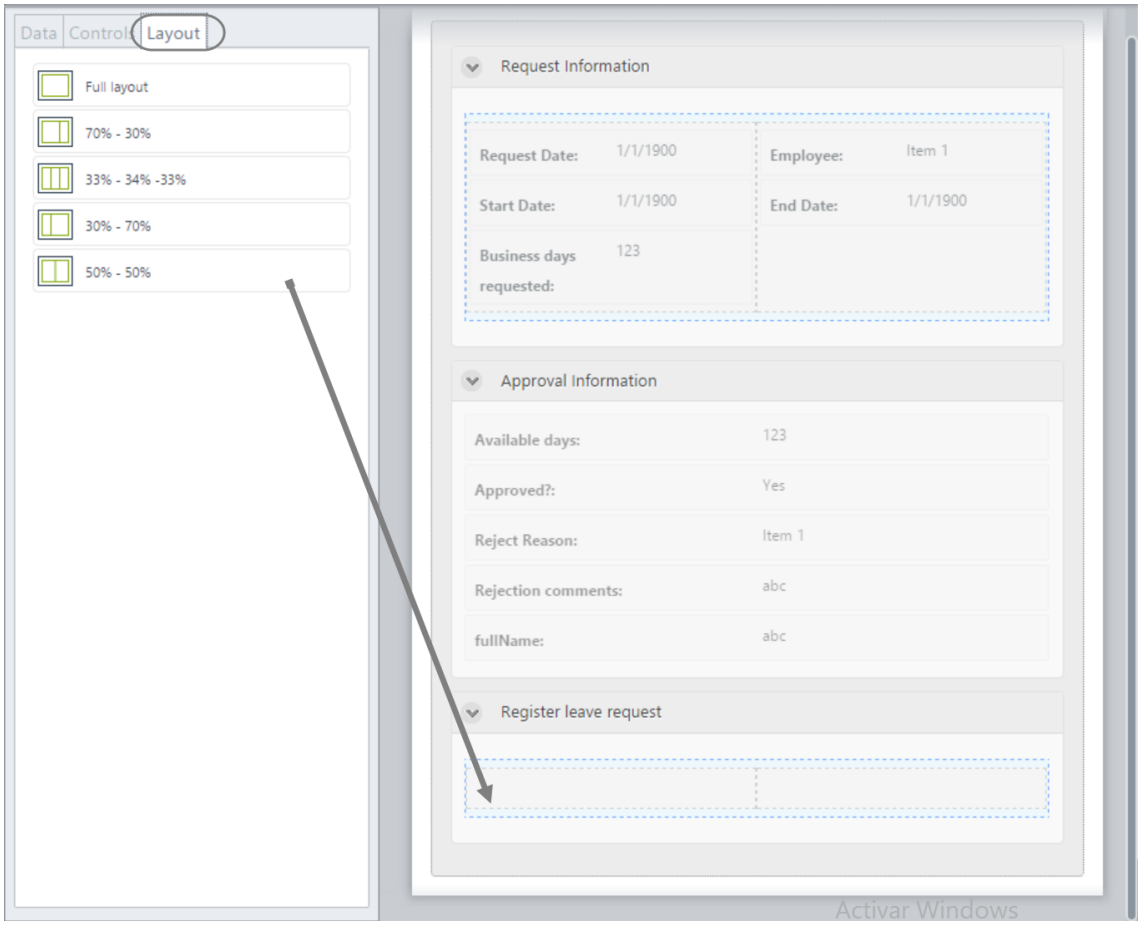

Fig. 58. Addition of a 50%-50% Layout inside the new Group.

4. Go back to the Data tab. Drag and drop the attributes *Administrative task date* and *Payroll code* to each side of the new layout. Make them both mandatory (Required Property).

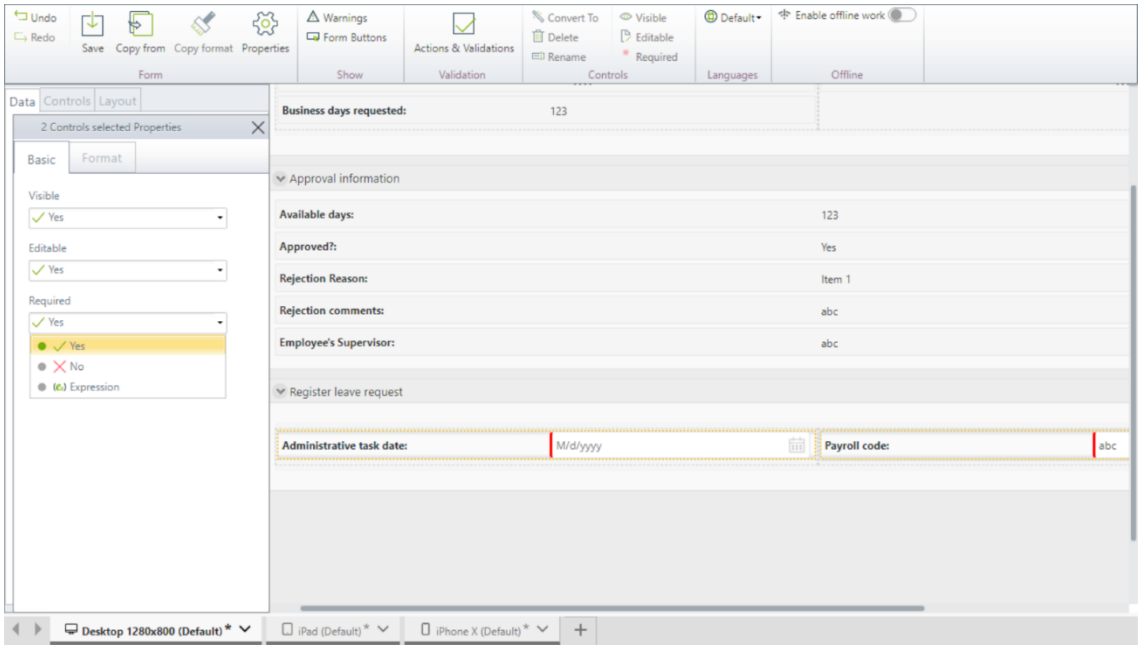

Fig. 59. Edition of the Required Property of the Controls.

5. Click the **Save** button and close the Form.

Copyright © 2024 Bizagi

Activity: Inform reject reason

Click the Activity *Inform Reject Reason*, in the third step of the Process Wizard. Once again, use the *Copy from* option and copy the information from the *Approve leave request* Activity.

Set the *Editable* property to No for all the fields.

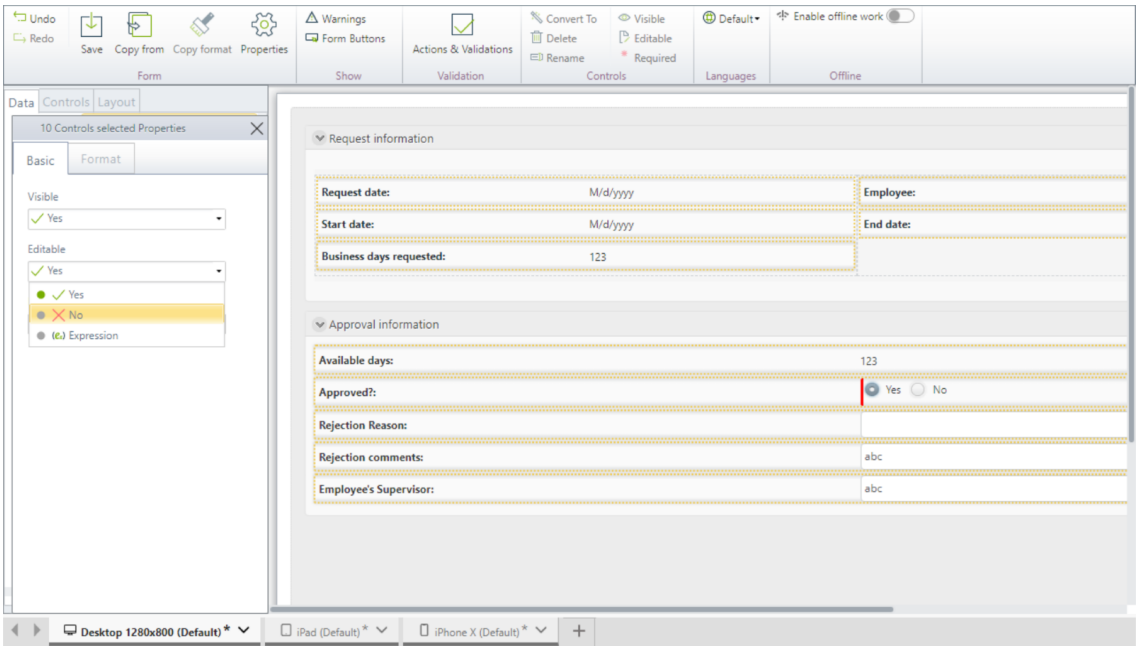

Fig. 60. Edition of the Editable Property of the Controls.

Click the **Save** button and close the Form. Click at the top right corner of the Forms Designer to return to the Process Wizard view.

Copyright © 2024 Bizagi

Business rules

The next step in the Process Wizard is the definition of business rules that control the Process routing.

The first rules to be completed are known as transition rules. These rules evaluate conditions and decide where the Process flow is to continue. They return True or False and they are associated to Gateway shapes.

We will create rules for the *Leave request approved?* Gateway: If the request was approved, the Process flow will continue to the *Register vacation leave* Task. If not, it will continue to the *Inform reject reason* Task.

Since there are two paths after the Gateway, we will create a rule for one of the Transitions and make the other the default *Else* condition.

Transition Conditions

1. To create a Business Rule, go to the fourth step of the Process Wizard and select *Define Expressions*:

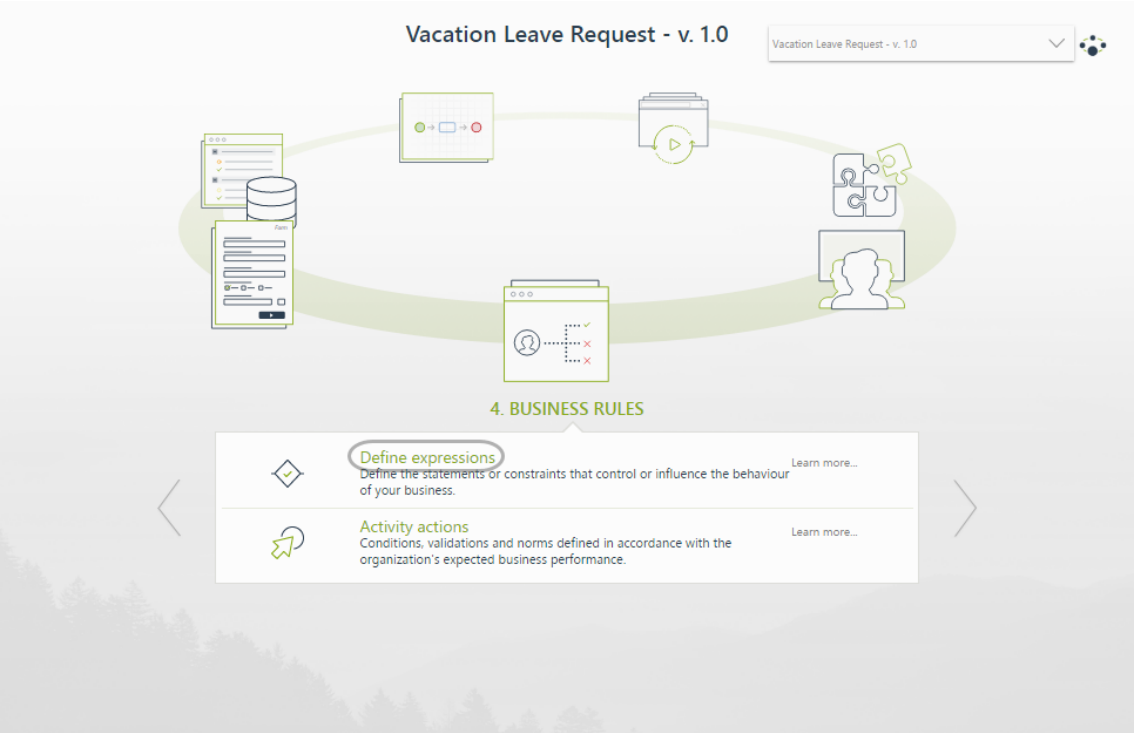

Fig. 61. Selection of the Define expression button in the 4th step of the Wizard, Business Rules.

2. The Rule editor will open highlighting the transitions that have no rule associated with them:

Copyright © 2024 Bizagi

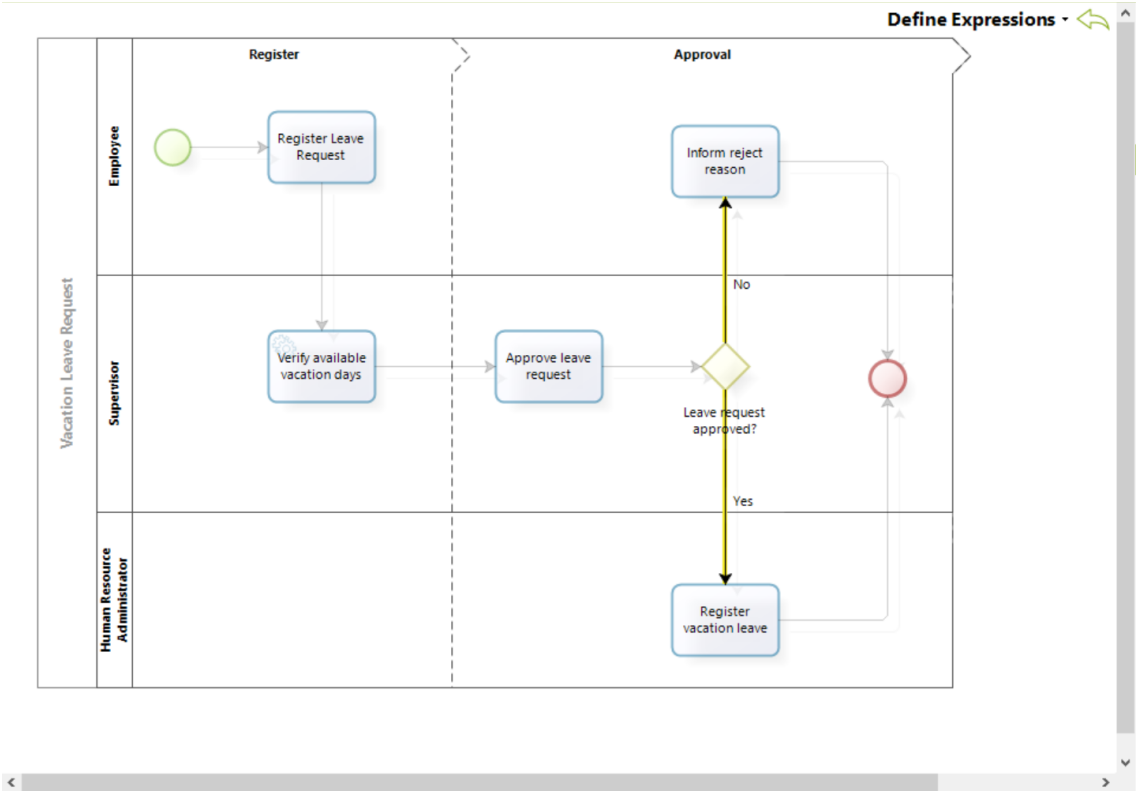

Fig. 62. Define Expressions diagram.

3. Select the transition named ***Yes*** that reaches the Activity *Register vacation leave* by clicking the transition.

   Three options are presented:

   - Always: when selected Bizagi will always take that path ignoring the other sequence flows.
   - Else: when selected Bizagi will take that path when no other path is valid. We recommend always having one sequence flow with this option.
   - Based on the result of an expression: when selected Bizagi will evaluate an expression to take or not the selected path.

4. Select *Based on the result of an expression*. The list of system Expressions and previously created Expressions opens. Since there are no expressions created, click **New**.

Copyright © 2024 Bizagi

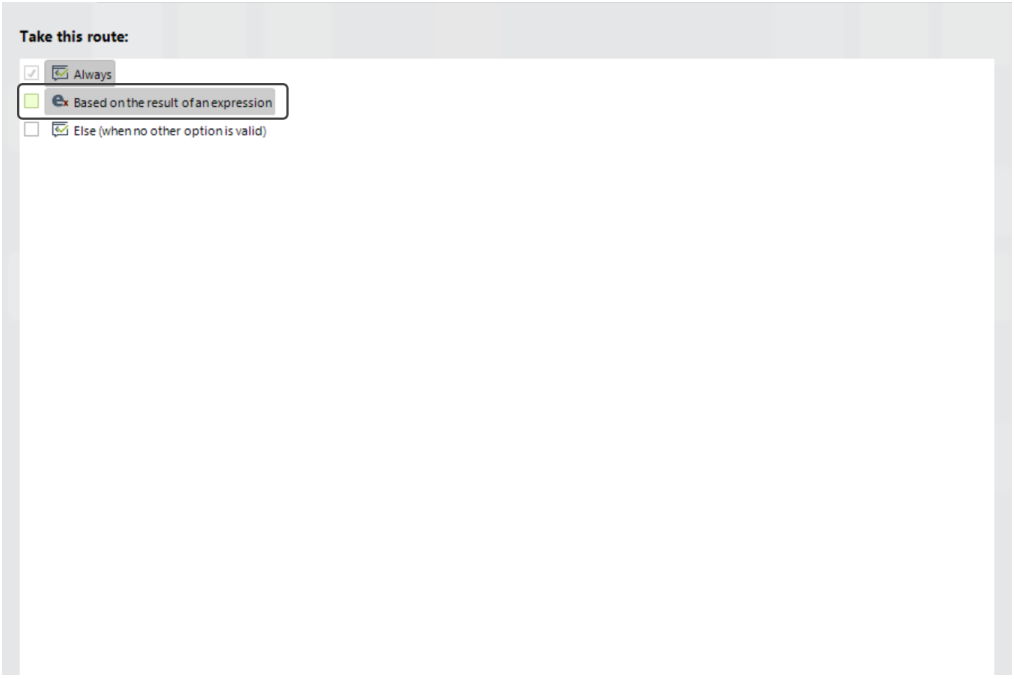

Fig. 63. Based on the result of an expression.

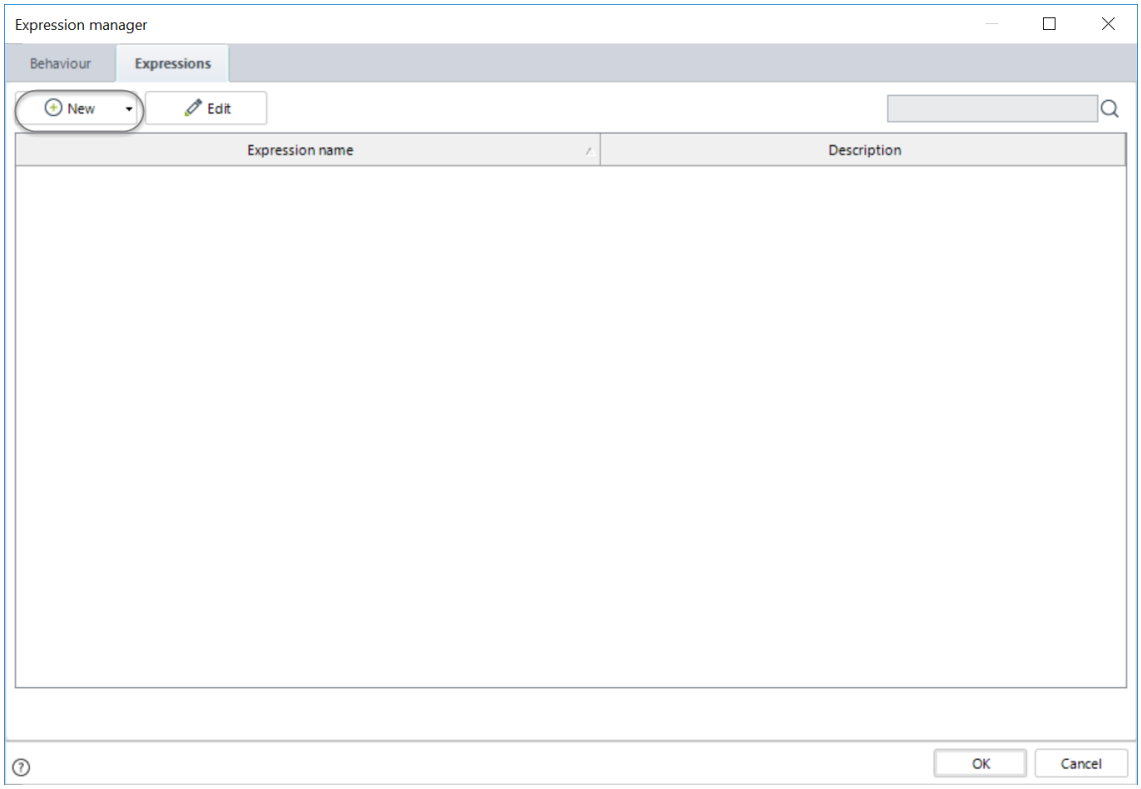

Fig. 64. Creation of a new Expression.

5. The Boolean Expression editor opens.

   Drag and drop the attribute *Approved* from the Data Model at the left to the condition item. Select the function *is Equal to* and choose the *true* option:

Copyright © 2024 Bizagi

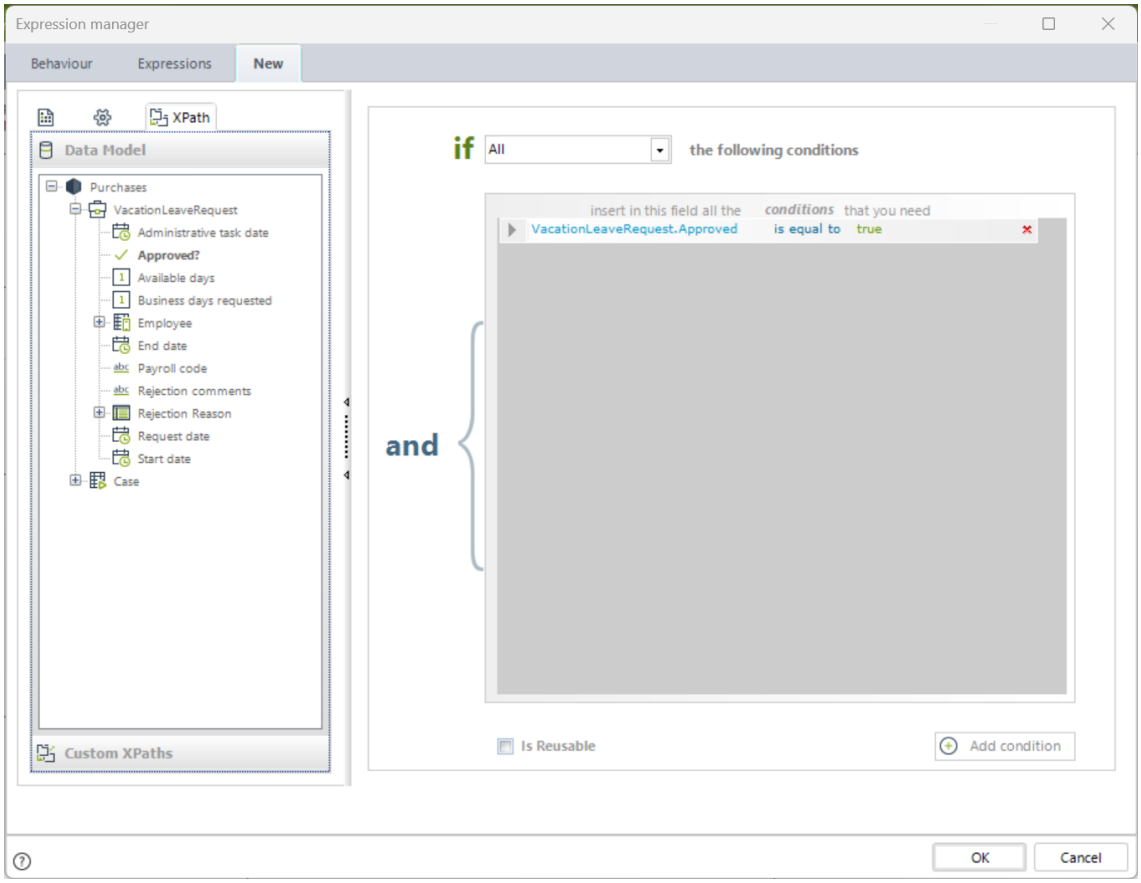

Fig. 65. Construction of a new Expression.

6. Click **OK**.
7. Select the transition from the gateway that reaches the **Inform Reject Reason** Task by clicking it. Select *Else* from the options displayed, and then click **OK**.

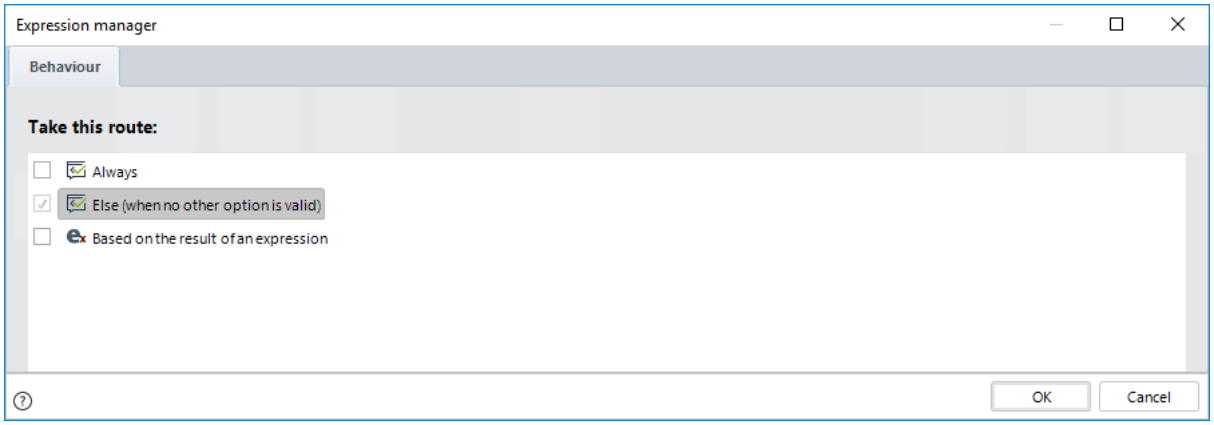

Fig. 66. Selection of the Else option for the other route.

8. Go back to the Process Wizard by clicking at the top right corner of the screen.

Note: In exclusive gateways Bizagi will give priority to the sequence flows with expressions over the ones with *Always* selected. That is, in a single exclusive gateway, if a sequence flow has **Always** defined and

Copyright © 2024 Bizagi

another sequence flow has an expression, Bizagi will take the expression path and disregard the Always path, when the expression is met.

Activity Actions

We will create rules to automatically fill-in the fields *Request date* and *Employee*; this way, when a case is started these two Controls will be filled by Bizagi containing the information of today's date and the Employee logged in.

These rules will be created in the first Activity of the Process; we will include an Expression that sets the Date of the Request and to save the Case Creator as the Employee.

1. Go to the fourth step of the Process Wizard and select ***Activities Actions***.

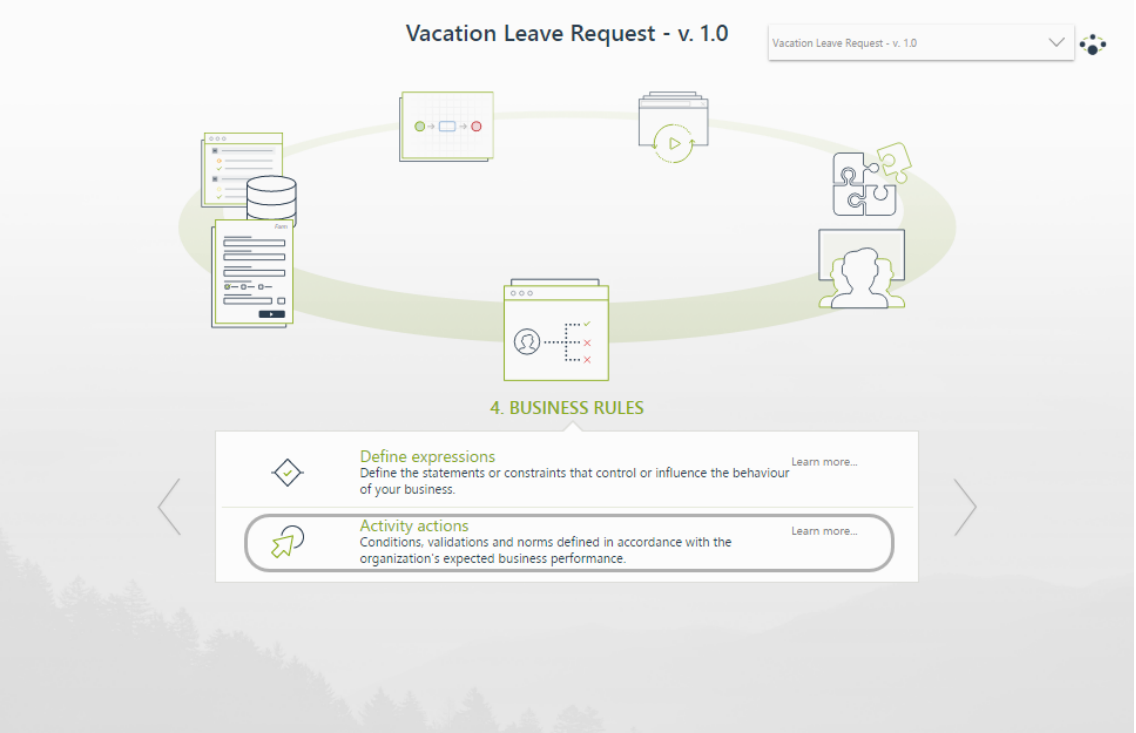

Fig. 67. Selection of the Activity actions button in the 4th step of the Wizard, Business Rules.

2. A new window opens, in this window you will see the different Tasks, you can add actions to these Activities. Select the *Register leave request* Activity.

3. Select the *On Enter* option. Then click the Plus icon to add an Action and select *Expression*.

Copyright © 2024 Bizagi

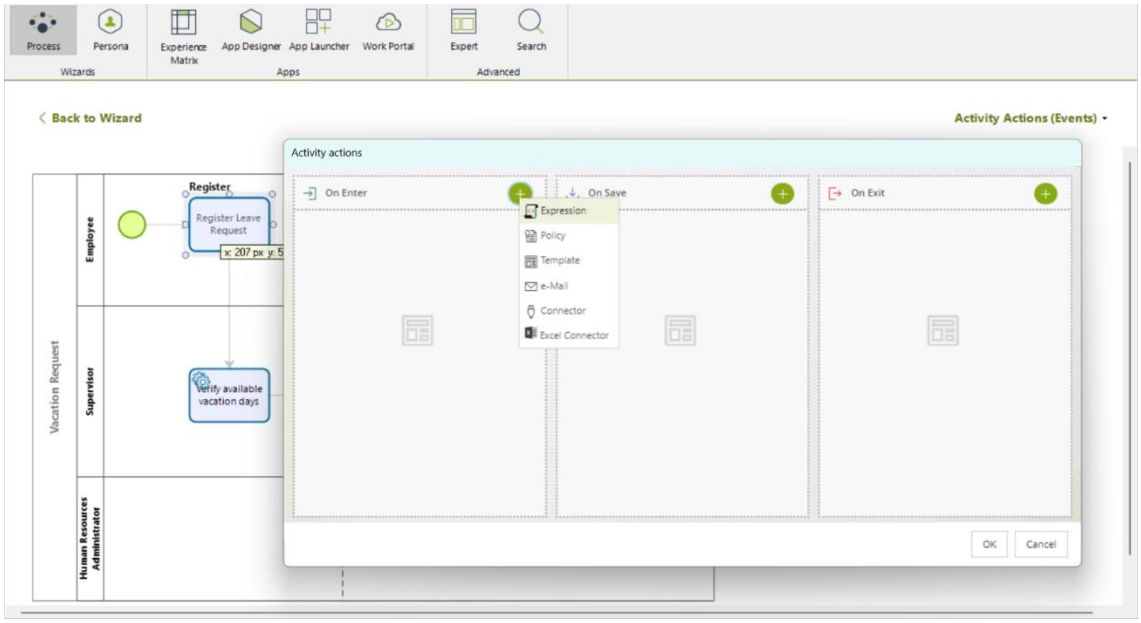

Fig. 68. Activity actions On Enter Expression creation.

4. The list of previously created expressions opens. Click **New**.
5. The Expression editor opens. Fill the *Display Name* and *Description* as follows; this information will let you identify the Expression for later use.

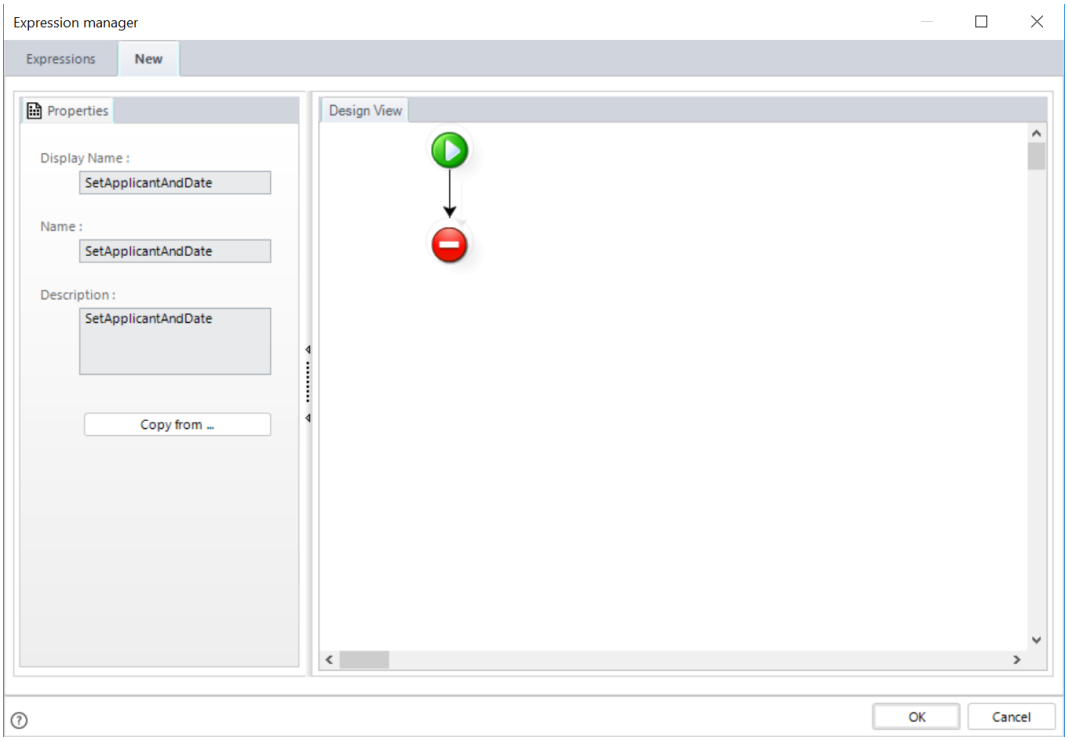

Fig. 69. Creation of new Expression.

6. Right-click the arrow and select *Add Expression*. Type *Applicant and Date* and click **OK**.

Copyright © 2024 Bizagi

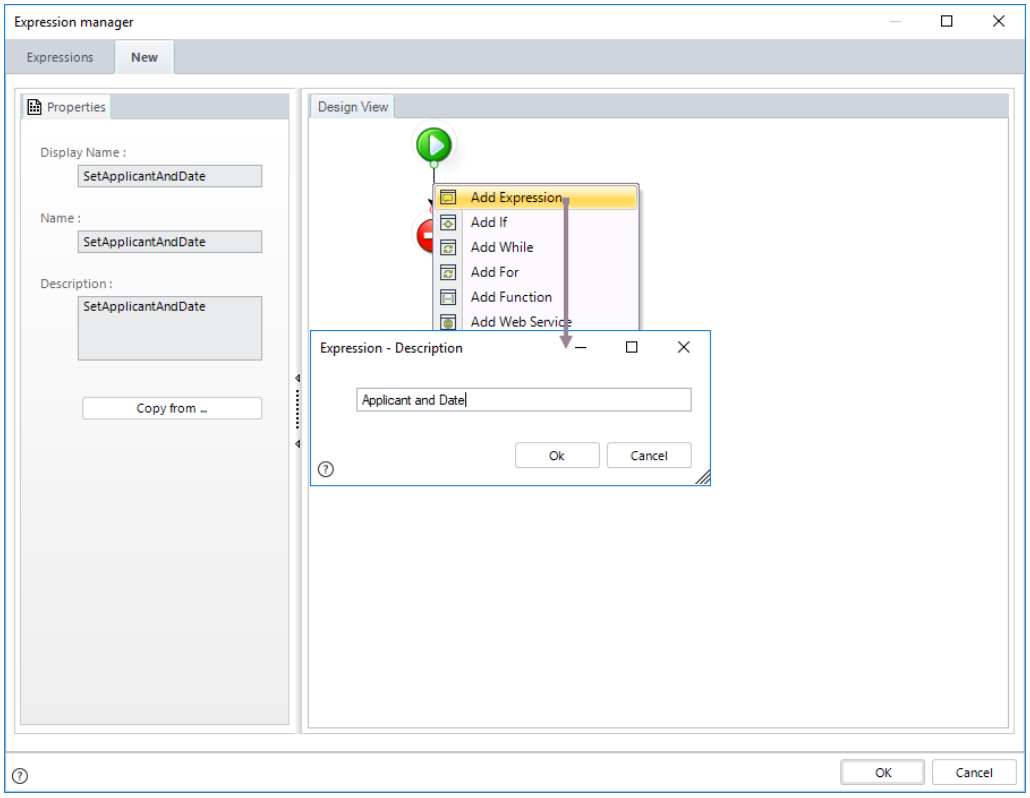

Fig. 70. Creation of new Expression.

7. Right-click the module just included and select *Properties*.

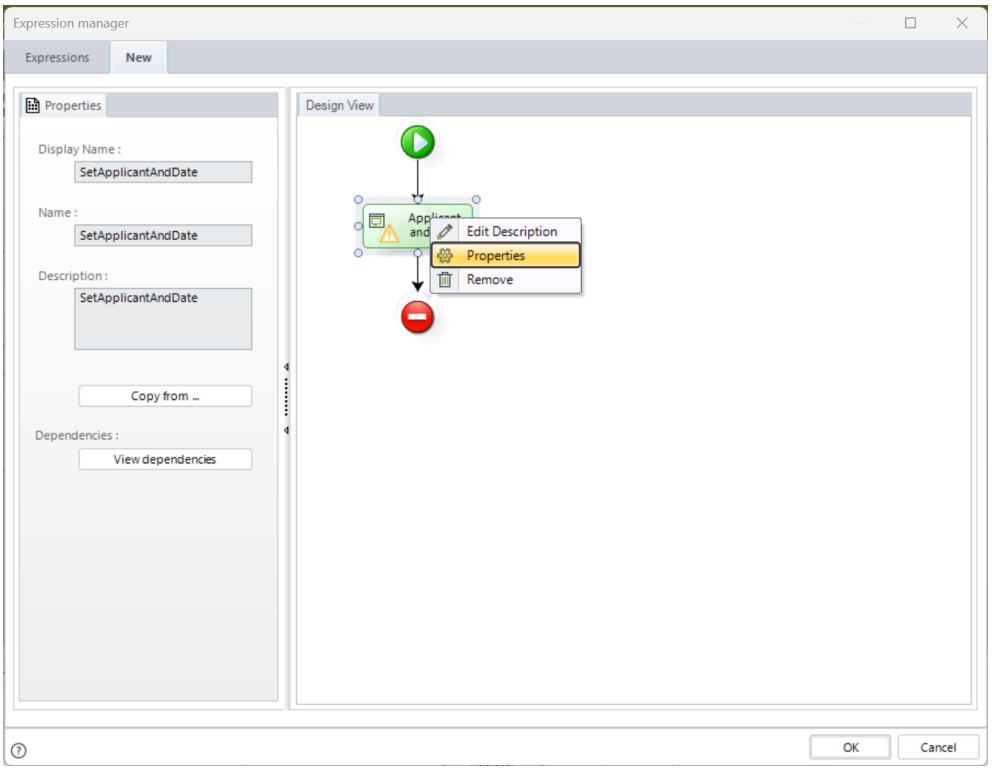

Fig. 71. Selection of Properties of the new Expression.

8. The Expression editor opens. Click Data Model and select the *Employee* attribute. Click **OK**.

Copyright © 2024 Bizagi

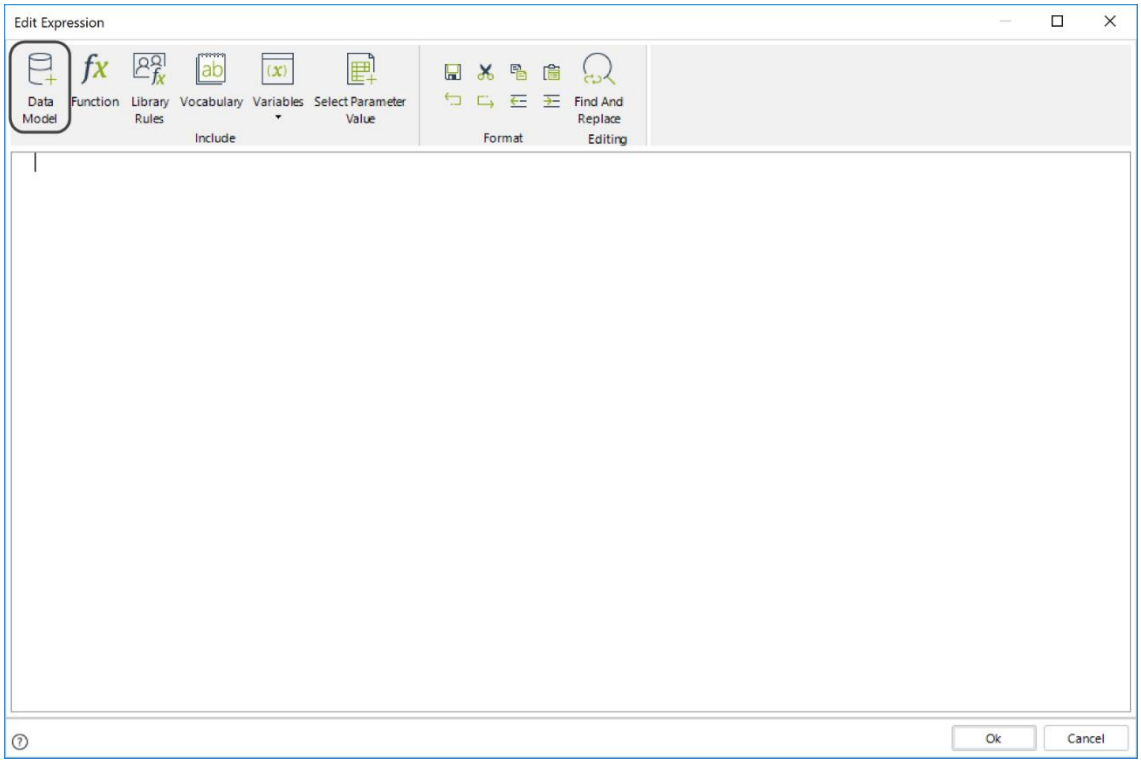

Fig. 72. Edition of Expression.

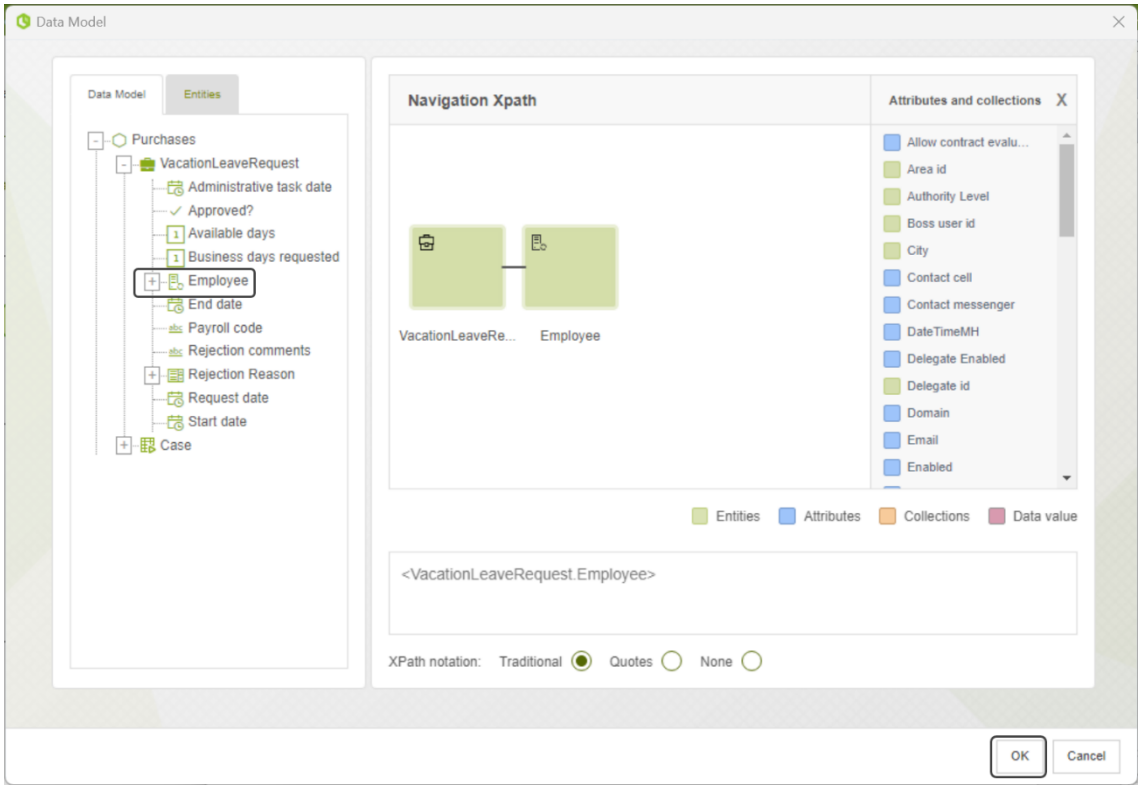

Fig. 73. Selection of the Employee attribute.

9. The Employee attribute has been added to the Expression. Now enter an equal sign and then select the *Function* option.

   Navigate to the *Case creator user* Category, and then select the *User Id of the case creator* function.

Copyright © 2024 Bizagi

Click **OK**. Add a semicolon to demarcate the statement.

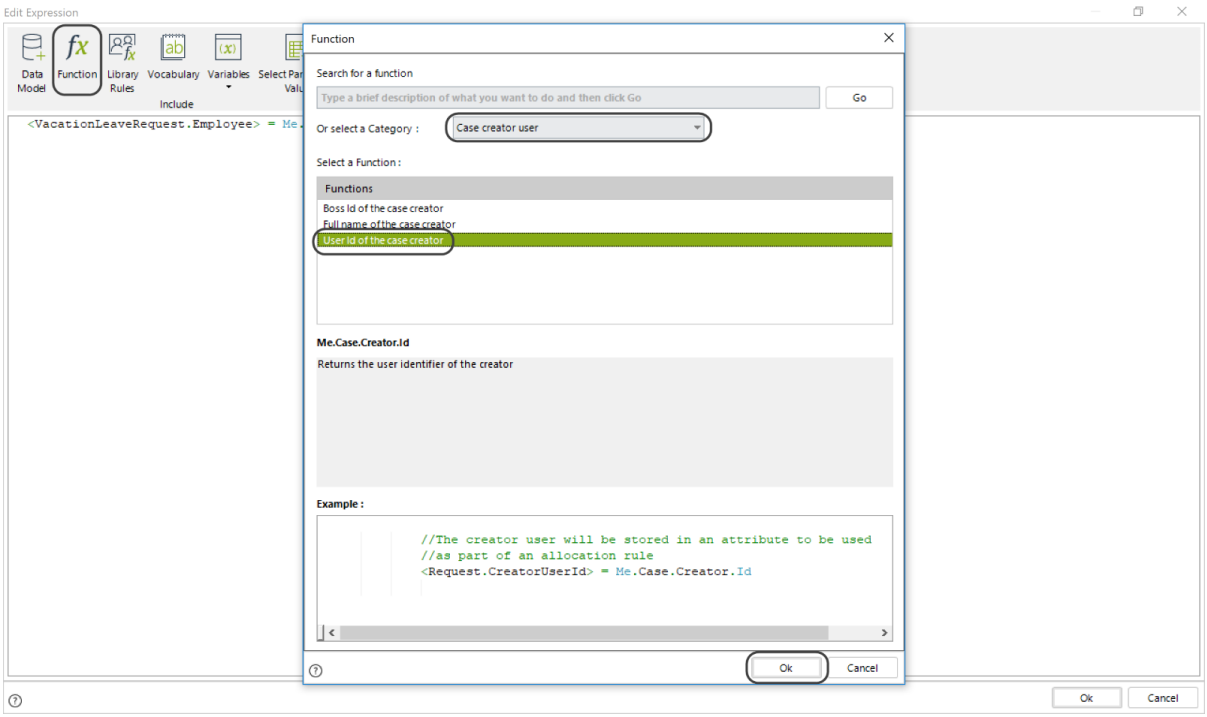

Fig. 74. Selection of the Employee attribute.

10. The first assignment is finished; the Employee user will be the case creator.

We will now set the *Request date* as the creation date. Position your cursor on the next line and open the data model. Select the ***Data Model*** option and then select the *Request date* attribute. Click **OK**.

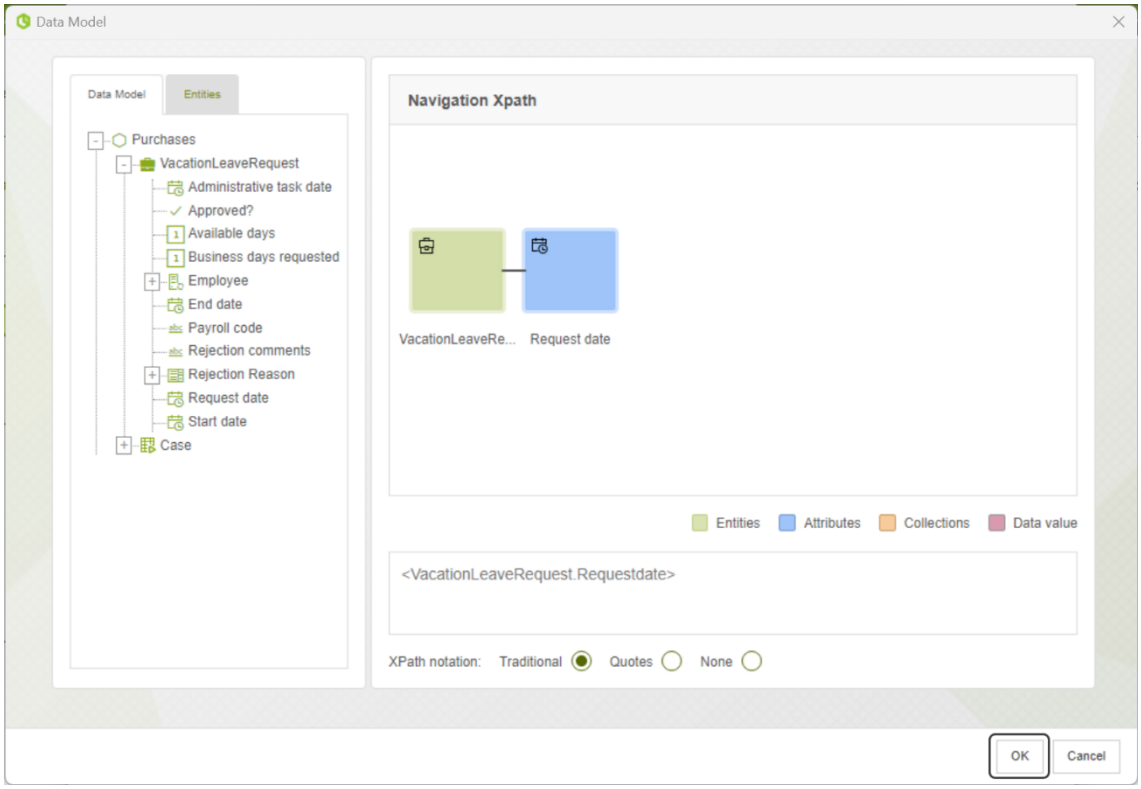

Fig. 75. Selection of the Request date attribute.

Copyright © 2024 Bizagi

11. The Request date attribute has been added to the Expression. Now enter an equal sign and then select the *Function* option.

Navigate to the *Date & time* Category, and then select the *Today* function. Click **OK**.

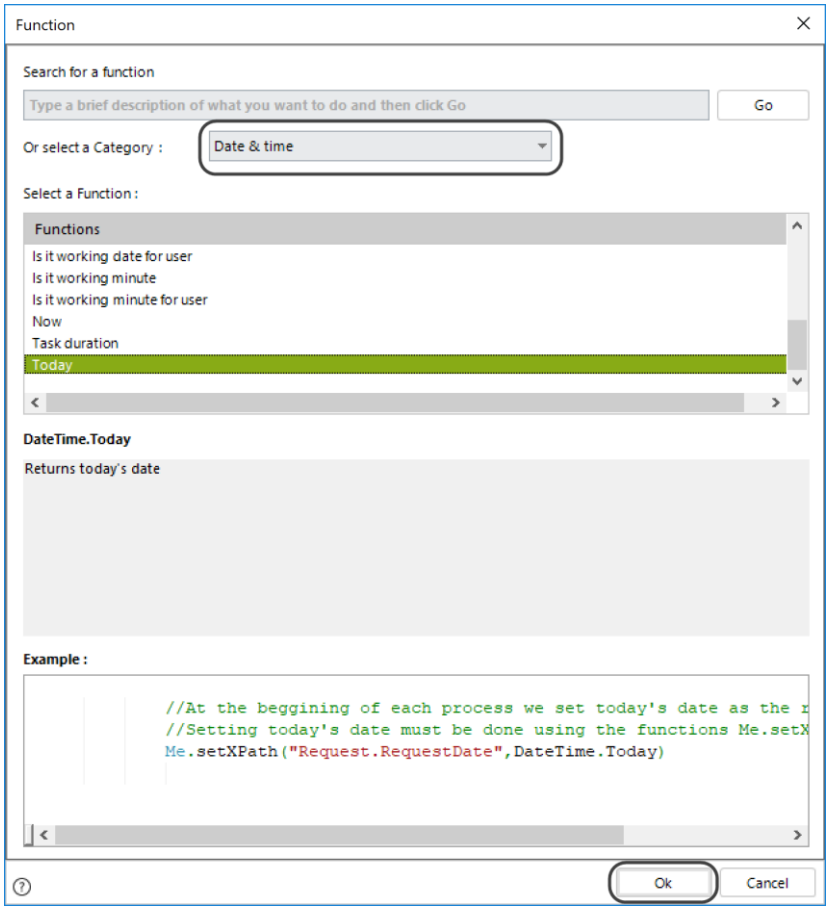

Fig. 76. Selection of the Request date attribute.

Note: The difference between *Today* and *Now* is that *Today* returns only today's date, *Now* on the other hand returns today's date and the exact time (hour, minute, second).

12. Click the **OK** buttons to save the assignments, save the rule and close the Activity Actions editor.

Copyright © 2024 Bizagi

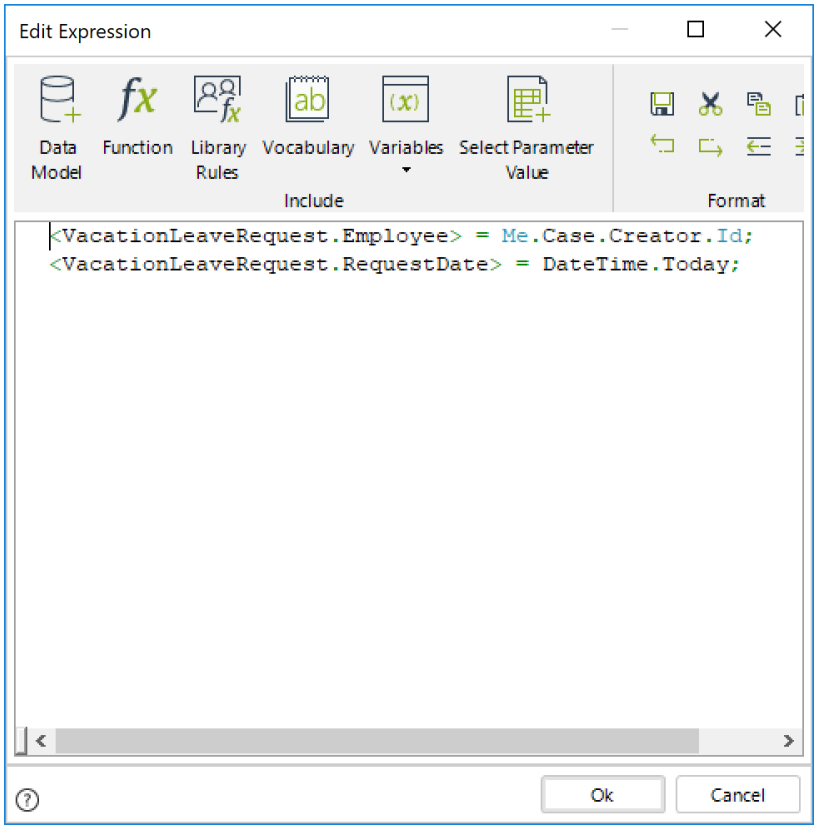

Fig. 77. Expressions of Employee and Request date.

13. Return to the Process Wizard by clicking on Home in the drop-down menu in the upper right corner of the diagram space.

Performers

The Performers assignment is a very important stage within Bizagi. The responsible resources for each one of the Process activities are defined in this stage.

Bizagi identifies the relationship that exists between the different employees based on the variables that characterize and differentiate them. Thanks to this functionality, Bizagi has the capacity to allocate Activities to the different company members.

First, we must define what would be an appropriate assignment for each one of the Process activities; later, the configuration will be completed in Bizagi:

- The access to the Vacation Leave Request Process is an internal process that must be available for all the employees of the organization. Thus, the first Activity must always be available for anyone who creates the case.
- The employee's supervisor will ALWAYS complete the Activity Approve leave request.
- The user who submitted or created the request will ALWAYS complete the Activity Inform Reject Reason. (The reason for rejection is completed by the supervisor but ALLOCATED to the requester).
- The Inform Reject Reason Activity should ALWAYS be allocated to the person who submitted or created the case.
- The Human Resources Assistant will ALWAYS be responsible for the Register vacation leave Activity.

To configure the named allocations, go to the fifth step of the Process Wizard.

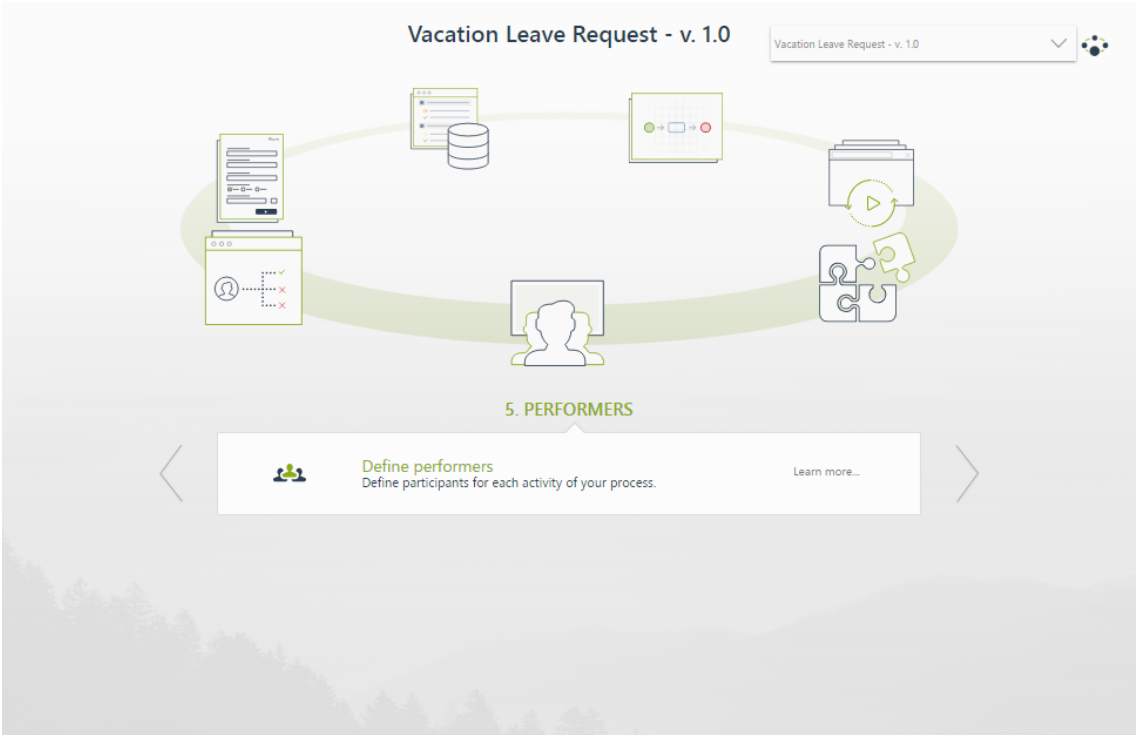

Fig. 78. Performers step in the Process Wizard.

The activities that do not have a Performer configured are highlighted in the workflow.

Copyright © 2024 Bizagi

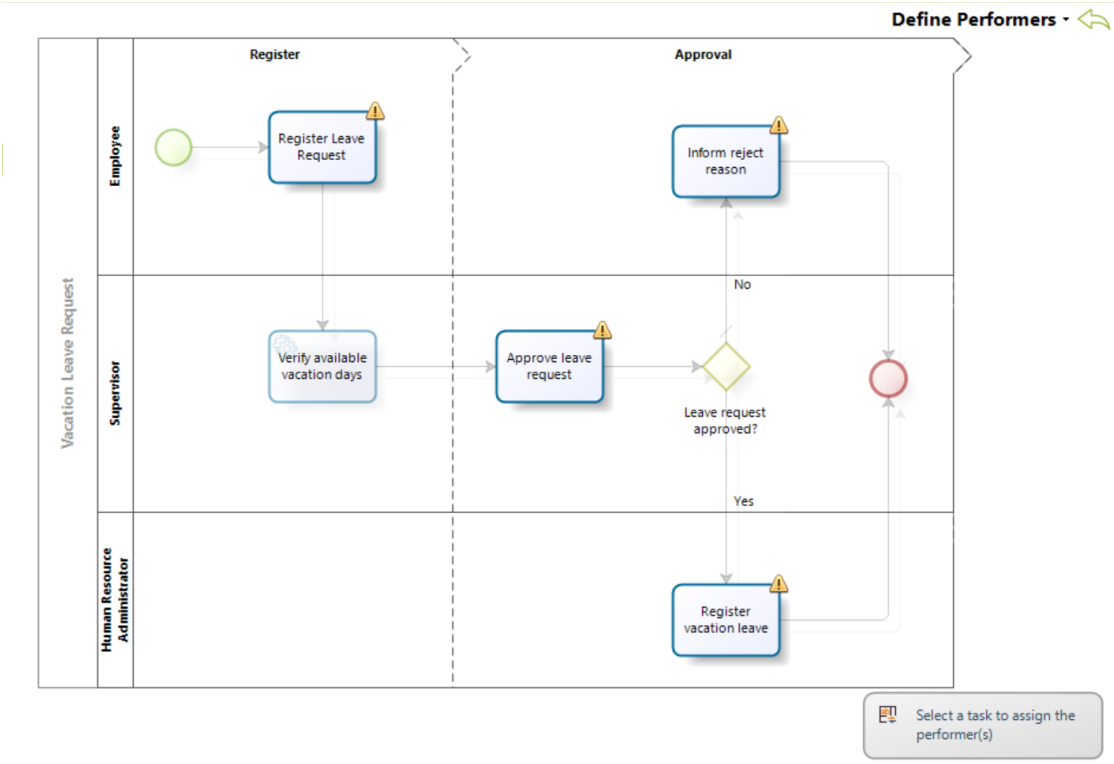

Fig. 79. Workflow diagram where missing Performer configuration is highlighted.

Activity: Register leave request

This Activity must be assigned to the creator of the case; this is a default functionality Bizagi provides, so we don't have to create an assignment for it.

Activity: Approve leave request

1. Select the Activity by clicking it, the Performers assignment window will appear.

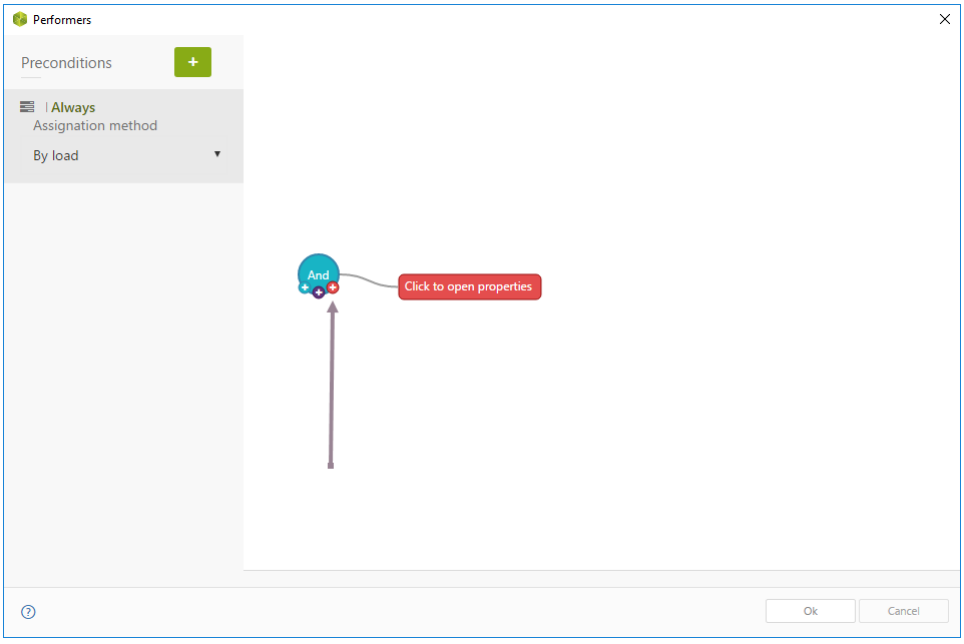

Fig. 80. Performer assignment window.

2. Click **Add condition** (this is the red plus sign at the edge of the blue *And* circle).

Copyright © 2024 Bizagi

Note: The different circles at the edge of the main circle correspond to different things: The little blue plus circle corresponds to the addition of an *And*. The purple plus circle corresponds to the addition of an *Or*. Finally the red plus circle corresponds to the addition of the condition related to that *And* or *Or*. See Fig. 77.

Remember that the main circle can also be an *Or*. See Fig 78.

Fig. 81. And condition with its associated conditions.

Fig. 82. Or condition with its associated conditions.

3. In the new window we will select the Supervisor as the performer. Select *User Id* and then in the Value section press the plus button on the right side next to the word expression.

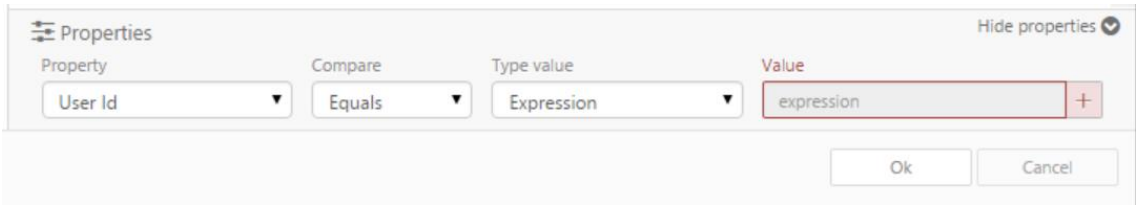

Fig. 83. Performer Expression creation.

4. The list of system expressions is displayed.

Copyright © 2024 Bizagi

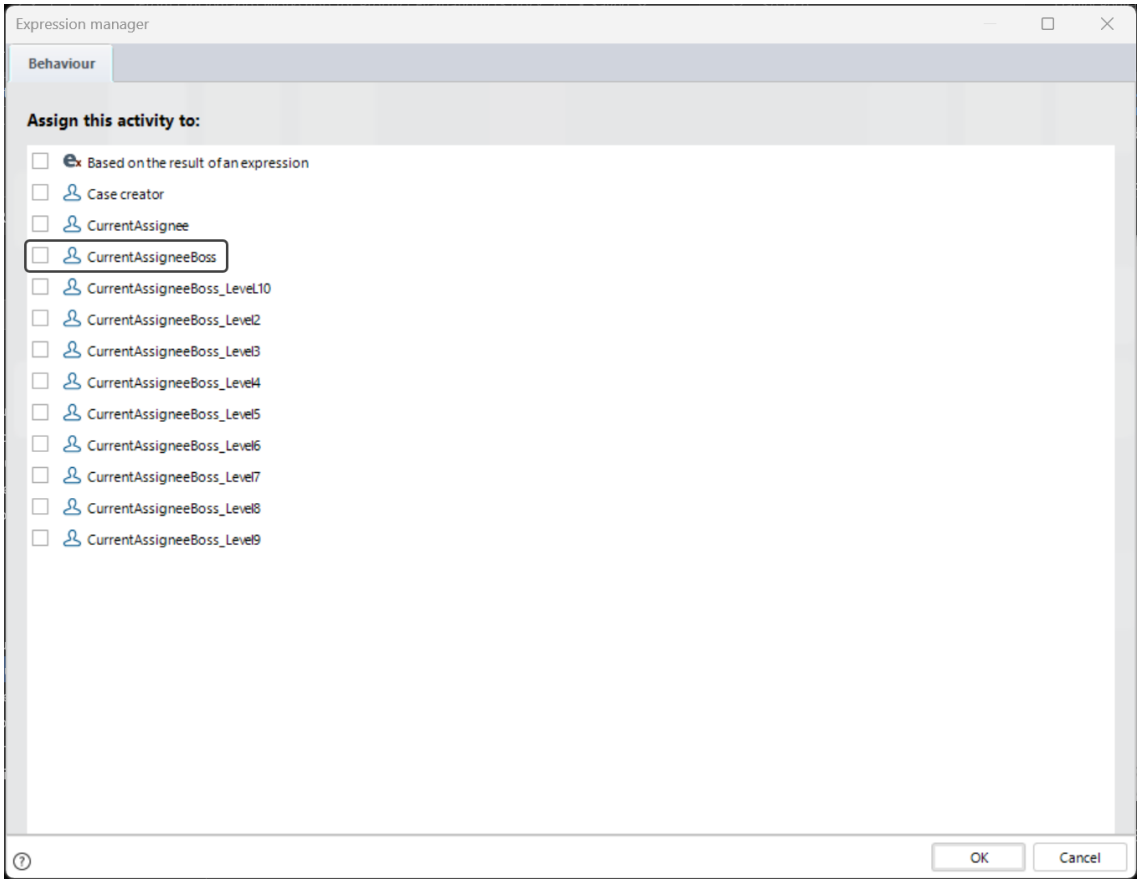

Fig. 84. Selection of CurrentAssigneeBoss value in the Expression manager.

5. Select the *CurrentAssigneeBoss* and click **OK**. This instruction automatically assigns the creator's Supervisor to the second task.

   The Expression must look like this:

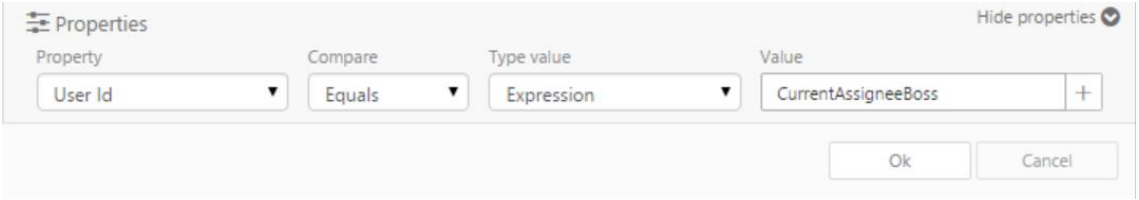

Fig. 85. Final Expression.

6. Click **OK** to save the Performer Condition and *OK* again to save the performer.

Activity: Register vacation leave

1. Repeat steps 1 and 2 of the *Approve leave request* Activity but for the *Register vacation leave* Activity. This task is performed by an employee in the Human Resource department holding a position of Human Resource Assistant.

Copyright © 2024 Bizagi

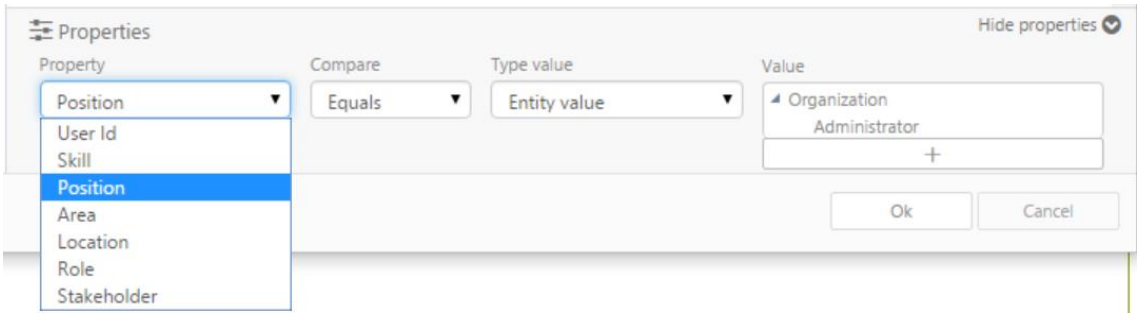

Fig. 86. Expression creation using the Position Property.

2. Since we have no Positions created, we will create one:

   In the first drop-down list, select Position. A new drop-down list is enabled at the right. Select *Organization*. This enables the **New** link.

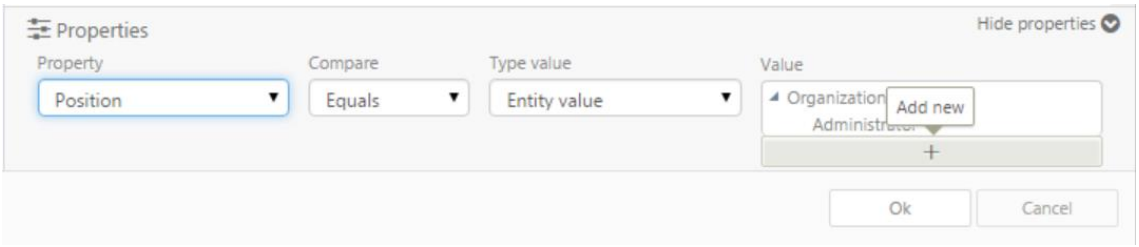

Fig. 87. Expression creation adding a new Value.

3. Type *Human Resources Assistant* and click on the green tick, finally click on the Ok button to save the Assignment.

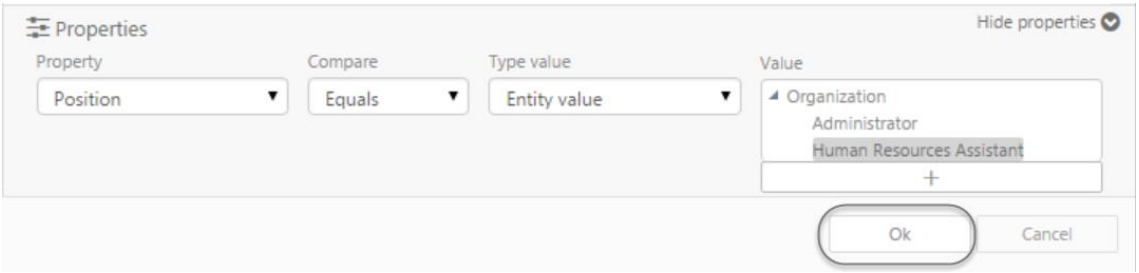

Fig. 88. Expression creation adding a new Value.

Activity: Inform reject reason

The *Inform Reject Reason* Activity should ALWAYS be allocated to the person who created the case.

1. Repeat steps from 1 to 4 of the *Approve leave request* Activity but for the *Inform reject reason* Activity.
2. Select the Case Creator of the case and click **OK** to save the condition.

Copyright © 2024 Bizagi

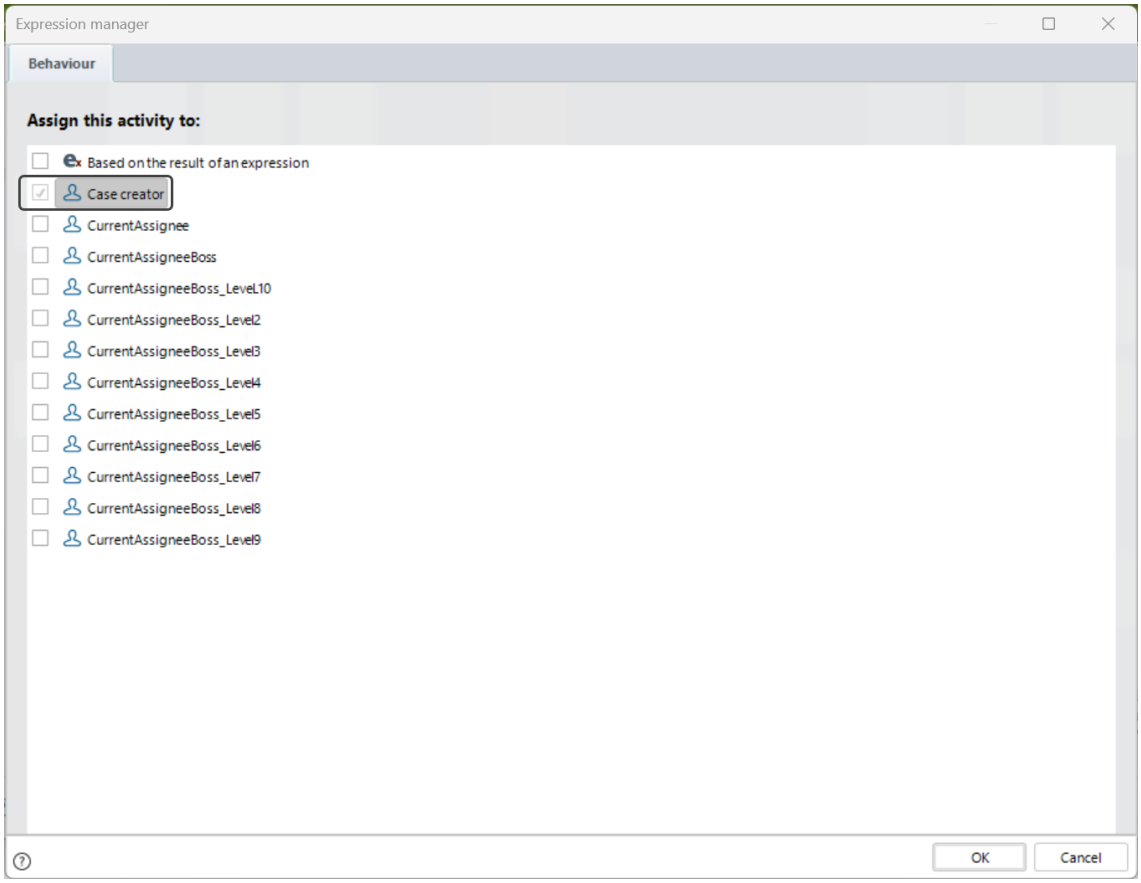

Fig. 89. Selection of Case creator in the Expression manager window.

3. Save the rule by clicking **OK** for the Performers window.

   Close the Diagram by clicking the < **Back to Wizard** button located at the top right corner of the screen to return to the Process Wizard.

Integrate with other applications

Web Services will be used to integrate the Bizagi Process with the payroll system. It exposes a service that returns the number of available vacation days for a specific employee.

Invoke Web service from Bizagi

1. From the Project Wizard go to the sixth step and select *Define Integration Interfaces*.

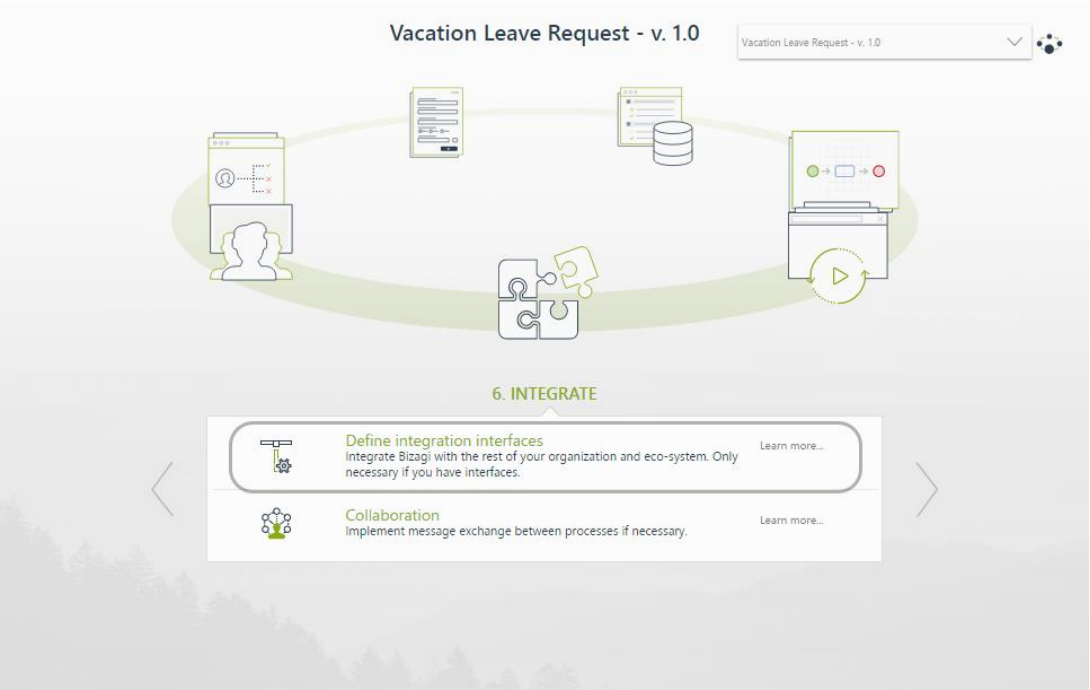

Fig. 90. Selection of the Define integration interfaces button in the 6th step of the Process Wizard.

2. A view of the Process is presented. In this view, only the service Tasks are going to be active. Click the task *Verify Available Vacation Days*.

Copyright © 2024 Bizagi

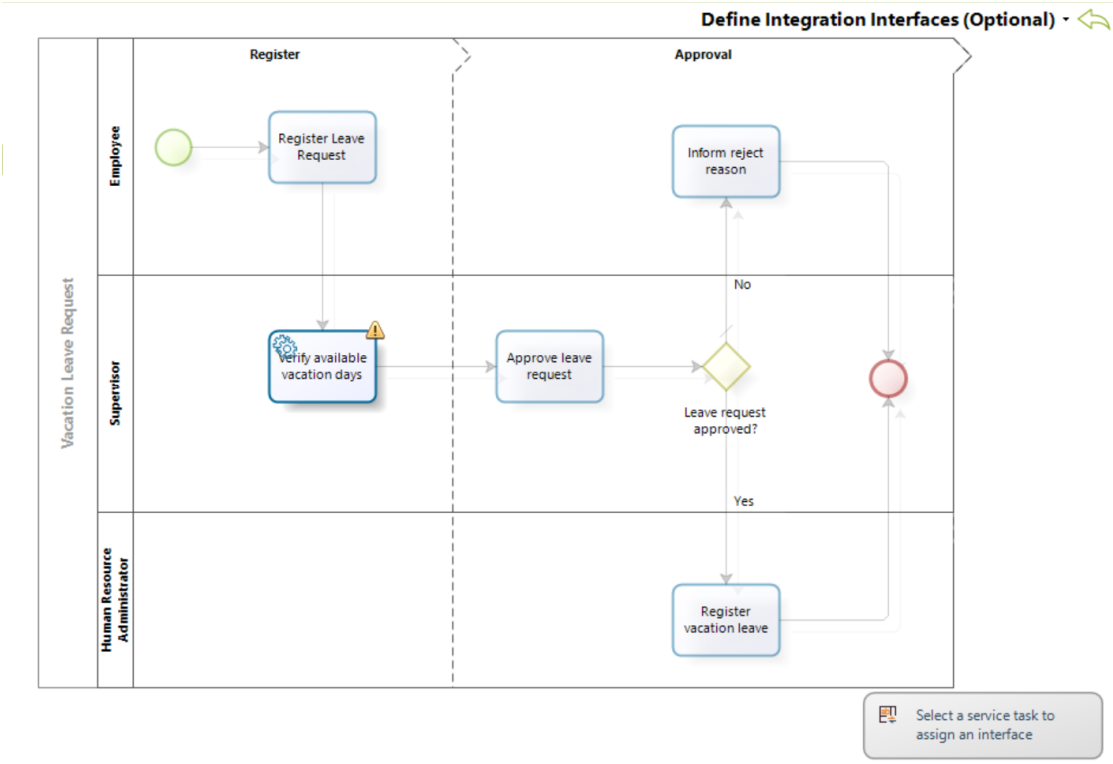

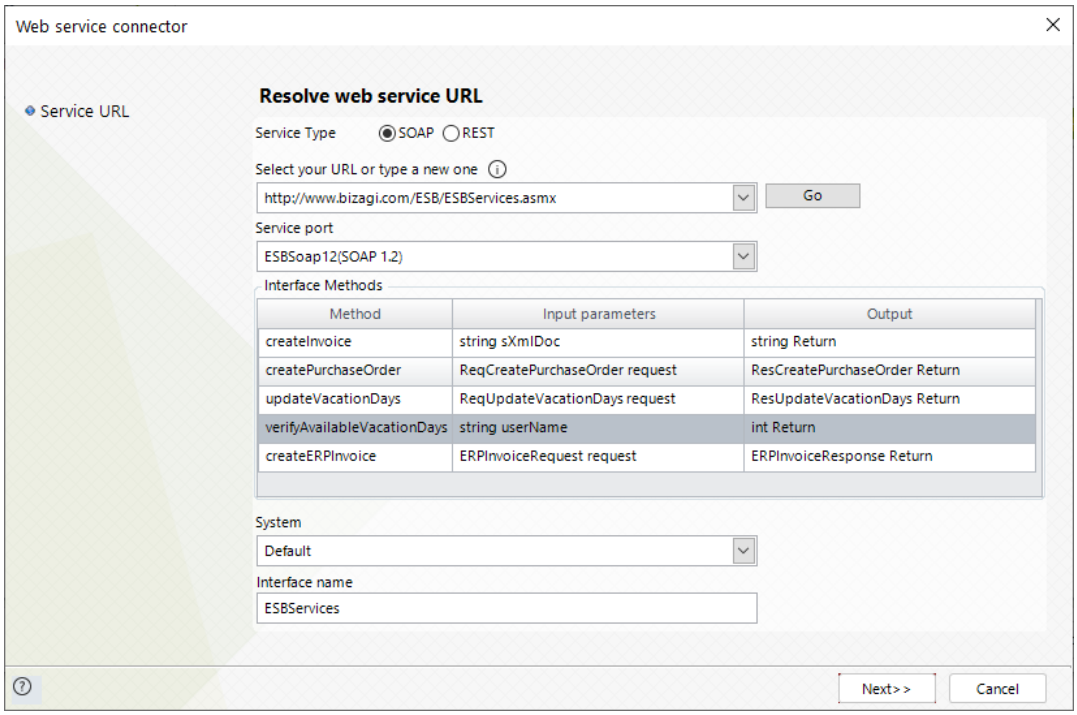

Fig. 91. Process seen in the Define Integration Interfaces stage.

3. The Interface Wizard opens. Type the URL.

   https://legacy.bizagi.com/ESB/ESBServices.asmx

   a. Click **Go** to see the available methods (this operation could take some time to finish). Select the method *verifyAvailableVacationDays* and click **Next** (the System and Interface Name take default values that can be change if desired).

Copyright © 2024 Bizagi

Fig. 92. Integration Wizard.

4. In this step the information from Bizagi to the web service will be configured. Two tables are shown, on the left is Bizagi's data model and on the right the information the web service method expects.

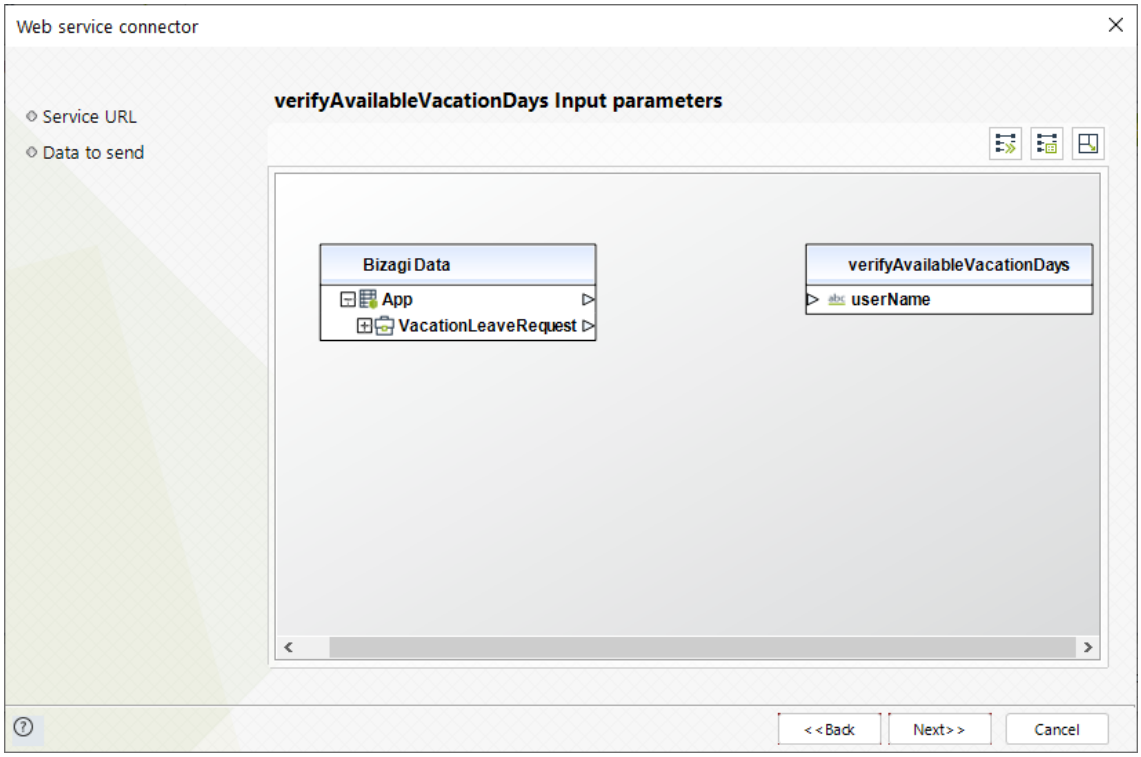

Fig. 93. Web Service Connector.

Since the Employee's (Applicant) username is used to obtain the available Vacation Days, in the Bizagi Data table, expand the *VacationLeaveRequest* element and go through the entities tree until you see the Employee's username.

Once the desired attribute is reached, click the *userName* attribute, and then click the *UserName* parameter at the right this automatically connects the two items.

Copyright © 2024 Bizagi

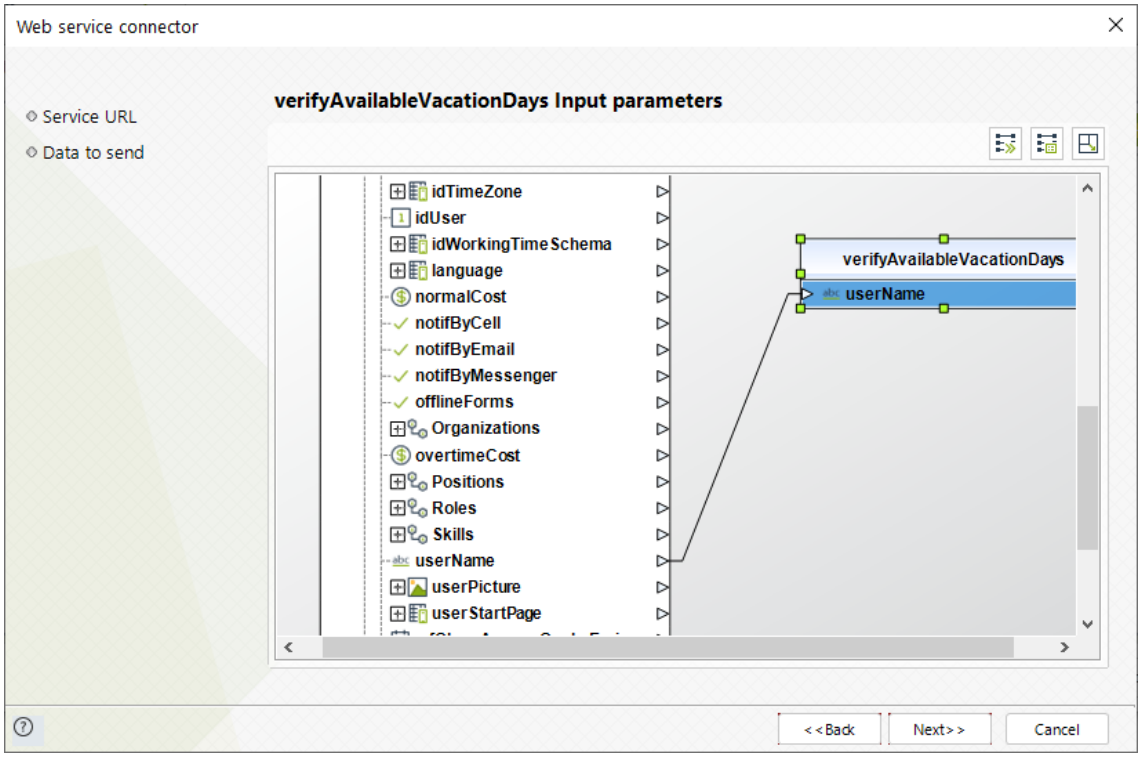

Fig. 94. Connection of the userName of the Database with the userName of the Web Service.

The tables can be moved and re-sized if needed; also, the window can be maximized using the button at the upper right corner.

If the window is maximized, restore it to see the taskbar again and click **Next** to continue.

5. In the next window select we need to select where in Bizagi's data model, the web service response is going to be saved. As in the previous step, two tables are shown but now the table with the web service response is on the left and the one with Bizagi Data on the right.

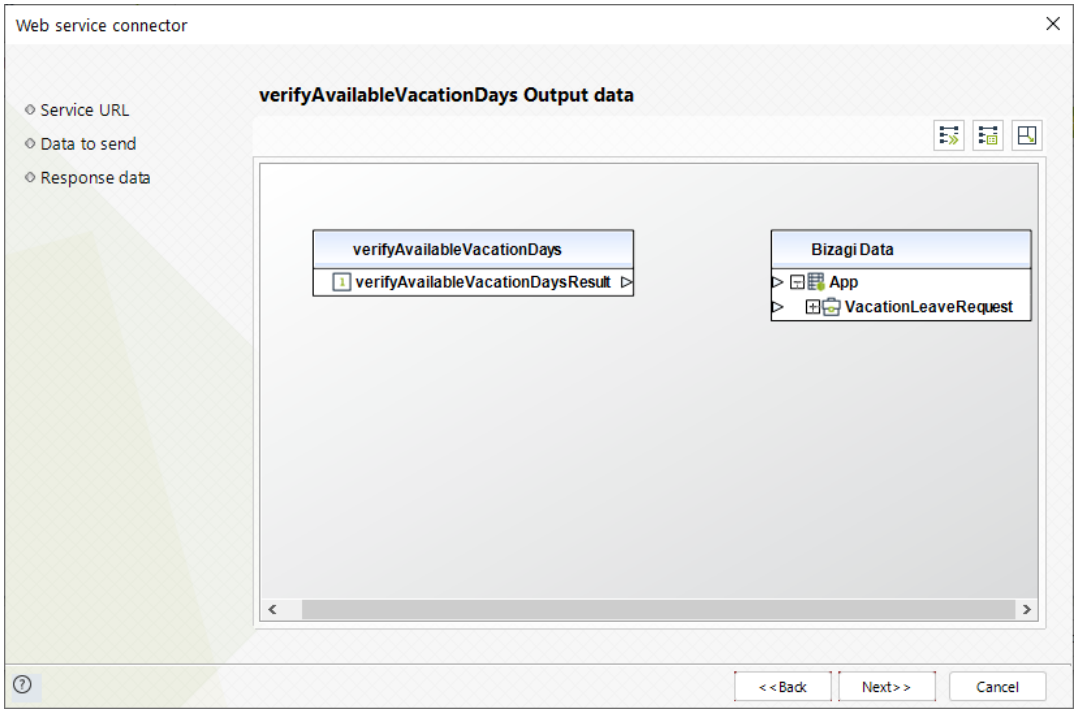

Fig. 95. Output data connection diagram.

Copyright © 2024 Bizagi

In Bizagi Data, under *VacationLeaveRequest* find the attribute *Availabledays* and match the response from the web service to this attribute. Then Click **Next**.

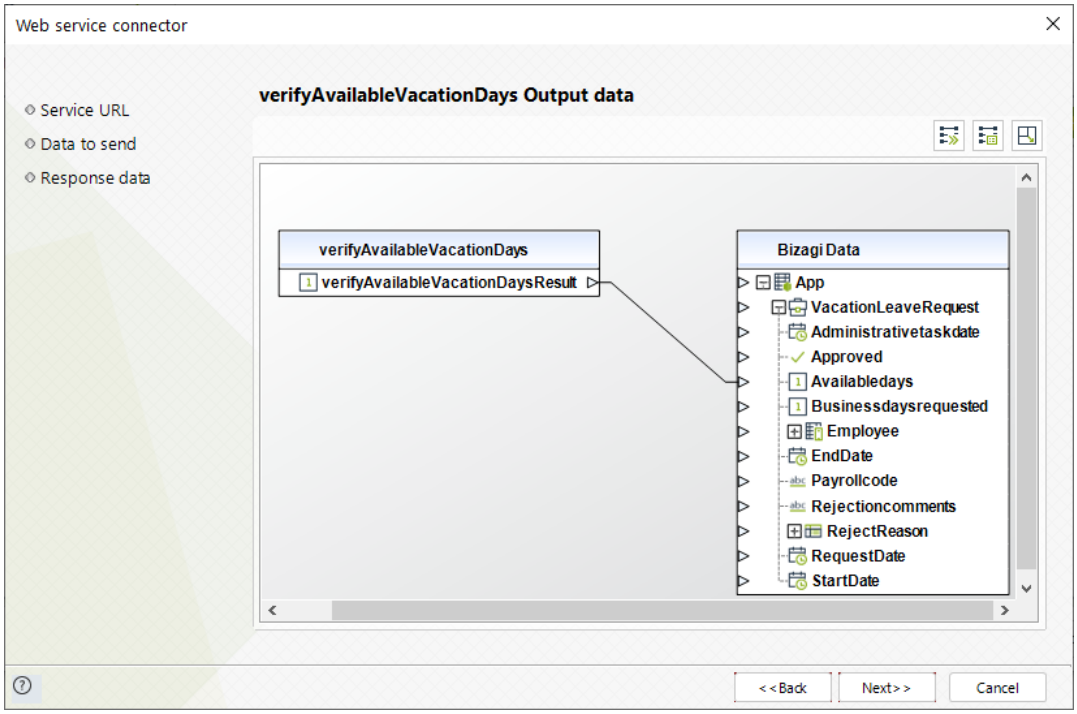

Fig. 96. Connection of result of the Web Service with the Database.

6. On the final step we will configure what to do if an error occurs, select the option *Throw Exception* from the *Action* list, and click **Finish**.

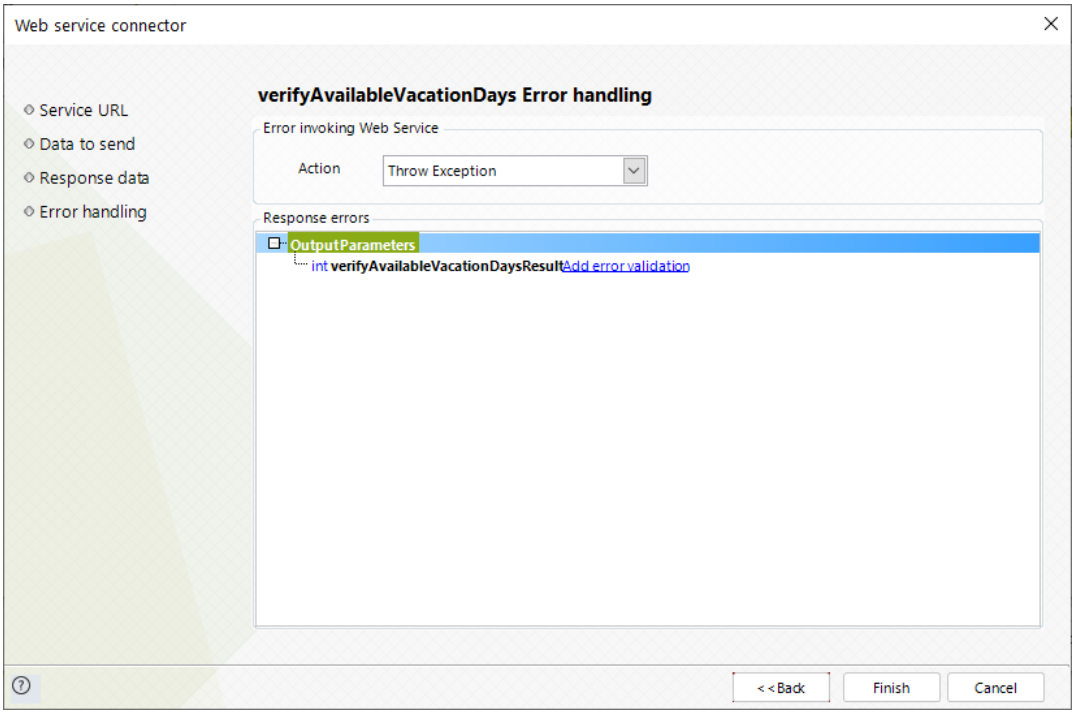

Fig. 97. Selection of Exception Action.

7. The Interface wizard will close. Return to the Process Wizard.

Work Portal

So far, the Process flow chart has been completed along with the structuring of the Process information, the Forms design for each one of the Process activities, the definition of the business rules and the Performers. Now we are ready to configure the Work Portal.

Click the seventh step of the Process Wizard. In the new window select *Run.*

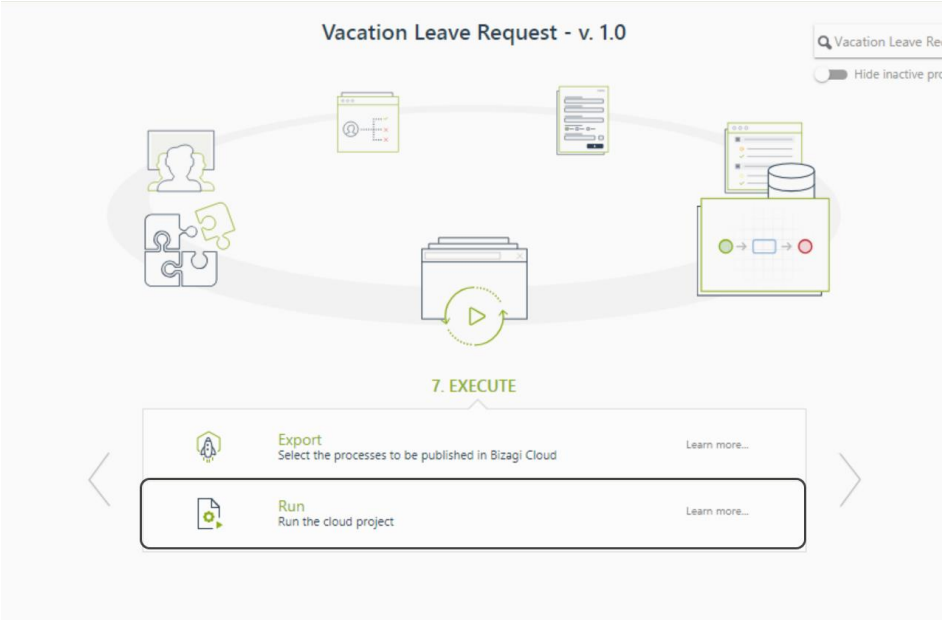

Fig. 98. 7th step of the Process Wizard.

You can also click the green icon in the Ribbon for a quick access to the Portal.

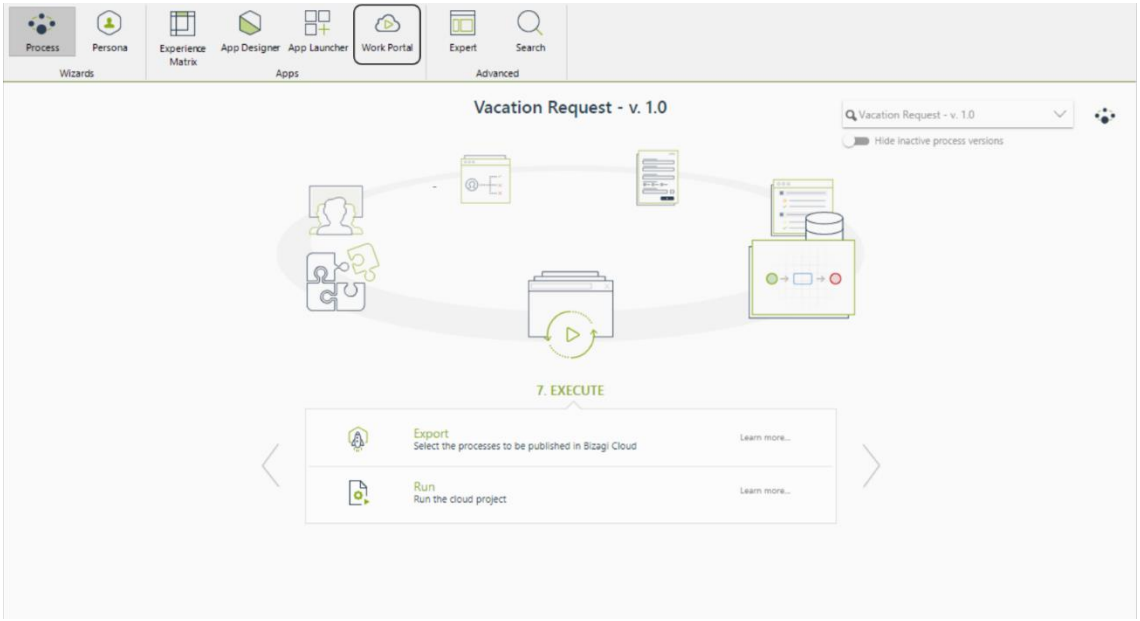

Fig. 99. Work Portal button.

Users

The work portal will need to have three users so that the behaviour of the assignments can be verified. We will now create the three users directly from the web application. The following table presents the users list.

Copyright © 2024 Bizagi

Table 4. Work Portal users.

User	Password	Domain	Immediate Supervisor	Job Title
Supervisor	Supervisor	domain		
Employee	Employee	domain	Supervisor	
Assistant	Assistant	domain		Human Resources Assistant

Supervisor

1. To create the user, select the *Admin Menu* and click the *Users* option.

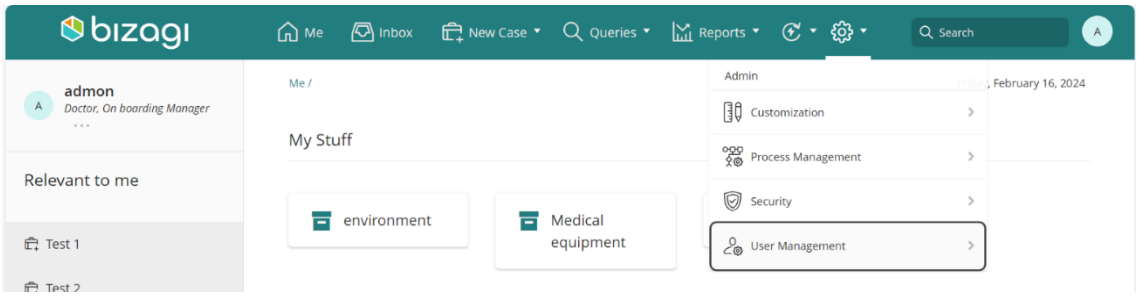

Fig. 100. Work Portal User creation.

2. Click *New User*.

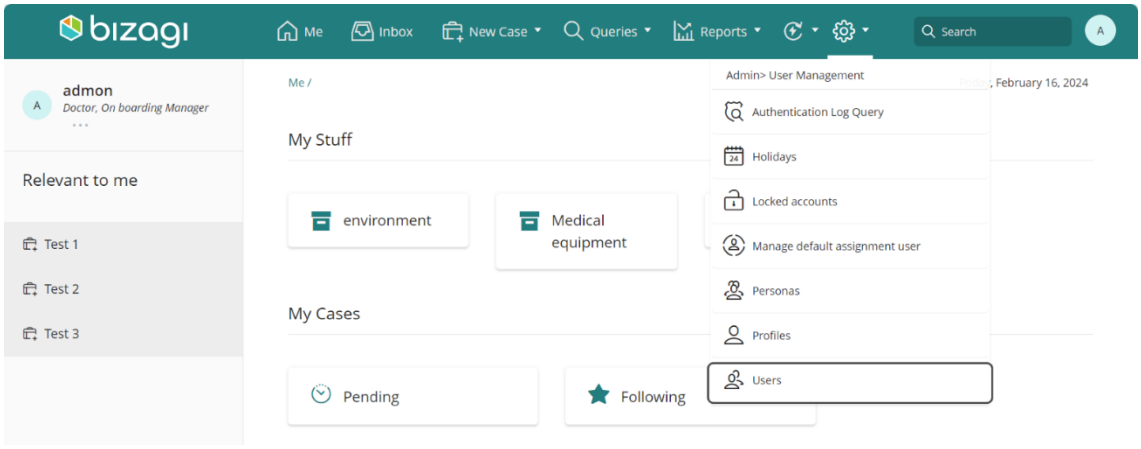

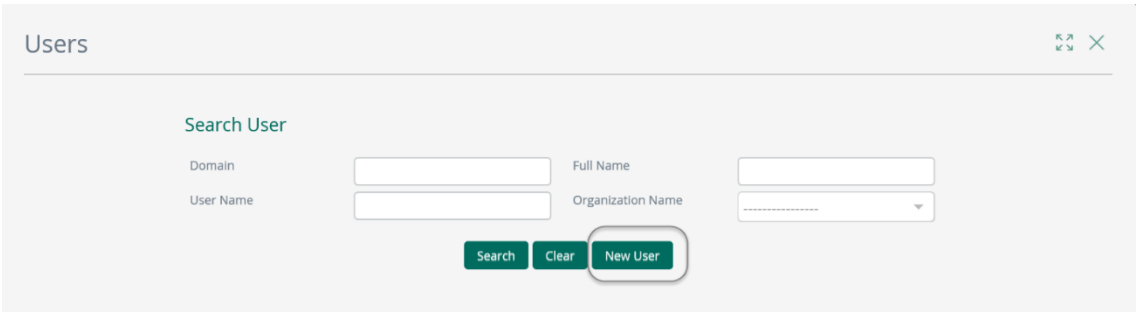

Fig. 101. Work Portal User creation.

3. Fill out the information from the user list table presented at the start of this section.

Copyright © 2024 Bizagi

Fig. 102. User creation.

BE CAREFUL to include a password you can remember or use the one in the given table. Bizagi will assign the User Name as password by default.

Deselect all checkboxes in the Basic Information tab: *Expired Password*, *Locked Account* and *Send Mail with Password to User*. Doing so bypasses authentication and *SMTP server validations*.

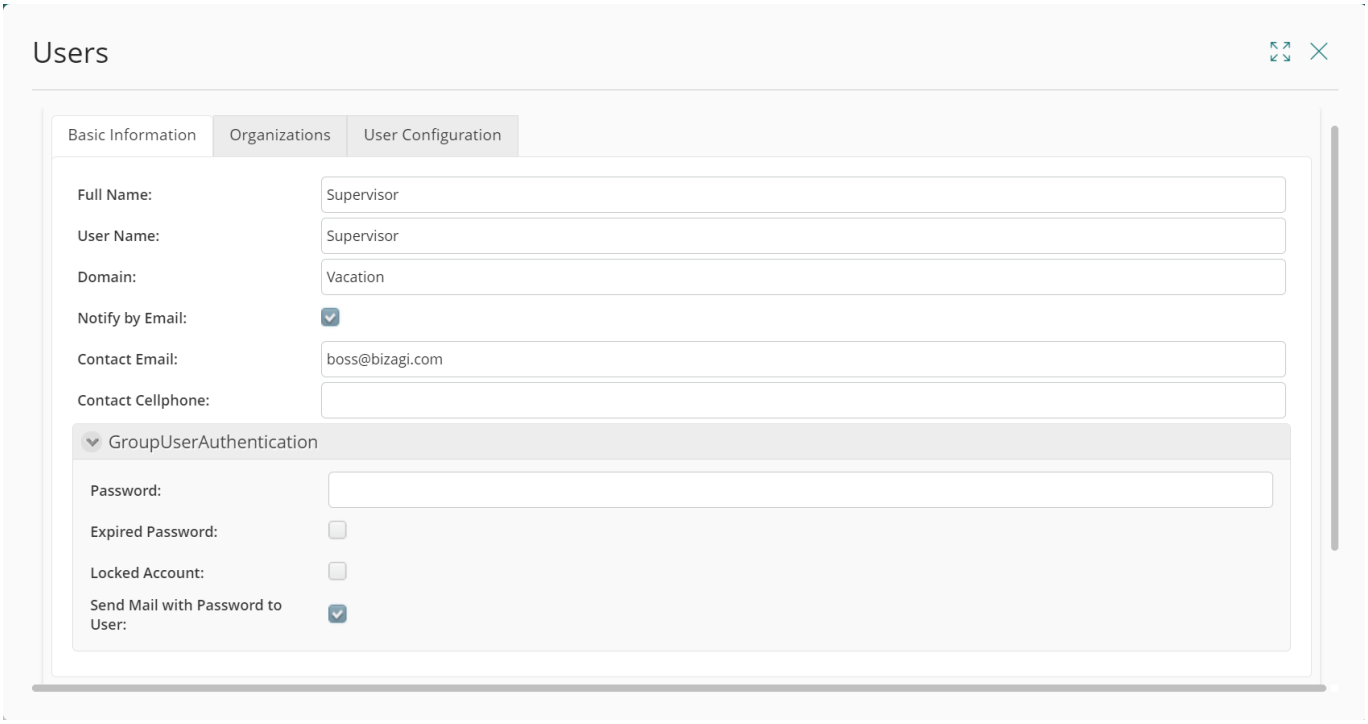

Fig. 103. Supervisor creation.

4. Go to the next tab and select the Organization from the list of Organizations by clicking >>".

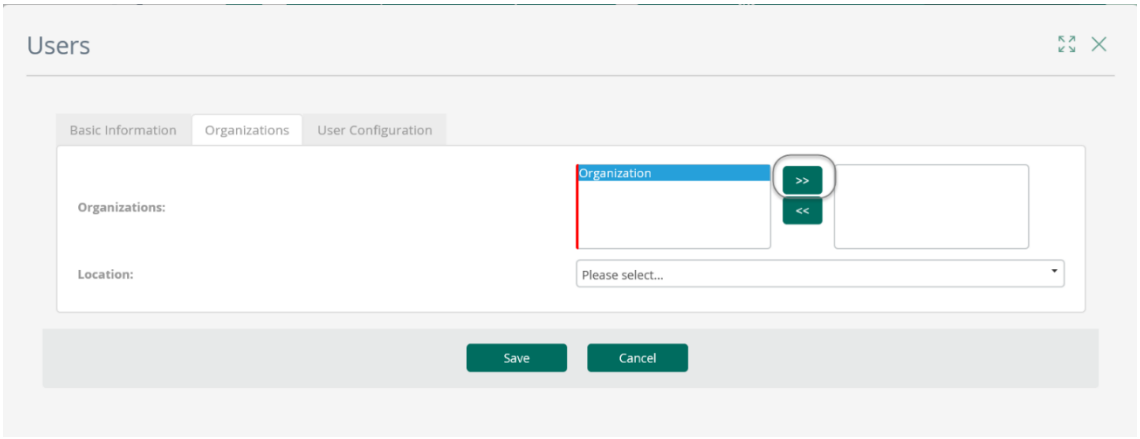

Fig. 104. Organization declaration.

5. Click **Save** to Save the Supervisor user.

Employee (Applicant)

1. Repeat steps 1 to 4 from the Supervisor user creation.

Copyright © 2024 Bizagi

2. To fill in the Supervisor field for the Employee user go to the *Configuration User* Tab and click the *Search icon* ( ).

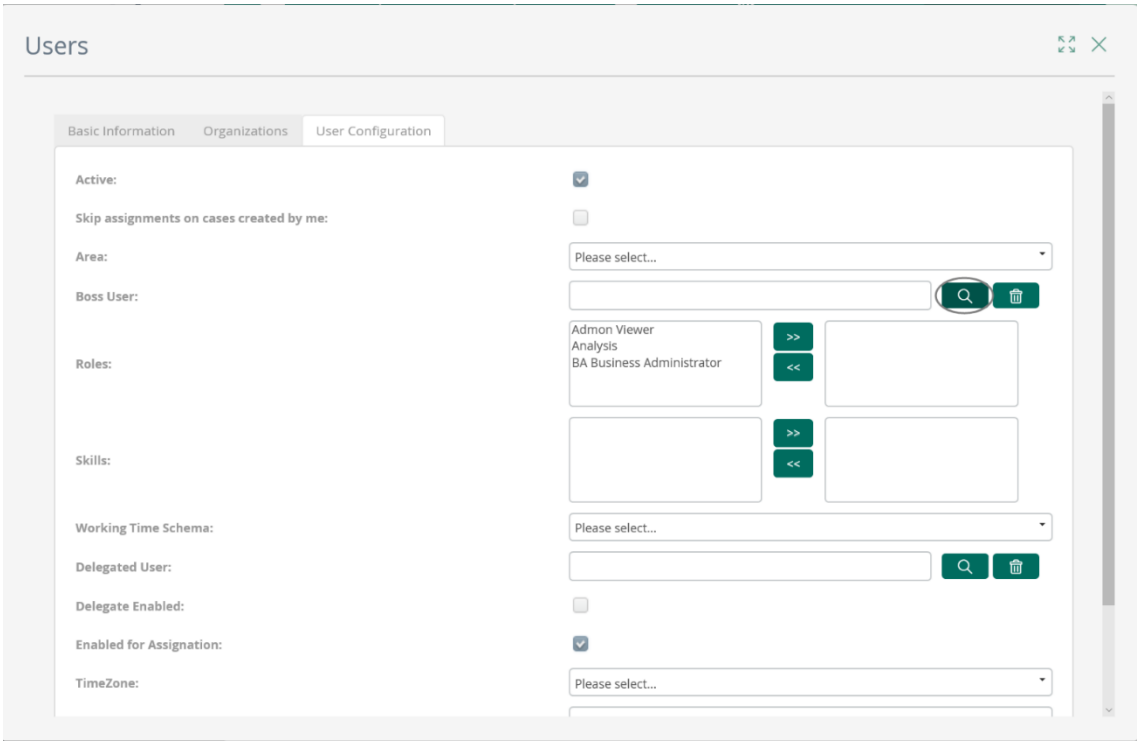

Fig. 105. User configuration.

3. Click *Select* in the Supervisor record.

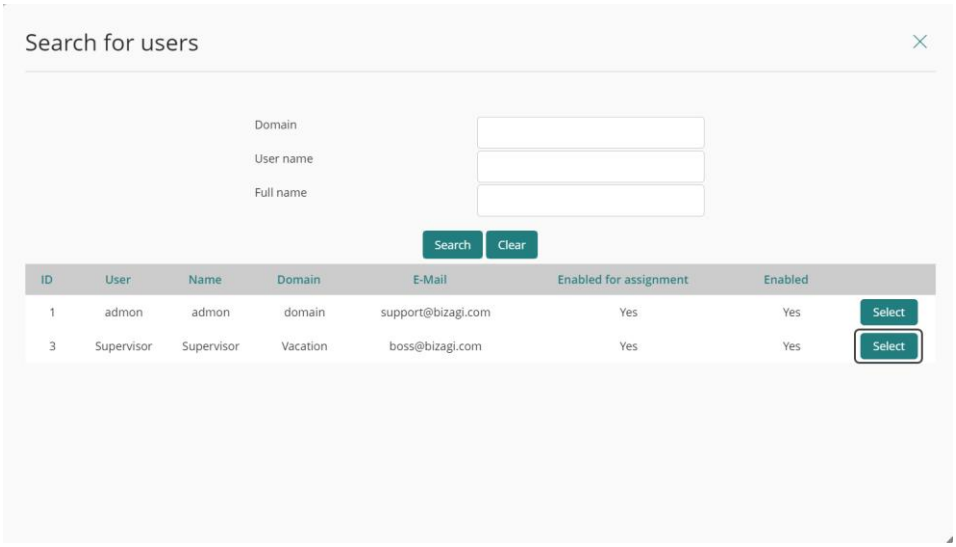

Fig. 106. User selection.

4. Click **Save** to save the Employee user.

Assistant

1. Repeat steps 1 to 3 from the Supervisor creation.

Copyright © 2024 Bizagi

2. To Add the Position for the Assistant user, go to the *Organizations* tab. Select the Organization from the list of Organizations by clicking >>".

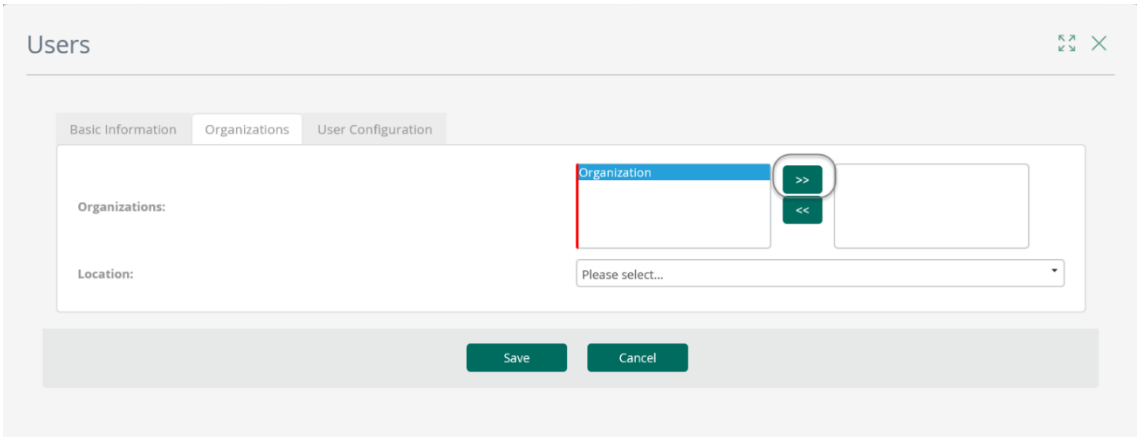

Fig. 107. Organization declaration.

3. The Organization group is displayed. Select the position you want to add and click ">>" to add it. Save the user by clicking **Save**.

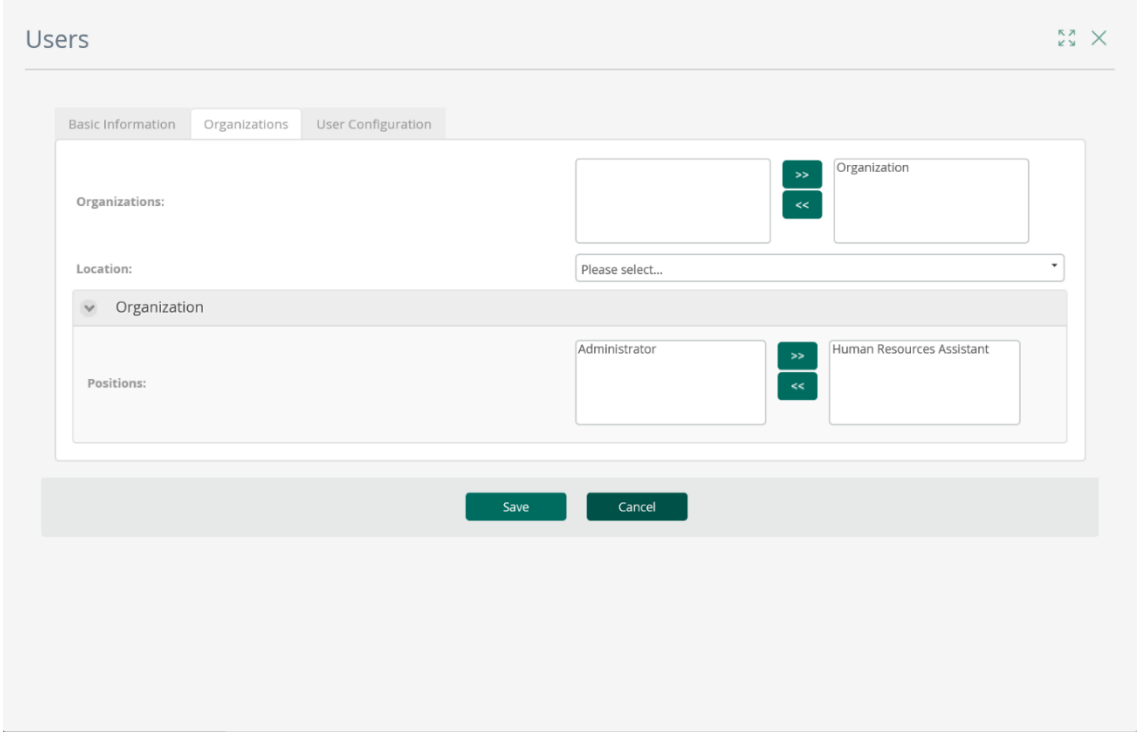

Fig. 108. Organization declaration.

Parameters

Before executing the Process, we must define rejection reasons.

1. Go to the *Model data* option in the Process Wizard, right click the Rejection Reason entity and click *Values*.

Copyright © 2024 Bizagi

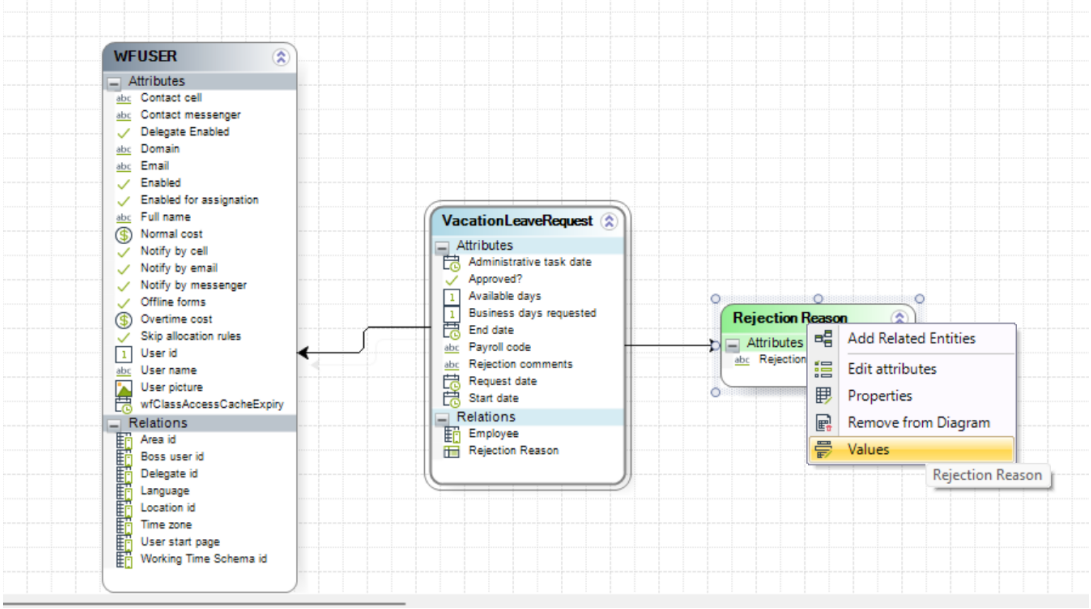

Fig. 109. Model data stage in the Process Wizard.

2. Click the *Reject Reason* button at the bottom of the new window.

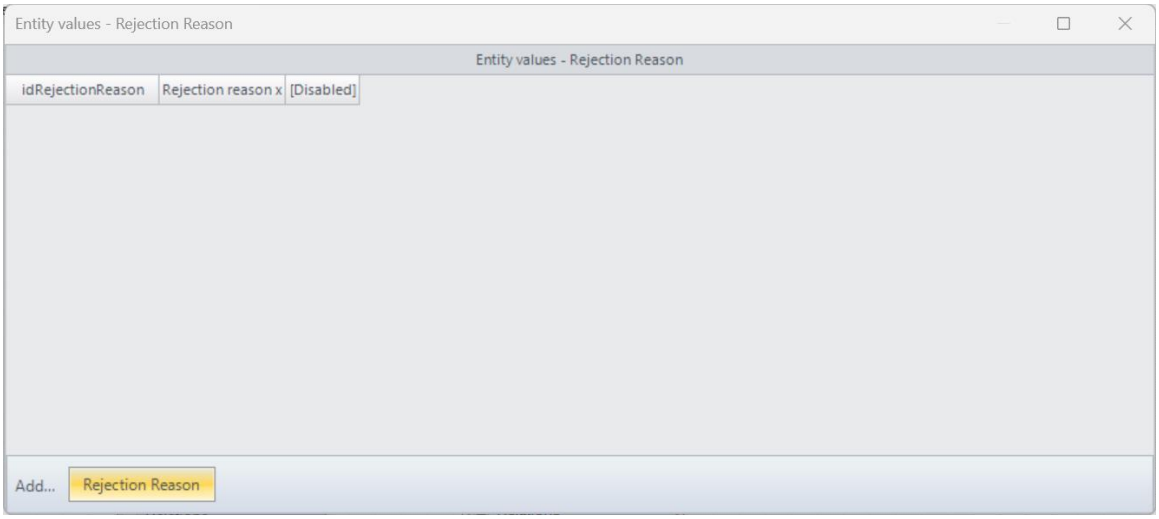

Fig. 110. Creation of rejection reasons.

3. Enter the possible rejection reasons:

Table 4. Rejection Reasons.

Reject Reasons

Commitments make it impossible to take vacations on that date.
No replacement available.
Important event on the requested date.
No available days.
Other reason.

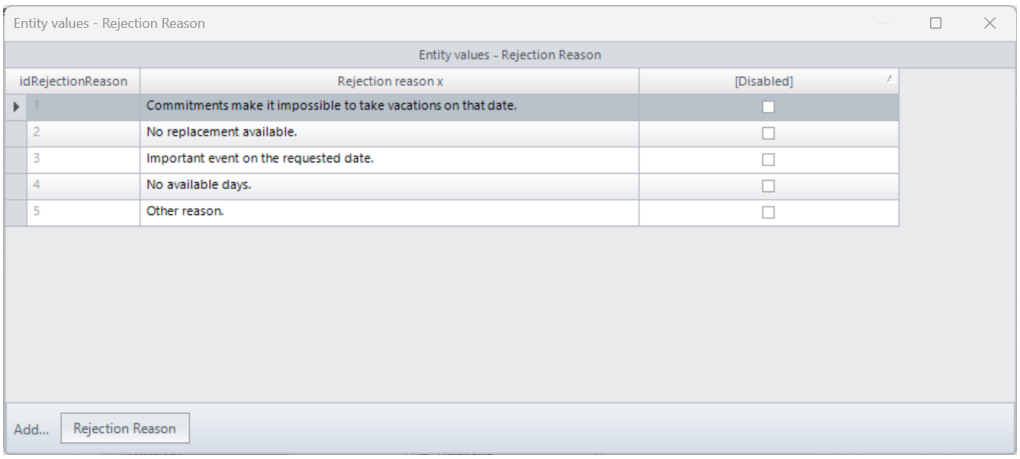

Fig. 111. Rejection reasons.

4. Save the model and click **Close**.

Testing the Work Portal

We will verify the Process after the information for the Parameter entities and users has been entered.

Open the Work Portal.

You'll be asked to enter one of the credentials for the users created. Enter the application using the Employee User:

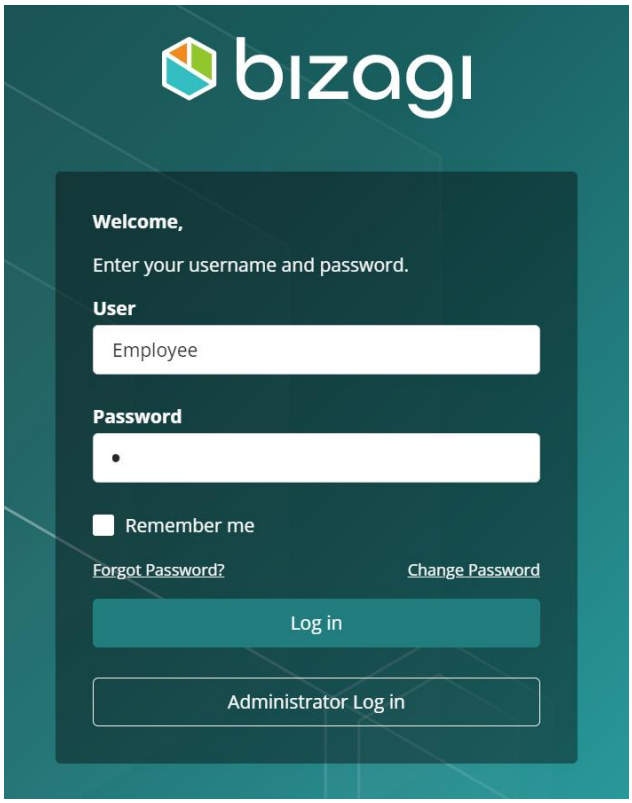

Fig. 112. Bizagi login screen.

NOTE: If you have problems logging into the Work Portal check our Trouble shooting section, items 3 and 4.

1. Click the **New** option and select the name of the Process: *Vacation Leave Request*.

Copyright © 2024 Bizagi

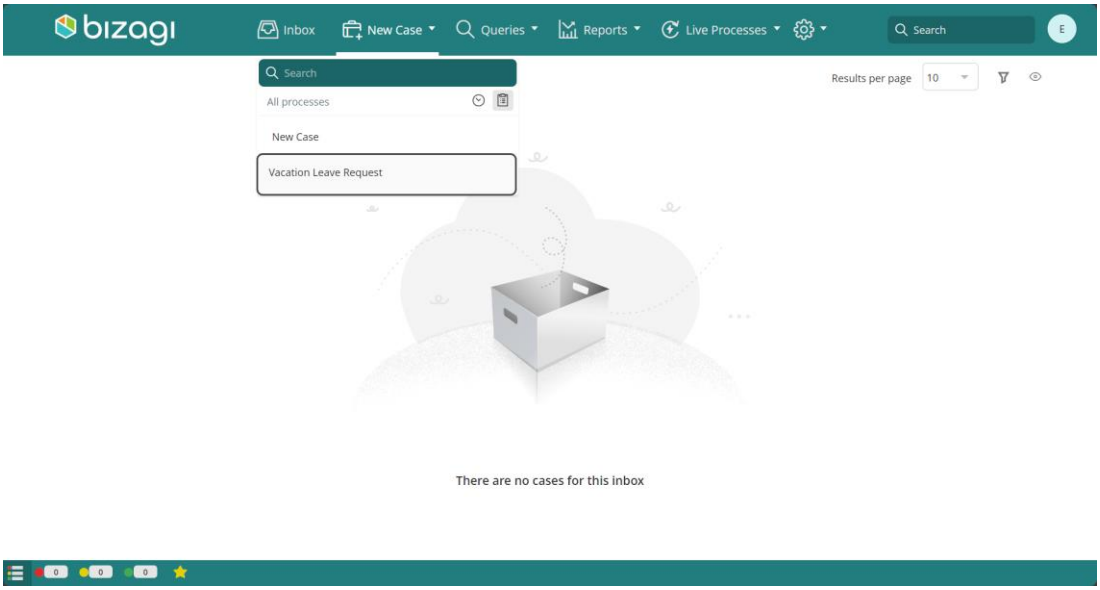

Fig. 113. Case creation.

2. Complete the information for the Activity; click **Next** to continue with the Process. You are informed that you have no pending activities for the Process. The assignee is now the Supervisor.

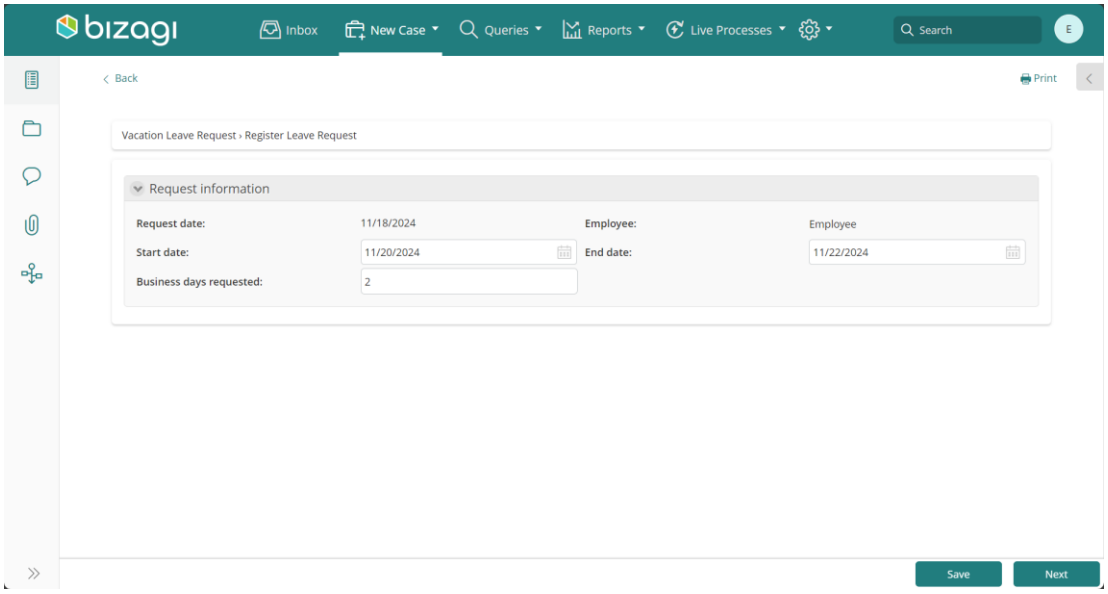

Fig. 114. Case creation.

3. Log out from the application and Log in again with the *Supervisor* user.

Copyright © 2024 Bizagi

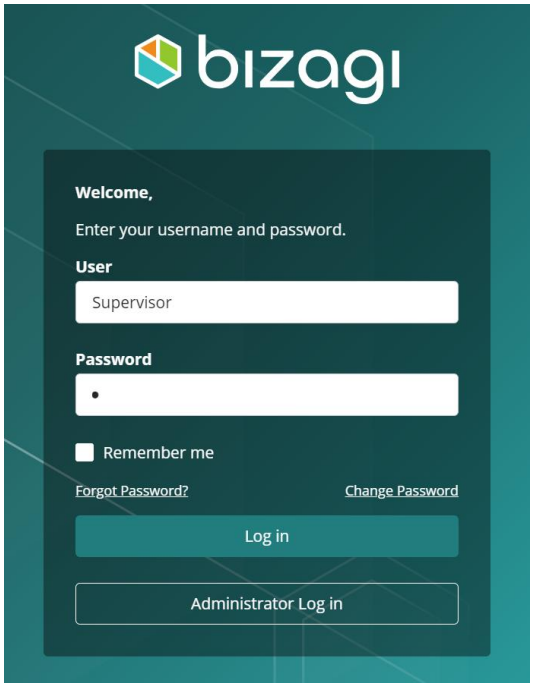

Fig. 115. Supervisor login.

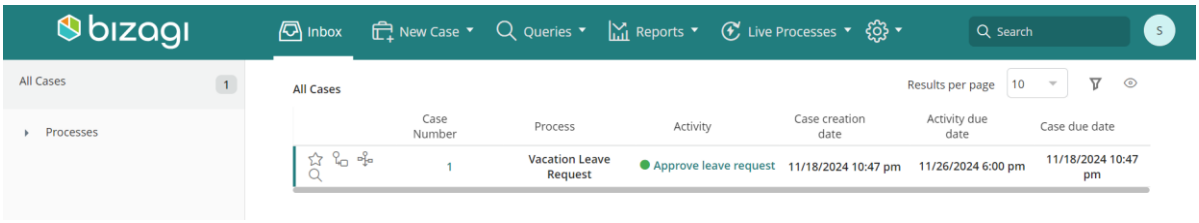

Fig. 116. Case created.

The case is displayed in the Supervisor's Inbox as a pending task. Click **Work on it** to enter the case.

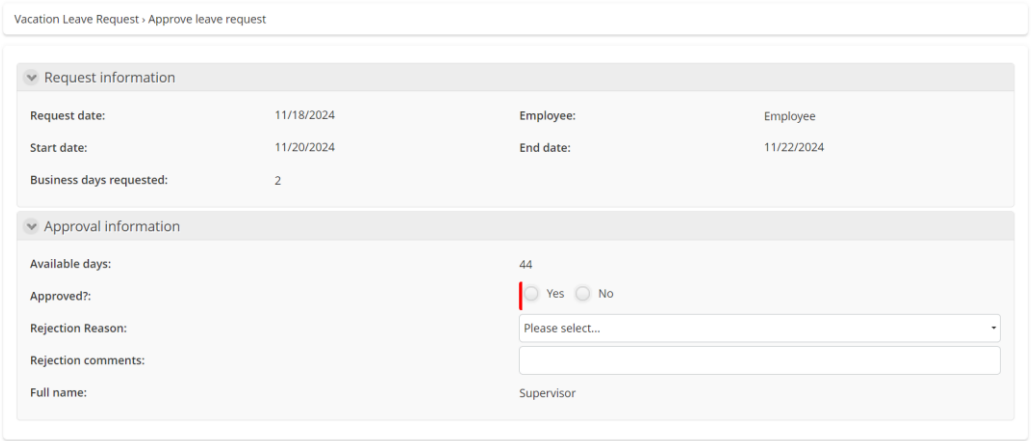

Fig. 117. Vacation Leave Request Case.

4. Fill in the information of the Activity; approve the request and click **Next**.

Copyright © 2024 Bizagi

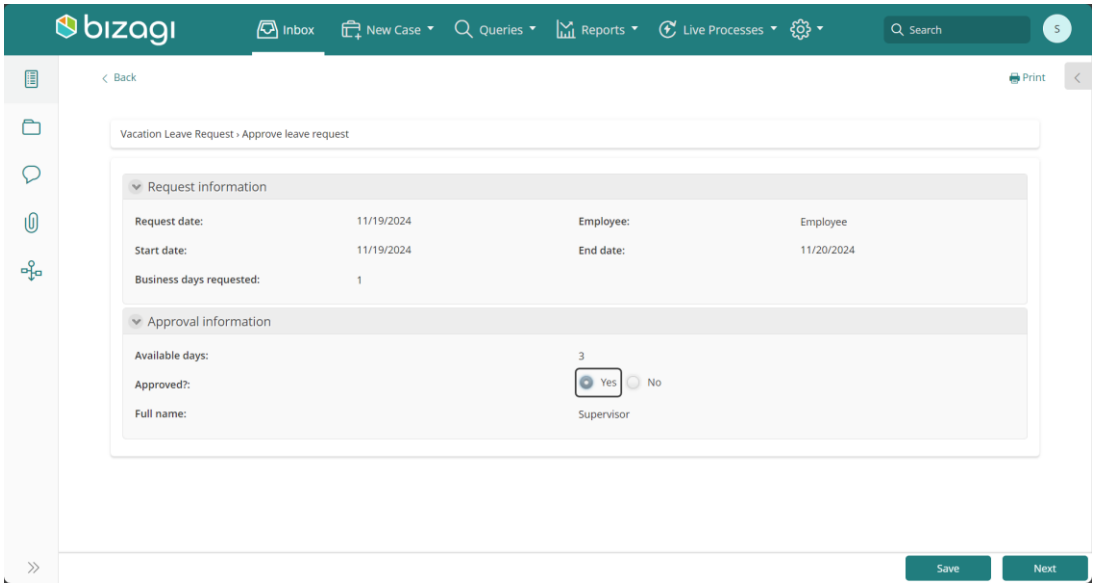

Fig. 118. Vacation Leave Request Case.

5. Log in again with the *Assistant* user.

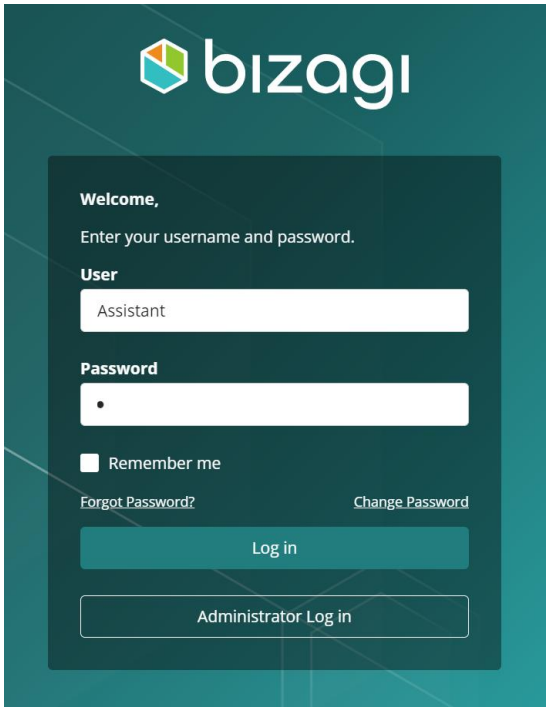

Fig. 119. Assistant login.

The *Register vacation Leave* Activity is shown.

Copyright © 2024 Bizagi

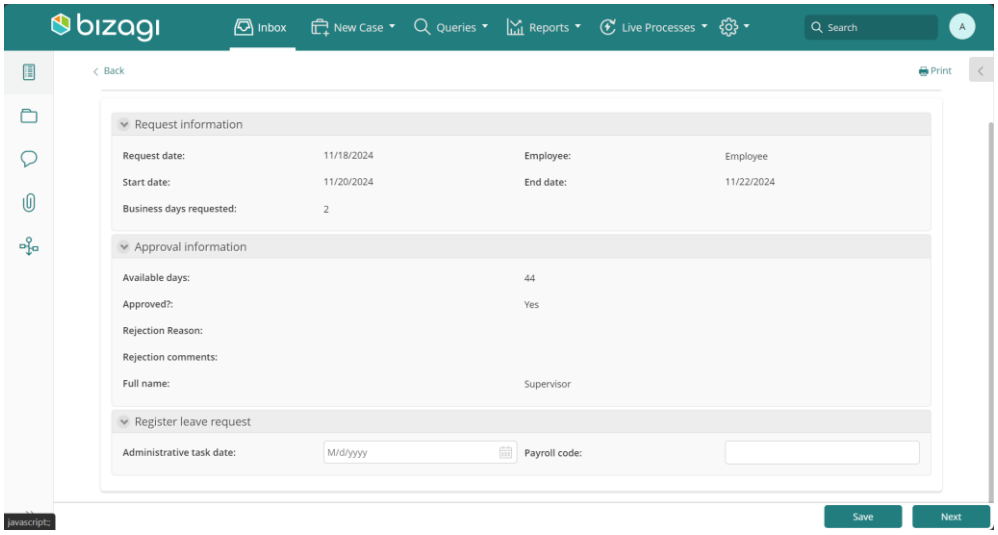

Fig. 120. Vacation Leave Request Case.

If the request was not approved, then the *Inform Request Rejection* screen will be displayed to the Employee user.

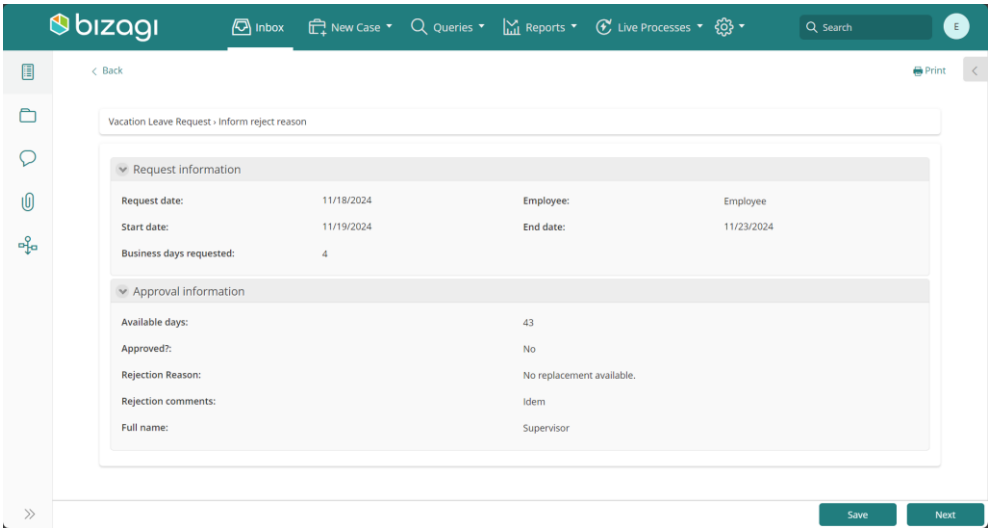

Fig. 121. Vacation Leave Request Case.

Improving the work portal

Bizagi allows the modification of the controls' appearance within the forms to achieve the look you desire.

Bizagi also offers a set of tools, that allow validating the information entered to ensure that the data entered by end users is adequate for each Activity and fulfils the different business conditions.

For this workshop we will show how to improve the user interface.

The *Rejected Reason* in the *Approve leave request* Activity should be displayed to the user only when the request is rejected; some Actions will be implemented in the Forms Designer to implement that functionality.

1. Go to the third step of the Process Wizard and open the form associated to the *Approve leave request* Activity.
2. Open the *Actions & Validations* option and click the **Add** button on the window displayed.

Copyright © 2024 Bizagi

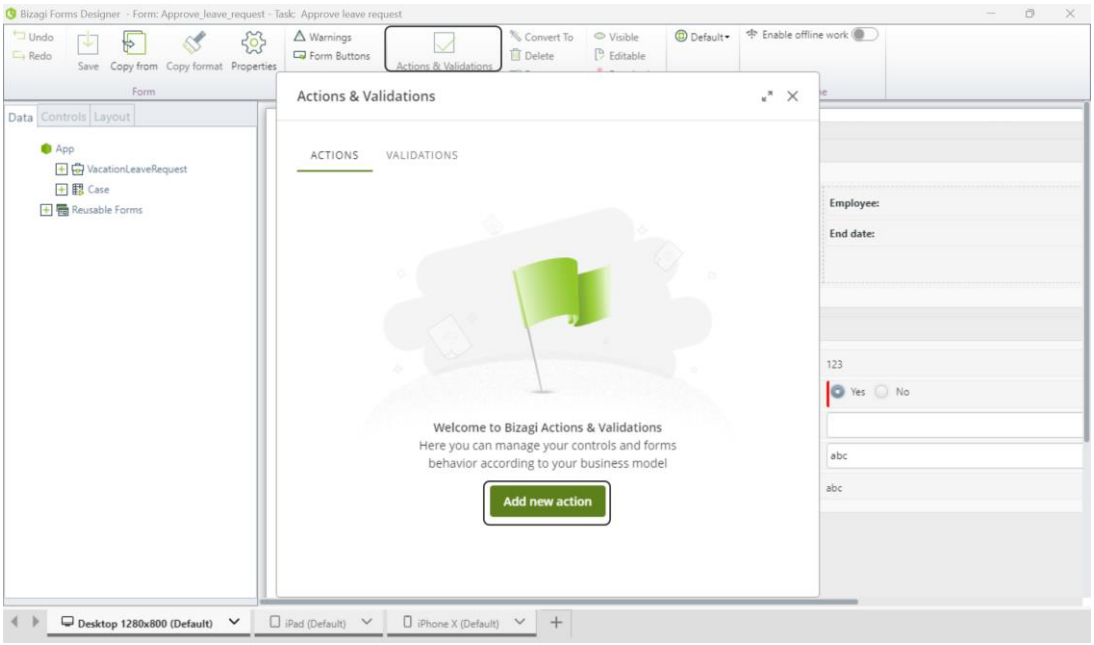

Fig. 122. Actions and Validations.

3. Select the *If* condition. Click **Add a condition**.

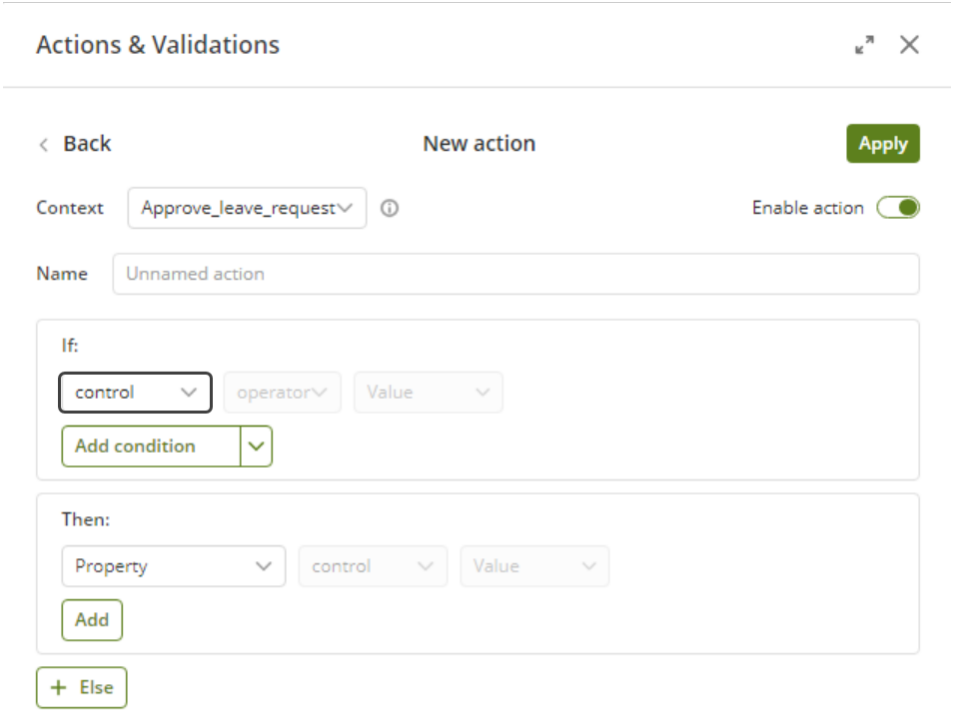

Fig. 123. Add a condition.

4. Scroll to the Control *Approved*. Then, choose the Operator *Is False*.

Copyright © 2024 Bizagi

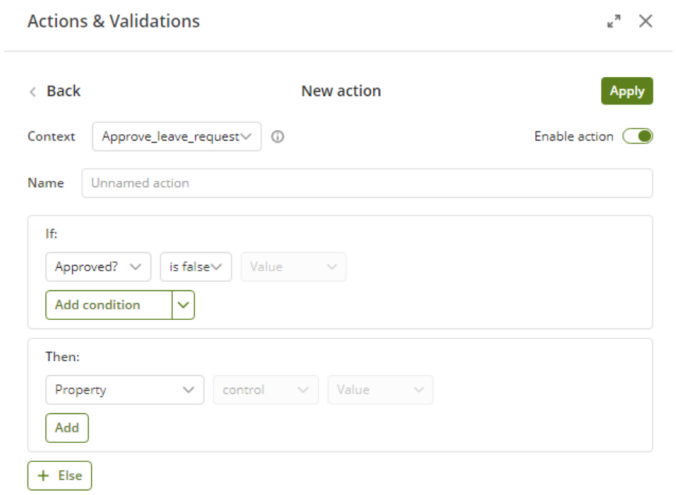

Fig. 124. Action editor.

5. Go to the *Then* section. Click **Add an Action**.

   Select the Command *Set required for*, the Control *Reject Reason* and the Argument *Yes*. This way when the Approved Control is false, the Reject Reason will be required.

   Repeat the procedure for the field *Rejection Comments*.

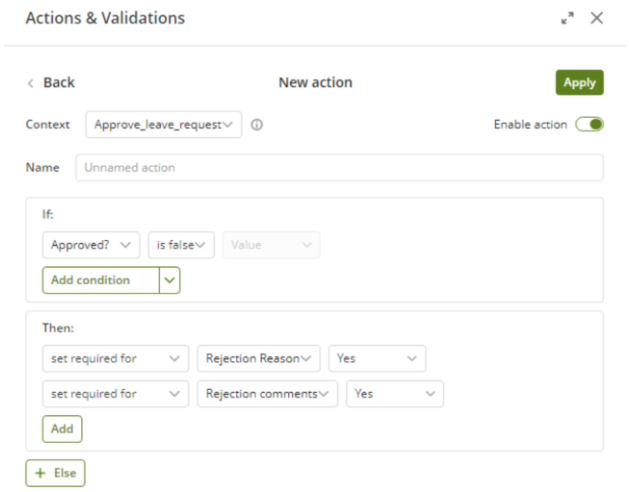

Fig. 125. Add an Action.

6. Add two more Actions: Select the Command *Change visibility for*, the Control *Reject Reason* and the Argument *Yes*. This way when the Approved Control is false, the Reject Reason will be visible.

   Repeat the procedure for the field *Rejection Comments*.

Copyright © 2024 Bizagi

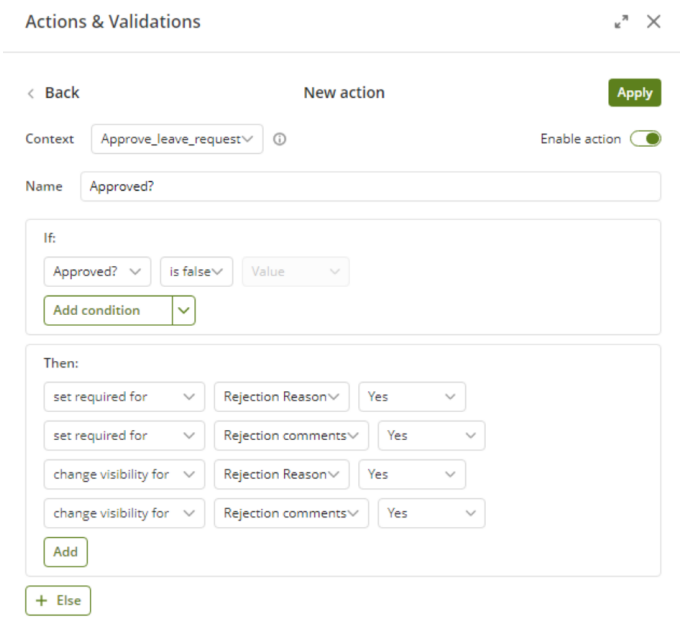

Fig. 126. Action addition.

7. Click the *Else* button.

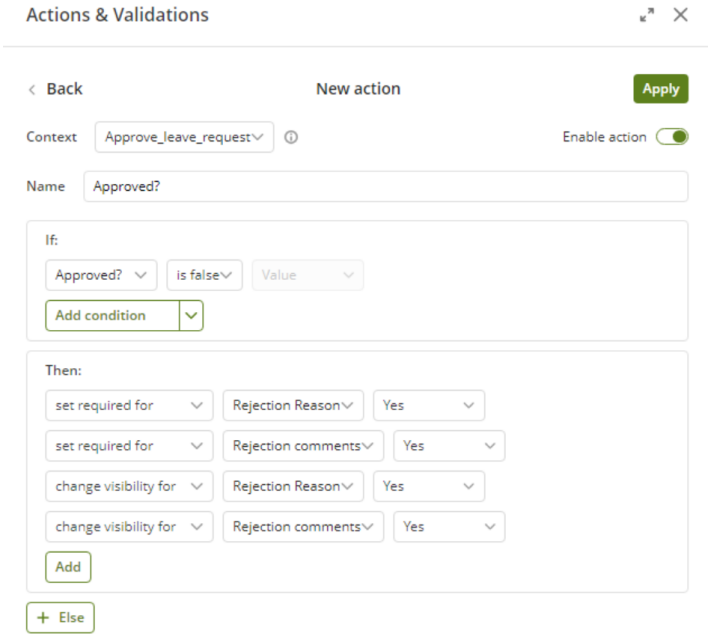

Fig. 127. Action editor.

8. Select the Command *Change visibility for*, the Control *Reject Reason* and the Argument *No*. This way when the Approved Control is Yes or not filled, the Reject Reason will be hidden.

   Repeat the procedure for the field *Rejection Comments*.

   Do the same for the *Set required for* command to avoid mandatory fields when they are no longer necessary. After pressing **OK** you need to close the windows by pressing X.

Copyright © 2024 Bizagi

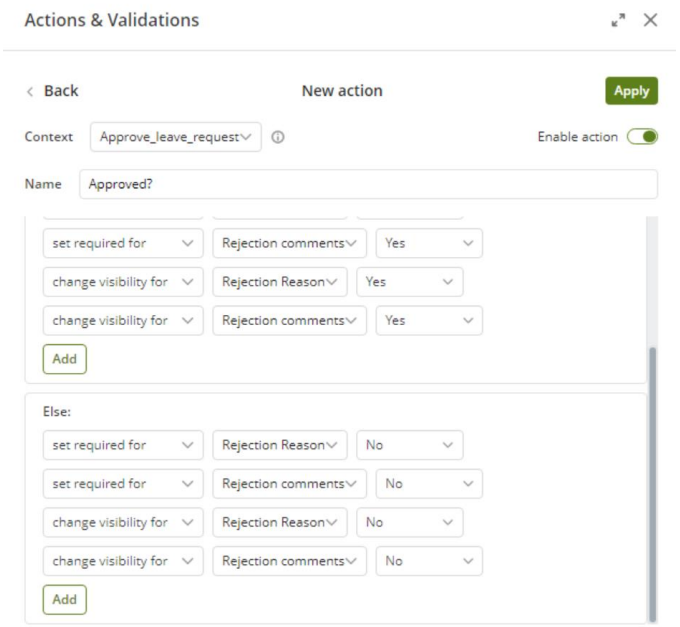

Fig. 128. Action addition.

9. The new Action for RejectedReason and RejectionComments can be observed by going to the Approve Vacation Request Task in the Work Portal and selecting *Yes* or *No* for the Field Approved. Click **OK**.

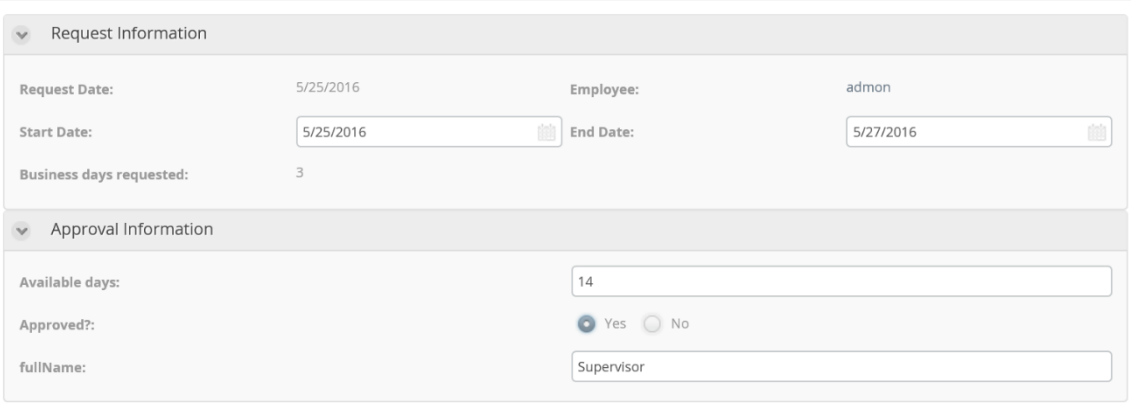

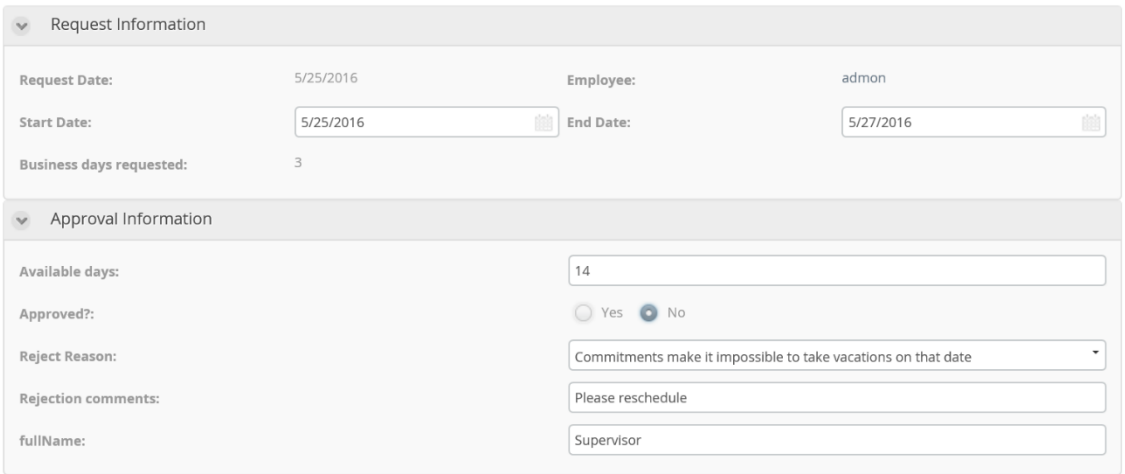

Fig. 129. New Action.

Fig. 130. Final Request.

Sending a notification (optional)

The Process could be changed to send an automatic notification for the *Inform Reject Reason* Activity, to do this the Activity needs to be converted into a service task. A SMTP (Simple Mail Transfer Protocol) Server is preconfigured in Bizagi PaaS.

1. Go to the first step of the Process Wizard and open the Process.

2. Right click the *Inform Reject Reason* Activity and select *Script Task* under the *Task type* options:

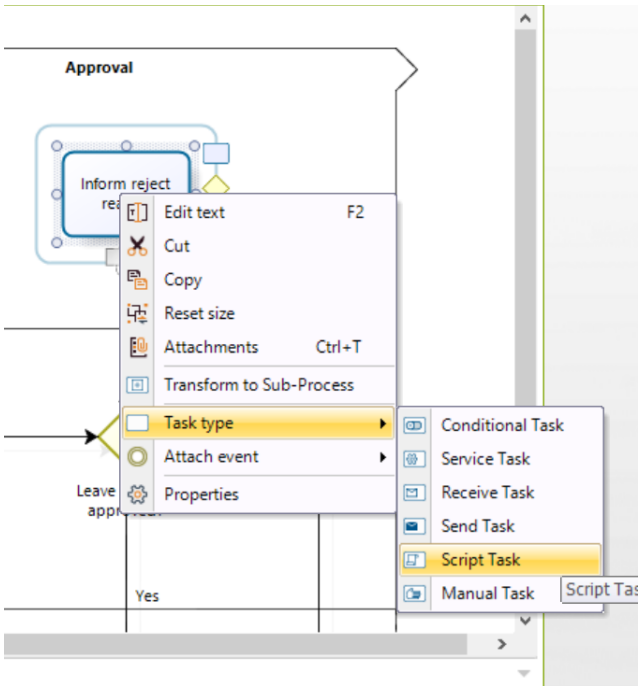

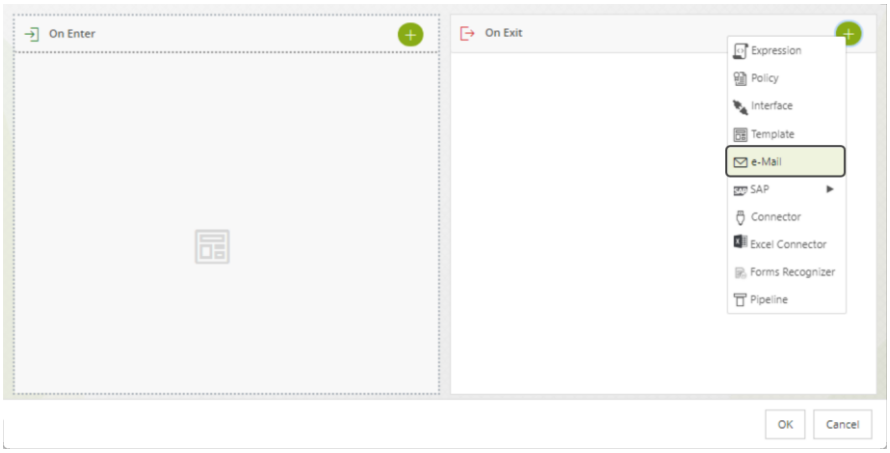

Fig. 131. Script Task selection.

3. Save the Process and close the Modeler. Go to the fourth step of the Process Wizard and select the option *Activity Actions*.
4. Click the *Inform Reject Reason* Task and Add an *On Exit – e-Mail*.

Copyright © 2024 Bizagi

Fig. 132. Mail selection.

5. On the Message Window fill the *To* field as follow *VacationLeaveRequest-Employee-ContactEmail*

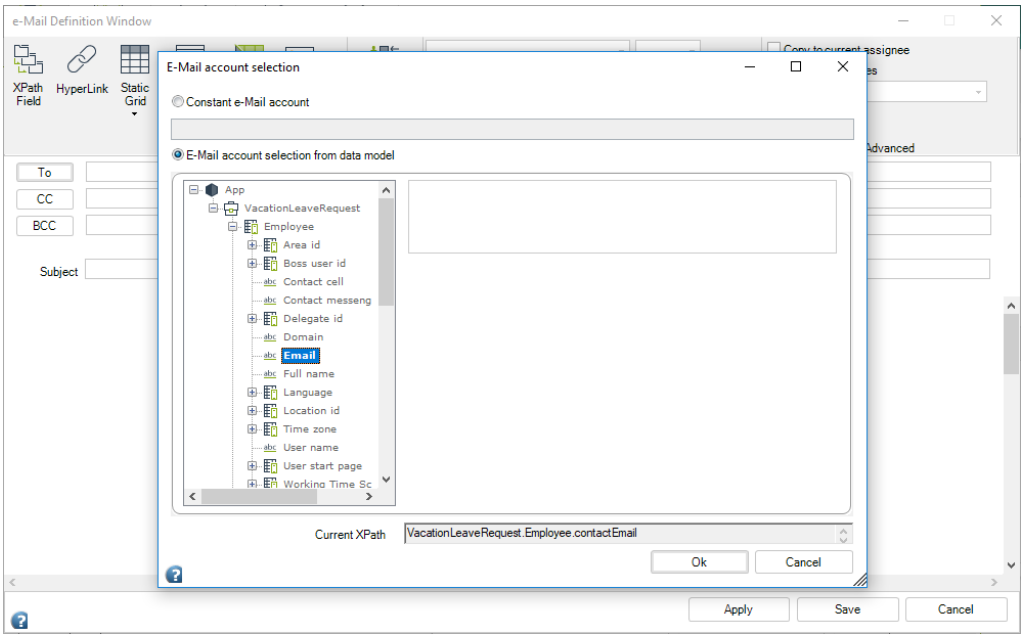

Fig. 133. Email attribute selection.

6. Include a subject as: *Your Vacation Request has been Rejected*

7. A text like this one must be included in the message:

   Dear (Applicant full name):

   We are sorry to inform you your Vacation Request has been rejected. The reason for this rejection as follow:

   (Reject Reason)

   To include the applicant's full name and Reject Reason, select the *XPath Field* option.

   Navigate in the Data Model and select the attribute. Click **OK**. The attribute is now included.

Copyright © 2024 Bizagi

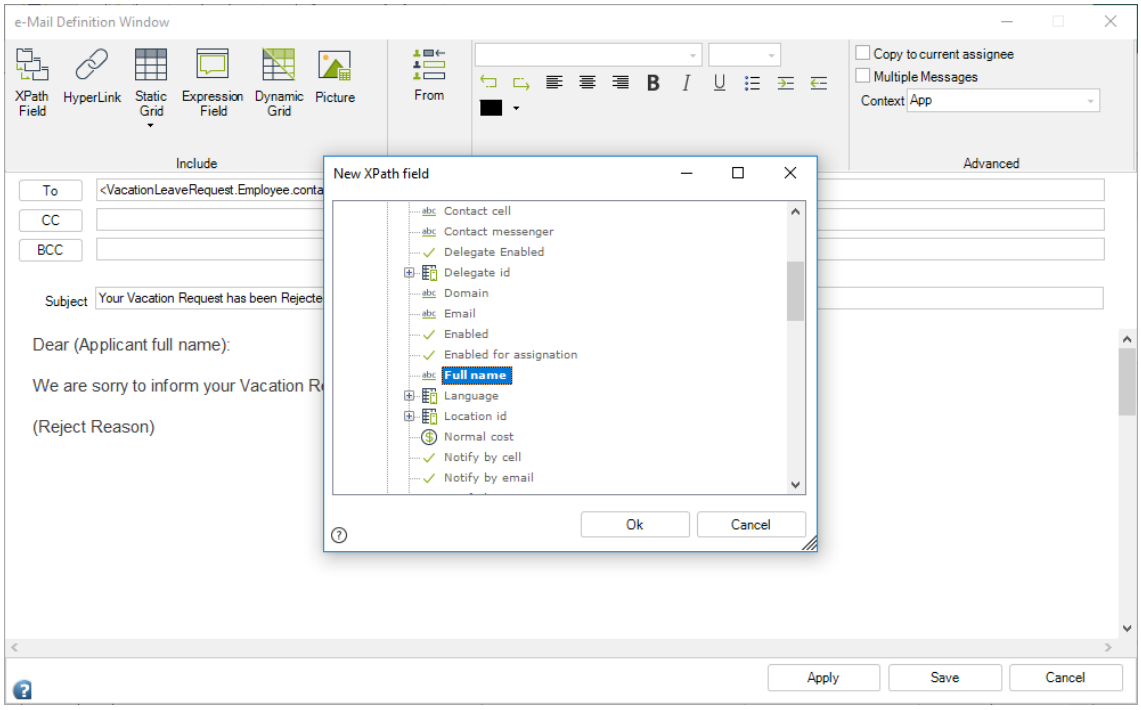

Fig. 134. Full name attribute.

Your e-mail should look like this:

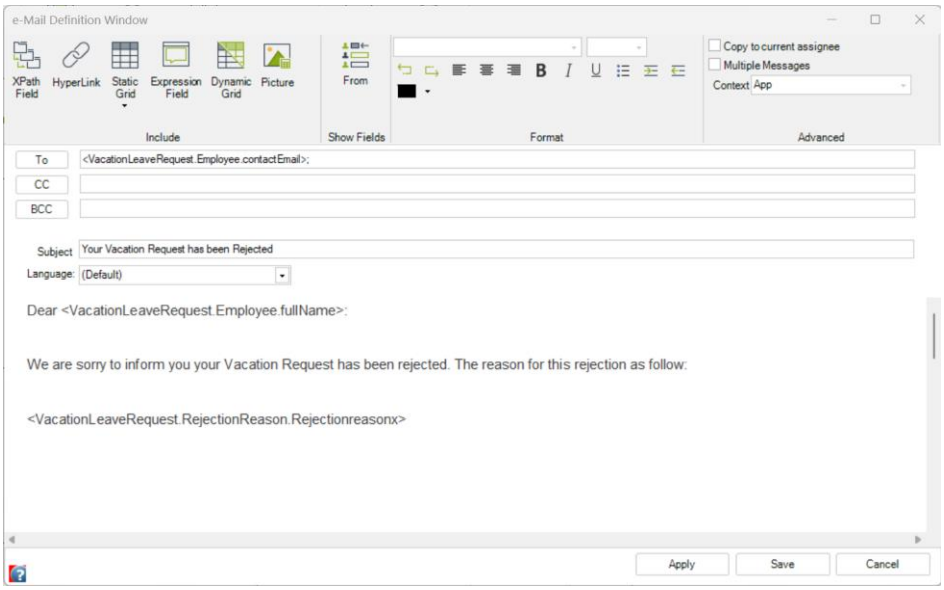

Fig. 135. Mail configuration.

8. Click **Apply** and **Save** to close the e-mail Definition Window and then **OK** in the Activity Actions Window.
9. Configure the Contact e-mails for the Employee. Go to the Work Portal, *Admin-Users*:

Copyright © 2024 Bizagi

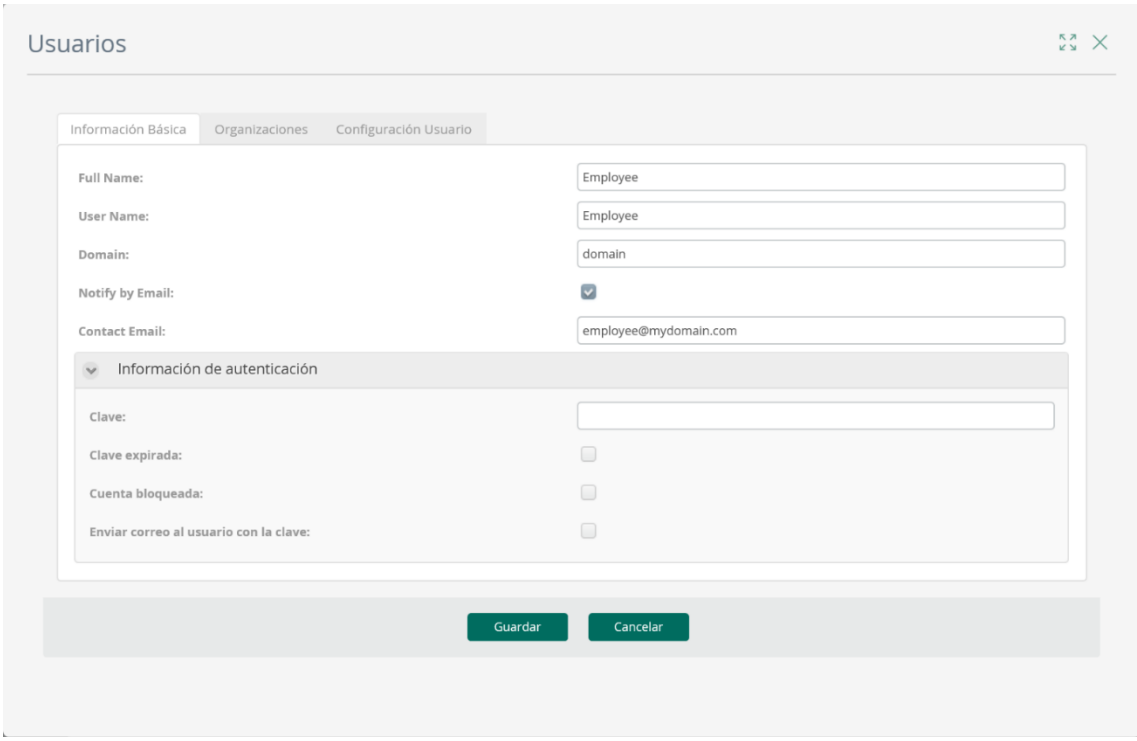

Fig. 136. User creation.

Make sure the e-mail is a valid e-mail address and click **Save**.

10. Run the Application. Start a new case and reject the request, instead of looking to a form for the *Inform Reject Reason* Activity an e-mail will be sent, and the case will be closed. The e-mail would have to look like this:

Copyright © 2024 Bizagi

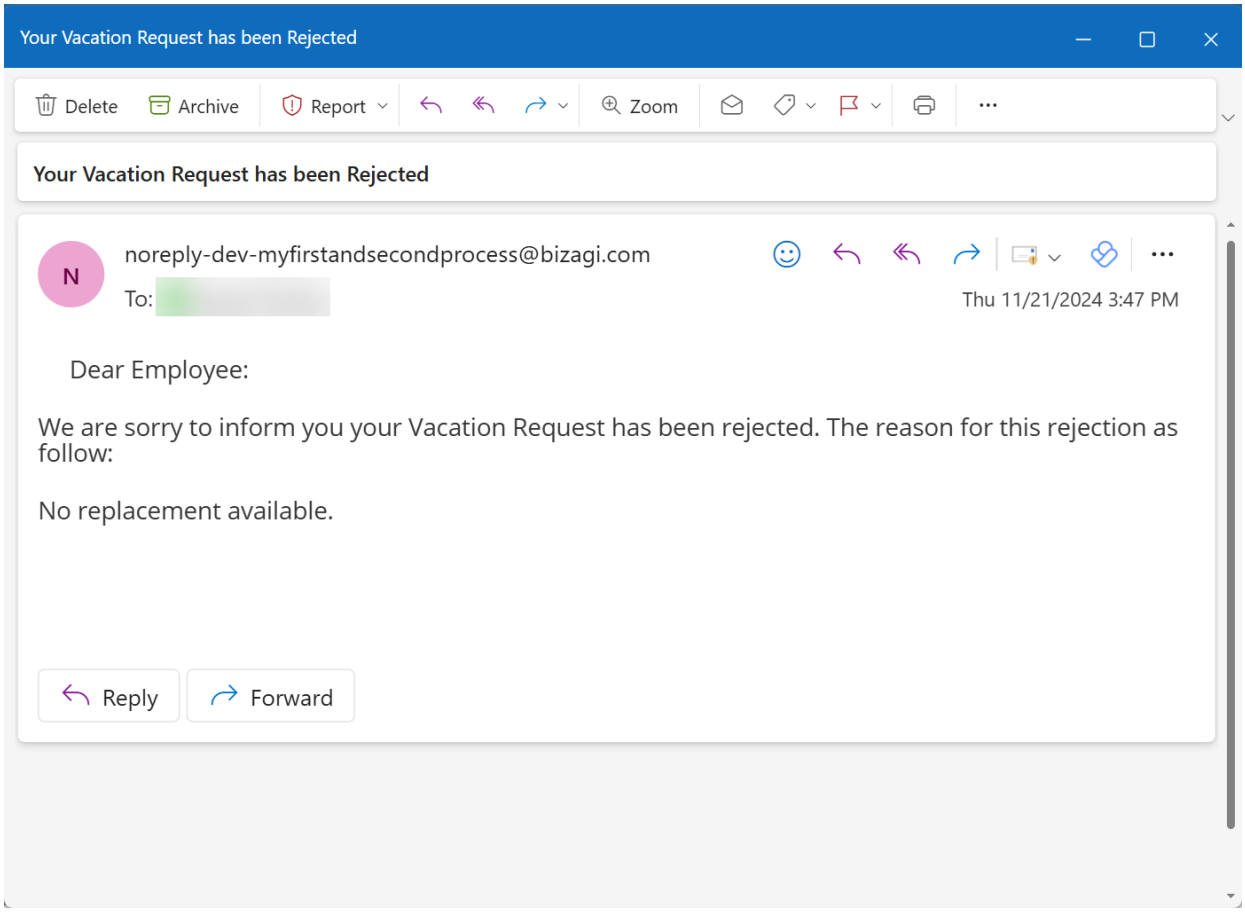

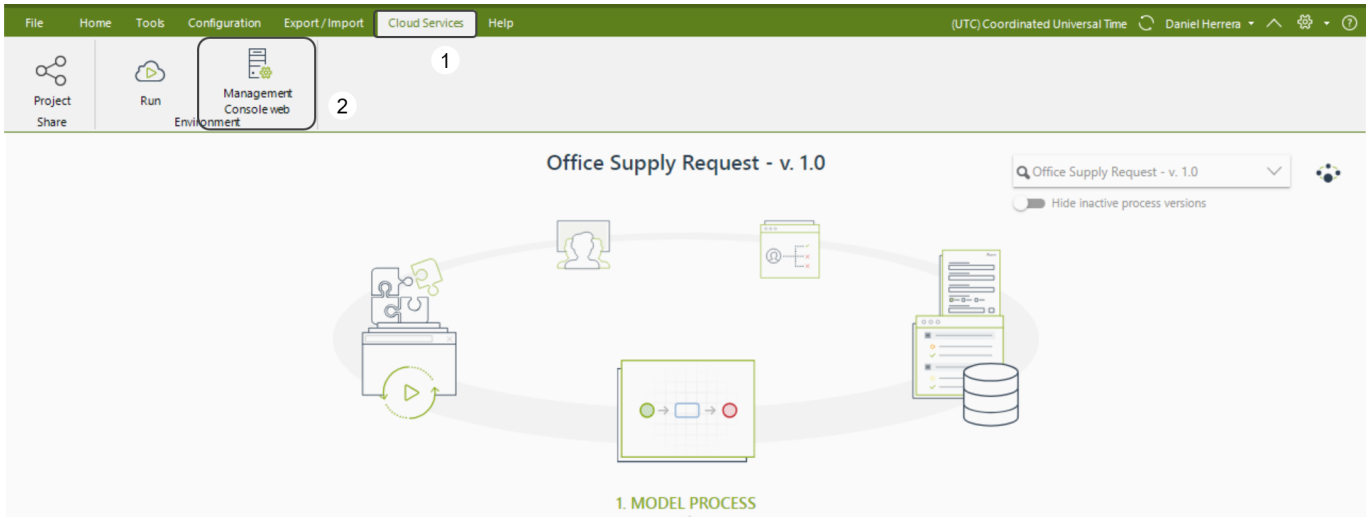

Fig. 137. Email test.

Ensure that the **Enable Email** checkbox is selected for this test to function properly.

To verify that the **Enable Email** checkbox is selected, follow these steps:

1. In the **Bizagi Studio** window, click on **Cloud Services** in the top menu bar.
2. Select the **Management Console Web** button.
3. Once the Management Console page opens, navigate to the **Environment** section.
4. Under the **Options** section, ensure the **Enable Email** checkbox is selected.

Conclusion

In this workshop you learned to diagram the flow of Processes, the design and creation of its data structure, the definition of business rules, and configuration of assignment rules for each one of the manual Activities and to connect with other applications via web. The result was an easy-to-use Work Portal, which shows accurately the model created in Bizagi Studio; this result could be achieved because of the data driven concept of Bizagi.

Thank you for completing this workshop, for Bizagi it has been a pleasure to show you why we are the most agile solution to automate Process.

We hope that your experience with Bizagi has been satisfactory; If you have any questions or comments, Feel free to Contact us.

If you need to review the solution of the workshop, you can open Bizagi and the project will be available.

Next steps

1. Check our documentation at https://help.bizagi.com/platform/en
2. Do the Second Workshop for Product Evaluation to learn more advanced features.

Troubleshooting

FAQs

This section deals with the most frequent questions arising from this workshop exercise:

1. I added the wrong shape. How do I delete it?

   Select the shape and press the delete key. A Lane can be deleted simply by right-clicking the name and selecting the *Delete* option. Before deleting the lane, there should be no shapes associated with it. To delete a Phase, select the *Delete* option that appears when you right-click the top of the Phase. Remember that to be able to delete a Phase, there should be no associated shapes to the left of said phase.

2. I forgot to uncheck the checkboxes when I added the user.

   When logging into the Work Portal, you will be asked to change your password. This may result in an authentication error. Refer to question 4 to resolve the matter.

3. I can't log in with the user I created. I get an authentication error.

   For this workshop, you need to bypass the authentication validation. In the Welcome page, select the Administrator Login at the bottom right. In the new window, leave the Password blank and click Login. The Work Portal will run with Bizagi's default-created user: **admon**.

   To edit the user, select *Admin-Users* and deselect all checkboxes in the Basic Information tab: *Expired Password*, *Locked Account* and *Send Mail with Password to User*. Check the Password field is filled. Doing so will bypass authentication and SMTP server validations.

4. I still can´t login, users are all blocked.

   Open Bizagi Studio and click the Expert icon located at the upper left corner. This will enable the Modules view, which is an advanced view. Go to Security module and locate Enable Quick Login as shown in the image below.

Copyright © 2024 Bizagi

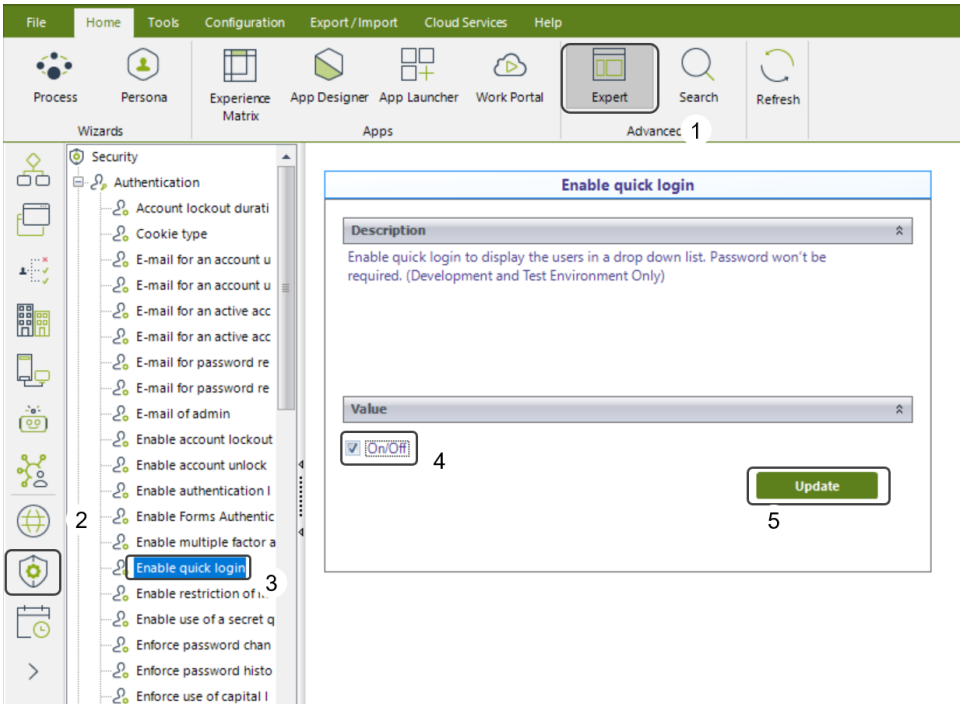

Fig. 140. Expert view.

Click **Update**.

When Quick Login is enabled you will not have to enter the user's password in the Work Portal, just select the user you want to log in with. Click Run to test the Work Portal.

5. I do not see the expected Activity when logging into the Work Portal.

   Ensure you have assigned the correct Performer to each one of the Process activities. Take care to login with the appropriate user.
